help through the co-op program compared to ten percent of the whites. When the three school-associated responses were combined, we found a significant correlation (r=.13) between race and school help; that is, blacks were more likely to report getting first job help from a school source. No significant difference was noted in any of the responses for sex.

TABLE 79

SOURCE OF HELP TO RESPONDENT IN GETTING FIRST JOB, BY SEX AND RACE

	M	F	W	B	T
I got the job on my own	47%	48%	48%	41%	47%
I got help from parents, relative or friend	37	31	37	22	33
I got help through the CO-OP program	11	15	10	24	14
I got help through the Vocational School	4	2	2	6	3
I got help through high school teacher or counselor	1	4	2	8	4
Total	100%	100%	99%	99%	101%
Weighted Base	(262)	(388)	(457)	(143)	(656)

AVERAGE HOURS WORKED PER WEEK. Table 80 shows no major difference in hours worked per week for blacks and whites, although more blacks reported working over forty hours per week. For males and females however, the differences are large. Females were far more likely to work less than forty hours per week on their job (39 percent) than were males (15 percent); males were more likely to work forty or more hours per week. The number of hours worked is significantly correlated with sex (r=.27).

TABLE 80

AVERAGE NUMBER OF HOURS WORKED PER WEEK BY RESPONDENTS ON CURRENT OR MOST RECENT JOB BY SEX AND RACE

	M	F	W	B	T
39 or less hours	15%	39%	29%	29%	29%
40 hours	53	45	49	43	49
41 or more hours	32	17	23	28	23
Total	100%	101%	101%	100%	101%
Weighted Base	(302)	(431)	(497)	(175)	(738)

INCOME ON CURRENT OR MOST RECENT JOB. The three tables follwing this narrative all relate to the respondents income on their current or most recent job. Table 81 shows that males and whites tended to be associated with higher income than females and blacks. Twice as many

males (72 percent) as females (36 percent) were found in the uppper half of the income distribution for their most recent job. Whites were more often in the upper half than blacks (55 percent vs. 45 percent). These findings are statistically significant; higher income is associated with males (r=.35) and whites r=.09).

Table 82 indicates how the graduates rated their wages. Overall, there is no significant relationship between race and perception of adequacy of wages. There is a slight relationship between sex and ratings; males tended to perceive their wages as better than did females. Over one-fourth (27 percent) of the males said their earnings were "enough to have extras and save some", but only nine percent of the females said this. This significant relationship (r=.19) is not surprising in light of the generally higher earnings of males in our study.

Our third table, Table 83, reveals some interesting responses concerning the graduates' perceptions of their chances for increased wages. One-half (50 percent) of the blacks rated their chances as "fair" compared to only 28 percent of the whites. Whites were slightly less optimistic and rated their chances as "poor" or "none at all" more often than blacks. Males were more positive than females about their chances for increased wages. Approximately one-sixth (16 percent) of the males rated their chances as "excellent" and another 30 percent said they were "good". These more optimistic ratings are significantly related with sex (r=.20); males were more

likely then females to believe they had a chance for increased wages.

TABLE 81

LEVEL OF RESPONDENTS CURRENT INCOME
BY SEX AND RACE

Weighted Base	(261)	(379)	(431)	(147)	(645)

TABLE 82

RESPONDENTS' PERCEPTIONS OF ADEQUACY OF WAGES
BY SEX AND RACE

	M	F	W	B	T
Impossible to live on	6%	14%	10%	13%	10%
Barely enough to meet needs	26	28	26	24	27
Enough to live comfortable	30	32	31	34	31
Enough to be able to have some extras	12	18	14	16	15
Enough to have extras and save some	27	9	19	14	17
Total	101%	101%	100%	101%	100%
Weighted Base	(291)	(392)	(469)	(153)	(689)

TABLE 83

RESPONDENTS' PERCEPTION OF CHANCE FOR INCREASED WAGES BY SEX AND RACE

	M	F	W	B	T
None at all	5%	19%	16%	6%	14%
Poor	20	19	22	9	20
Fair	30	36	28	50	33
Good	30	20	23	27	24
Excellent	16	5	12	8	10
Total	101%	99%	101%	100%	101%
Weighted Base	(286)	(382)	(464)	(148)	(673)

JOB SATISFACTION. Females and whites were more satisfied with their current or most recrnt job than were males and blacks. Although more males said they were very satisfied (26 percent), more also said they were dissatisfied (15 percent). More females reported they were satisfied with their job (47 percent) than males (30 percent). Combining the two satisfaction responses and the two dissatisfaction responses the relationship between satisfaction and females becomes significant (r=.19). Three times more whites than blacks reported they were very satisfied with their job (25 percent vs. 8 percent). About the same number of blacks and whites said they were satisfied at work.

Interestingly, however, when job satisfaction is probed more extensively, males continued to report themselves as very satisfied at a higher rate than do females on seven of the eleven items (data not presented her). Females registered stronger dissatisfaction than males with three items: wages, fringe benefits, and promotion possibilities. Their dissatisfaction significantly correlates with these three areas (wages, r=.06; fringe benefits, r=.29; and promotion possibilities, r=.23). The relationship of blacks and whites to job satisfaction holds for each of the eleven satisfaction iems, in that whites were more often satisfied.

TABLE 84

RESPONDENTS SATISFACTION WITH MOST RECENT JOB
BY SEX AND RACE

	M	F	W	B	T
Very satisfied	26%	18%	25%	8%	22%
Satisfied	30	47	40	41	39
Neither satisfied nor dissatisfied	28	29	26	38	29
Dissatisfied	15	4	8	13	9
Very dissatisfied	1	2	2	0	1
Total	100%	100%	101%	100%	100%
Weighted Base	(289)	(384)	(461)	(150)	(678)

SECURITY OF CURRENT JOB. As the figures in Table 85 indicate, there were no major response differences in general for sex or race. Blacks indicated to a greater extent that their current job was secure and was theirs for as long as they wanted it (48 percent vs. 37 percent for whites). Although not significant, fewer females (4 percent) than males (10 percent) said they had never thought about the security of their job.

TABLE 85

SECURITY OF CURRENT JOB BY SEX AND RACE

	M	F	W	B	T
It will end soon, forcing me to change positions	1%	0%	1%	0%	0%
It's one I can depend on for several years	22	26	24	23	25
It will be mine for as long as I want it	41	39	37	48	39
The job is uncertain, I am unsure about the future	27	31	30	25	29
I never thought about it	10	4	8	5	7
Total	101%	100%	100%	101%	100%
Weighted Base	(220)	(247)	(324)	(112)	(472)

RESPONDENTS' PRESENT SITUATION. Males and whites were slightly more likely than females and blacks to be working full-time (see Table 86). Males were also slightly more likely to be going to school full-time, or to be in the military service. Females were more likely to report that they were working part-time or were unemployed. Greater number of females also reported that they were either looking (14 percent) or not looking for work (13 percent). When the items indicating employment (a, b, e and f) are combined and compared to those indicating unemployment (g and h) the relationship between sex and employment becomes significant (r=.24); males are most likely to be working.

TABLE 86

RESPONDENTS' PRESENT SITUATION REGARDING WORK AND SCHOOL BY SEX AND RACE

	M	F	W	B	T
Working full time (more than 30 hours per week)	54%	45%	51%	44%	50%
Working part-time (less than 30 hours per week)	2	10	6	9	6
Not working-going to school full time	15	9	10	14	11
Not working-going to school part-time	0	0	0	0	0
Working and going to school	15	9	10	14	11
In military service (no civilian job)	7	0	3	4	3
Unemployed, looking for work	8	14	11	10	12
Unemployed, not looking for work.	0	13	9	6	8
Total	101%	100%	100%	101%	101%
Weighted Base	(282)	(391)	(464)	(158)	(675)

MARITAL AND PARENTHOOD STATUS. More blacks (78 percent) and males (78 percent) were still single (never married) than were whites and females (see Table 87). Very few of the respondents had been divorced and none were widowed. These data are not surprising in light of the traditional tendency for females to marry at a younger age than males. Females in this study married significantly sooner than males (r=.16).

TABLE 87

PRESENT MARITAL STATUS OF RESPONDENTS
BY SEX AND RACE

	M	F	W	B	T
Single, never married	78%	62%	64%	78%	69%
Married	21	36	34	22	31
Divorced	0	1	1	0	1
Widowed	0	0	0	0	0
Total	99%	99%	99%	100%	101%
Weighted Base	(286)	(431)	(491)	(170)	(714)

As Table 88 shows, three-in-ten (30 percent) of the 1972 graduates were already parents. Females and blacks were more often parents than males and whites; almost twice as many females were parents as were males (37 percent vs. 19 percent). The correlation between sex and parenthood is statistically significant (r=.19).

TABLE 88

PARENTHOOD STATUS OF RESPONDENTS BY SEX AND RACE

	M	F	W	B	T
Yes [parent]	19%	37%	27%	37%	30%
No [not a parent]	81	63	73	63	70
Total	100%	100%	100%	100%	100%
Weighted Base	(276)	(428)	(476)	(170)	(709)

DIFFERENTIAL APTITUDE TEST SCORES. No significant difference was found for three of the nine scores on this test when examined by sex (see Table 89). Three scores were slightly related to sex; males had higher scores than females on three tests: Mechanical Reasoning (r=.07); Space Relations (r=.08); and Grammar (r=.10). All percentile scores were significantly correlated with race; blacks tended to have significantly lower scores than whites.

TABLE 89

SIGNIFICANCE OF DAT PERCENTILE SCORES BY SEX AND RACE

	Sex*	Race**
Verbal Reasoning	n.s.	-.28
Numerical Ability	n.s.	-.23
VR and NA (total)	n.s.	-.26
Abstract Reasoning	n.s.	-.29
Clerical Speed and Accuracy	n.s.	-.28
Mechanical Reasoning	.07	-.29
Space Relations	.08	-.23
Spelling	n.s.	-.12
Grammar	.10	-.22

*Males; **Blacks

GRADE POINT AVERAGE AND RANK IN CLASS. Females had significantly higher grade point averages than males (r=.24), and also ranked significantly higher in their graduating classes (r=.19). There was a very slight correlation between race and grade point average (r=.07) with blacks tending to have slightly lower g.p.a.'s than whites. The relationship between race and rank in class was more pronounced; blacks were ranked significantly lower (r=.17) than whites.

DATA COLLECTION INSTRUMENTS

Pontiac Northern Senior High School

1051 ARLENE STREET, PONTIAC, MICHIGAN 48055 Phone 338-4505

DANA P. WHITMER, SUPERINTENDENT

Dear Graduate:

As a former student of Pontiac Northern High School you are an important person to us here at Northern. We like to know where our students are and how they are getting along. Perhaps you have been contacted before with questions about your activities since leaving high school. Once again we are asking your help.

The Research and Evaluation Department of the Pontiac Schools is conducting a study of co-operative work experience, vocational training, and academic programs to find out how well they help students to become better and more satisfied workers in their employment after high school. In such a study we need to know the reactions of students who did and did not participate in co-operative, vocational, general, and academic programs while they were in high school

You will be receiving a questionnaire and a stamped, self-addressed return envelope. Your help in completing and returning the questionnaire would be very much appreciated.

We thought the enclosed Northern athletic schedule and Polaris might be of interest to you.

Sincerely yours,

Edward G. Dauw

FOLLOW-UP SURVEY OF 1972 GRADUATES

Dear 1972 Pontiac Graduate:

As you were informed by a letter from your high school principal, the Research and Evaluation Department of the Pontiac Schools is conducting a follow-up survey of 1972 Pontiac graduates. Approximately one-third of the 1972 Pontiac graduating class was selected to participate in the follow-up survey. Student names were randomly selected from the 1972 Commencement and 1972 Cooperative Education lists of both Pontiac high schools.

The general purposes of the Follow-Up Survey are to:

1. Determine what Pontiac graduates have been doing in terms of employment.

2. Determine their satisfactions with employment and high school programs.

3. Determine views of Pontiac graduates on possible improvements of school programs.

4. Determine the relationship of high school program costs and their benefits to Pontiac graduates.

Enclosed are the Questionnaire, a pencil, and a stamped, self-addressed envelope for your convenience in returning the survey. Please return the completed questionnaire as soon as possible. Your help and cooperation with this survey will be appreciated. The information will be used for educational purposes only, and the privacy of information you provide will be maintained.

If you have any questions or comments regarding the Follow-Up Survey or the Questionnaire, please contact Stu Packard, Jean Rosenthal, or Tom Shara at 857-8328.

Sincerely yours,

Stuart Packard

QUESTIONNAIRE FOR FOLLOW-UP OF 1972 PONTIAC GRADUATES

INFORMATION IS FOR EDUCATIONAL RESEARCH ONLY - ALL INFORMATION IS CONFIDENTIAL

PLEASE ANSWER ALL QUESTIONS WHICH APPLY TO YOU - READ ALL ALTERNATIVES BEFORE ANSWERING

RITE IN ANSWERS WHEN APPROPRIATE or CIRCLE ANSWERS WHEN APPROPRIATE

TABULATION ONLY Begin Deck 1

EXAMPLES FOR ANSWERING

1. Are you currently employed full time or part-time? (PLEASE CIRCLE)

   Yes . . . . . (1)

   No 2

2. What is the name or title of your job? (PLEASE WRITE IN)

   Waitress

   (PLEASE WRITE IN)

1-3/

. D you take any vocational, Co-Op, or industrial arts courses in high school?(EXAMPLES:automotives, business, retailing)

(PLEASE CIRCLE)

Yes, I took many courses in vocational education, Co-Op, or industrial arts.(GO TO QUESTION 2). . . . 1

Yes, I took some vocational, Co-Op, or industrial arts courses even though my program was General or College Prep.(GO TO QUESTION 2). 2

, I did not take any vocational education, Co-Op, or industrial arts courses.(GO TO QUESTION 6) . . . 3

4/

. you took vocational, Co-Op, or industrial arts courses, why did you select the courses you did? (CIRCLE ALL THAT APPLY)

wanted to learn more about it because of my interest or hobbies 1

I wanted to do that type of work 2

bs in that field offered good pay and working conditions 3

My parents advised me to take them 4

5/

counselor or teacher suggested I take them . . . 5

took vocational courses because my friends took them 6

preferred vocational courses to other available courses 7

Other reasons(PLEASE WRITE IN)_____ 8

. At the time you selected your high school vocational courses, did you plan to go to work in that field after high school?

s, I definitely planned to work in that field . . 1

Yes, but I was not really certain 2

, but I was not really certain 3

6/

, I definitely did not plan to work in that field.4

I really did not know what I was going to do after graduation. 5

. If you planned to get a full time job after your high school graduation, what kind of job did you want?

did not plan to get a job after graduation. . . . 1 (PLEASE GO TO QUESTION 6)

I planned to get a job directly related to the vocational courses I studied in school. 2

7/

planned to get a job slightly related to the vocational courses I studied in school. 3

I planned to get a job not related to the vocational courses I studied in school 4

5. How important were your vocational, Co-Op, or industrial arts courses in high school for your career choice? Did these courses confirm your job choice, change your job choice or have no effect on your job choice?

   Vocational education courses confirmed my job choice 1

   Vocational education courses changed my job choice 2

   Vocational education courses had no effect on my job choice 3

8/

6. At the time you entered the 10th grade, what career or job did you want? (PLEASE WRITE IN)

   _____

9-10/

7. When you graduated from high school, what kind of job did you want? (PLEASE WRITE IN)

   _____

11-12/

8. How important was each of the following in your choice of what to do after high school graduation. (CIRCLE ONE ANSWER FOR EACH ITEM)

ITEM	VERY IMPORTANT	SOMEWHAT IMPORTANT	NOT IMPORTANT	DOES NOT APPLY	
a. Parents or relatives	1	2	3	4	13/
b. Friends	1	2	3	4	14/
c. CO-OP teacher or employer	1	2	3	4	13/
d. High school counselor or teacher	1	2	3	4	16/
e. Work experience in high school	1	2	3	4	17/
f. NEOVEC teacher or counselor	1	2	3	4	18/
g. School subjects	1	2	3	4	19/
h. Other (PLEASE WRITE IN) _____	1	2	3	4	20/

9. Were there areas or courses that you wanted in high school which were not offered by the school?

   No 1

   Yes 2

   IF YES, what were they. (PLEASE WRITE IN)

   _____ 22-23/

   _____ 24-25/

   _____ 26-27/

21/

10. Were you employed in any job(s) during high school which lasted one month or long?

    Yes . . . . . (GO TO QUESTION 11) 1

    No . . . . . (GO TO QUESTION 12) 2

28/

12. Please complete the following High School Job History Chart for all your high school jobs which lasted one month or longer. (PLEASE WRITE IN ANSWER FOR EACH JOB HELD. ANSWERS FOR COLUMNS APPEAR IN THE BOX AT THE TOP OF THE COLUMN.)

TABULATION ONLY

HIGH SCHOOL JOB HISTORY CHART

1 Name, title or description of job held.	2 Was job Work Study, CO-OP, neither, or don't know?	3 Year Held	4 Was job directly related, slightly related, not related or don't know to your school course of study
EXAMPLE Ato Mechanic	work study	9th	directly
1.			
2.			
3.			
4.			
5.			
6.			

13. Have you been employed either full-time or part-time since high school graduation?

Yes . . . .(IF YES, ANSWER QUESTIONS 13 TO 31). . 1

No . . . .(IF NO, GO TO QUESTION 28) 2 29/

14. How soon after graduation did you get your first job?

I continued a job I already had 1

I started immediately after graduation 2

I started between 1 and 2 months after graduation 3 30/

I started between 3 and 6 months after graduation 4

I started more than 7 months after graduation . . 5

16. Did you have a parent, relative, or friend in the same line of work that you entered?

No 1

Yes, parent or relative 2 31/

Yes, friend 3

15. What was the name or title of your first job? (PLEASE WRITE IN)

_____ 32-33/

(Name of Job or Title of Job)

16. What was the name of the company or name of the employer of your first job? (PLEASE WRITE IN)

_____ 34-35/

(Name of Company or Employer)

17. About how much money did you earn per hour on your first job? (PLEASE WRITE IN)

_____ 36-38/

(Wages per hour)

18. How did you get your first job?(CIRCLE ALL THAT APPLY)

TABULATION ONLY

I got the job on my own 1

I got help from parents, relative, or friend . . 2

I got help through the CO-OP program 3 39/

I got help through the Vocational School 4

I got help through high school teacher or counselor 5

Other sources(PLEASE WRITE IN)_____

POST-HIGH SCHOOL JOB HISTORY CHART

19. PLEASE COMPLETE THE FOLLOWING INFORMATION FOR ALL JOBS HELD SINCE GRADUATION.(START WITH PRESENT OR MOST RECENT JOB)

Name, Title, or Job Description	Dates Held (from__ to___)	Part-Time Full-Time	Was job directly related, slightly related, not related or don't know to your high school courses of study?	Reason you left
EXAMPLE: Exp. teaching	4th-4th	Part	slightly	better job offered

20. On the average, how many hours do(did) you work per week on your present or most recent job?(PLEASE WRITE IN)

_____ 40-41/

(Hours per week)

21. Approximately how much do(did) you earn per hour on your present or most recent job?(PLEASE WRITE IN)

_____ 42-43/

(Wages per hour)

22. On your present(or last job held) how would you rate your wages?

Impossible to live on 1

Barely enough to meet needs 2

Enough to live comfortable 3 44/

Enough to be able to have some extras 4

Enough to have extras and save some 5

23. How are(were) the chances for increased wages, other than normal or cost of living increases?

None at all 1

Poor 2

Fair 3 45/

Good 4

Excellent 5

24. How satisfied are(were) you with this job?

TABULATION ONLY

Very satisfied 1

Satisfied 2

Neither satisfied nor dissatisfied 3 46/

Dissatisfied 4

Very Dissatisfied 5

25. How satisfied are(were) you with the following things on your present or most recent job? (CIRCLE ONE ANSWER FOR EACH ITEM)

	Very Satisfied	Satisfied	Dissatisfied	Does Not Apply	
a. Things I do	1	2	3	4	47/
b. Things I work with	1	2	3	4	48/
c. People I work with	1	2	3	4	49/
d. People I work for	1	2	3	4	50/
e. Wages	1	2	3	4	51/
f. Hours	1	2	3	4	52/
g. Fringe Benefits	1	2	3	4	53/
h. Working Conditions	1	2	3	4	54/
i. Distance to work	1	2	3	4	55/
j. Promotion Possibilities	1	2	3	4	56/
k. Training I am getting	1	2	3	4	57/
l. Others (WRITE IN)	1	2	3	4	58/
m.	1	2	3	4	59/

26. If you are now employed, how would you rate the security of your current job?

It will end soon, forcing me to change positions 1

It is one I can depend on for several years 2

It will be mine for as long as I want it . . 3 60/

The job is uncertain, I am unsure about the future 4

I never thought about it 5

27. Which of the following best describes your present situation? (PLEASE CIRCLE ALL WHICH APPLY)

a. Working full time(more than 30 hrs. per week) 1

b. Working part-time(less than 30 hrs. per week) 2

c. Not working-going to school full time . . 3

d. Not working-going to school part-time . . 4 61-62/

e. Working and going to school 5

f. In military service(no civilian job). . . 6

g. Unemployed, looking for employment. . . . 7

h. Unemployed, not looking for employment. . 8

28. What is your present marital status?

TABULATION ONLY

Single, never married 1

Married 2

Divorced 3 63/

Widowed 4

29. Do you have any children?

Yes 1

No 2 64/

30. How many children do you have? (PLEASE WRITE IN)

_____ No. of children 65-66/

31. COMMENTS

END DECK I

TITLE: DO SCHOOLS PREPARE GOOD WORKERS? VIEWS OF EMPLOYERS.

PERSONAL AUTHOR: SLAWSKI, EDWARD; PACKARD, STUART

DESCRIPTOR: *EMPLOYER ATTITUDES; *SURVEYS; *SCHOOL INDUSTRY RELATIONSHIP; *WORK EXPERIENCE PROGRAMS; COOPERATIVE PROGRAMS; VOCATIONAL EDUCATION; PROGRAM DESCRIPTIONS; PROGRAM EVALUATION; TABLES (DATA)

IDENTIFIER: PONTIAC; MICHIGAN

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 121P.; RELATED DOCUMENTS VT 103 203 AND VT 103 204 AND VT 103 255 THROUGH VT 103 258 IN THIS ISSUE.

ABSTRACT: EMPLOYERS IN THE AREA OF PONTIAC, MICHIGAN WERE SURVEYED TO DETERMINE THEIR ATTITUDES TOWARD THE VOCATIONAL AND WORK EXPERIENCE PROGRAMS IN THE PONTIAC SCHOOLS. DATA WERE COLLECTED BY MAILED QUESTIONNAIRES SUPPLEMENTED BY PERSONAL INTERVIEWS. CHAPTER I DESCRIBES THE RESEARCH METHODOLOGY AND THE CHARACTERISTICS OF THE 101 RESPONDING EMPLOYERS. CHAPTER II PRESENTS EMPLOYER RATINGS OF PONTIAC GRADUATES ON INTERPERSONAL SKILLS, COMMUNICATION SKILLS, WORK HABITS, WORK ATTITUDES, DECISIONMAKING, THE THREE R'S, AND SPECIFIC JOB SKILLS. ALTHOUGH MOST EMPLOYERS SAW FORMER STUDENTS AS ABOUT AVERAGE IN PERFORMANCE AND WERE FAVORABLE OVERALL TO THE GRADUATES, FEW WERE WILLING TO OFFER STRONG ENDORSEMENTS. CHAPTER III OUTLINES EVALUATIONS OF SPECIFIC PROGRAMS BY THE EMPLOYERS INVOLVED. IN CHAPTER IV EMPLOYER INTERVIEWS PROVIDE INFORMATION PERTAINING TO WHAT EMPLOYERS PERCEIVED AS IMPORTANT WORKER QUALITIES, THE SCHOOL'S ROLE IN DEVELOPING THESE QUALITIES, AND SUGGESTIONS ABOUT METHODS THE SCHOOLS MIGHT USE. RESPONSES INDICATED STRONG SUPPORT FOR COOPERATIVE PROGRAMS AND A WILLINGNESS TO TAKE PART IN PROGRAM PLANNING AND DEVELOPMENT. APPENDIXES (52 PAGES) CONTAIN PROJECT-RELATED CORRESPONDENCE, SURVEY INSTRUMENTS, AND TABLES DISPLAYING EMPLOYERS' RESPONSES. (NJ)

ACKNOWLEDGMENTS

The Research and Evaluation Department and the staff of the Decision-Oriented Evaluation System of the Pontiac Schools, express deep appreciation for the assistance received from many sources in the conduct of the study reported in this publication. The graduates of Pontiac Central and Northern High Schools and Pontiac area employers who responded to questionnaires and interviews were very cooperative and supportive of the study. The vocational and cooperative education staff members and the business management staff of the Pontiac School District who provided consultant service, made generous contributions of time and information. Special thanks to Mr. M.C. Prottengeier, Director of Vocational Education, and Mr. Donald Kaiser, Placement Consultant.

This publication was prepared pursuant to a contract with the Office of Education, U.S. Department of Health, Education and Welfare. Contractors undertaking such projects under Government sponsorship are encouraged to express freely their judgement in professional and technical matters. Points of view or opinions do not, therefore, necessarily represent official Office of Education position or policy.

FOREWORD

The preparation of students to become skilled, productive, and self-fulfilled workers is one of the schools' major functions. There is widespread concern among employers, labor organizations, and governmental agencies about the effectiveness of the schools' contribution to the skill preparation and work attitudes of young people. Such concern is not misplaced, for studies of the American work force indicate the strong presence of dissatisfaction, uncertainty, and hostility toward their jobs among American workers. In response to these evidences of unease about the role of work in the life of the nation, educational planners have given increasing attention to school programs which contribute to the work-readiness of youth.

The School District of the City of Pontiac, located in an industrial center and serving a working population, is very conscious of its responsibility to assist Pontiac students in making a successful transition from school to work. Recent years have seen substantial progress in our programs in career development, career education, and vocational education. We are proud of our progress, but we are aware that many of our students are not prepared sufficiently to cope with their uncertain vocational futures. The Decision-Oriented Evaluation System (DOES), a project funded under Part C, Vocational Education Act, and reported in part in this publication, has afforded the Pontiac schools an excellent opportunity to examine and evaluate portions of the district's programs in vocational education and work experience. The findings from the study will provide valuable information for school district planners and decision makers in determining future program directions. It is our sincere hope that the DOES report will be of assistance to other educators, as they examine their programs in vocational education.

CHAPTER I

EMPLOYERS AND THE SCHOOLS

INTRODUCTION:

The study of Pontiac area employers reported in this publication is part of a larger examination of the effects of work experience programs, funded under the provisions of Public Law 90576, Vocational Education, Part C, "Research and Training in Vocational Education". The project from which this report is derived was entitled Decision Oriented Evaluation System for Alternative Work Experience Program (DOES) and was conducted by the Research and Evaluation Department of the Pontiac Schools, Pontiac, Michigan.

The Pontiac Schools submitted its proposal for funding and conducted the DOES project in response to two major concerns which are prevalent in vocational education: the need to examine the effectiveness of vocational programs, and the apparent difficulty experienced by many young people in making a successful transition from school to work. The two Pontiac high schools have long-established, well equipped and staffed vocational education programs, and a cooperative education program in which nearly one-third of 12th grade students participate.

To combine the concerns for program evaluation and successful transition of youth from school to work, the DOES project was designed to address the following goals:

1. To determine methods for improving student and employer satisfaction in work experience programs.
2. To use evaluation evidence to make decisions on standards for alternative work experience programs.
3. To clarify legal and other barriers to work experience programs.
4. To determine program costs on a per student basis and compare program costs in terms of student outcomes.

Goals one, three, and four implied particular tasks for the DOES project staff. Two populations of 1972 Pontiac high school graduates, one of participants in the cooperative education program, and another of non-participants, were surveyed to determine their occupational placement and their evaluation of their educational preparation for work. A substantial number of employers who provide cooperative education work placements for high school students were surveyed and interviewed to obtain their views on the schools' preparation of young people for work.

An attorney was engaged to examine and clarify the legal and quasi-legal barriers which affect the employment of school-age youth. A detailed analysis of Pontiac's vocational education programs was conducted to determine their costs per academic credit for facilities, equipment,

and instruction and to compare them to the per credit costs of non-vocational programs. During the conduct of the project, goal two (decision making based on evaluation evidence) has been addressed through continued consultation with vocational education administrators and instructors about project activities and products and their potential value in the modification of vocational education programs.

PONTIAC-AREA EMPLOYERS AS SCHOOL CLIENTS AND PATRONS.

Employers are in a dual relationship to high school vocational education programs. On the one hand, they look to the schools to provide individuals with sufficient abilities to get and maintain jobs in their companies. By providing training to students, schools feed the local labor pool. In this sense employers are clients of the schools. On the other hand, in order to prepare adequately their students for entry into adulthood, schools must rely on support from employers. This support may be indirect to the extent that employers ultimately hire students after their graduation. However, there are also direct ways in which employers participate in the educational process. By involvement with students while they are still in school through such programs as student work experience, the employer becomes a patron of the school. Both aspects of this dual relationship are important in assessing the success of general school programs and particular vocationally-directed courses. Our research addressed both aspects of the employer-school relationship.

Pontiac, as its name suggest, is largely an auto town. By far the largest employers in the area are the large automobile manufacturing plants. General Motors Truck and Coach, Pontiac Motors, Fisher Body, and Ford Motor Companies all employ hundreds of former Pontiac students. There are, however, other large employers. In the retail

trade, Sears Roebuck, Montgomery Ward, J.L. Hudson, and K-Mart have major stores in the immediate area. Pontiac General, St. Joseph Mercy, and Pontiac Osteopathic Hospitals provide jobs in the health areas. In addition to the large companies, many moderate and small companies exist and thrive in the Pontiac area. Several nursing homes, construction companies, and supermarkets employ between fifty and one-hundred Pontiac area residents. Various still smaller local businesses include floral shops, gas stations, drug stores, and small manufacturing shops. Therefore, although the auto industry is dominant, employment opportunities are diverse and not exclusively in the manufacturing sector.

The Public Schools endeavor to meet the challenge of this diversity by offering a wide range of programs designed to aid the student's entry into the world of work.

The Pontiac Schools, located in a major center of the automobile industry and serving a working population, have recognized the continuing need among their students for occupational preparation. In the total Pontiac high school curriculum, vocational education has held for many years a strong and respected position. Both Pontiac high schools offer a full range of vocational classes in well designed and equipped shops and classrooms. General skills in such areas as, business and office procedures, metal and wood working, drafting, retailing, electronics, and home economics and health services form

the basis for instruction in the high school vocational curriculum. Well-established cooperative education programs in business, retailing, trade & industrial, and home-economics/health, enable many students to attend school and gain supervised work experience simultaneously.

In 1971 the Northeast Oakland Vocational Education Center (NEOVEC), a vocational center which serves eight high schools including the two Pontiac high schools, opened to provide job-specific training in sixteen occupational programs. NEOVEC's courses greatly increased the options of Pontiac students in selecting training for work.

The Pontiac Schools have provided leadership in the growing educational emphasis upon career development for youth. A variety of programs at all grade levels has influenced the general curriculum to address student needs for career awareness, self-awareness, and interpersonal and decision-making skills. Prominent among these has been the Pontiac Adult-Student Learning System (PALS), a program for high school students which trains students in the skills of career exploration, planning, and selection, and places them in a work internship in the community.

The success of these programs depends ultimately upon the acceptance of their graduates by the range of employers in the city. Our data were developed to guage employer reaction to these programs.

METHODOLOGY.

Since one of our primary goals was to collect employer evaluations of school programs, we began by listing employers who had in the past cooperated with the Pontiac School programs. We first developed a list of all employers who had participated in the Cooperative Education Program during the 1971-72 school year. Our primary sources for these employers were those listed on the program for the annual COOP banquet and those employers who had participated in the Pontiac-Adult Student Learning System. A third source of employer names was the responses of 1972 graduates of Pontiac Schools to a mailed questionnaire which was part of another segment of our research. Finally, these lists were augmented selectively by using Polk's Business Listing and identifying those employers with Pontiac mailing addresses.

Our listing process yielded three hundred employers who had in the past or who were known currently to be employing graduates of the Pontiac Public Schools. All listed employers were sent a questionnaire by mail. About one-third, one-hundred and one (101), employers returned the questionnaire.

We must note some caveats in interpreting our data. First, our lists did not represent necessarily the entire universe of Pontiac-area employers. Our list is biased toward employers who have had opportunity to employ Pontiac graduates. However, our list does not include

the many employers who are located beyond the immediate Pontiac area. These firms are within easy reach of Pontiac residents. Whether, and to what extent, they constitute a different population of employers from our respondents cannot be tested in our data.

Second, we contacted everyone on our list. Only one-in-three responded. Limited resources prevented any follow-up activities for employers who failed to respond. We cannot estimate the extent of the bias of our respondents. We are unable to determine, for example, if non-response means disapproval or lack of interest.

These two points, the potential bias in selection and the potential bias in returns, are merely specific ways of saying that our list of businesses does not constitute a scientific sample from a known universe and, therefore, will not support inferences to the total employer population. However, we present these results as evaluative statements of this particular group of employers and suggest more systematic attempts be made in the future to gauge employer opinion.

In addition to the mailed questionnaire to employers, fourteen employers agreed to personal interviews. These employers were chosen according to various criteria. First, we selected employers in firms of different sizes. Three employers were interviewed from very small companies with ten or fewer employees; four, from moderately small businesses with from eleven to forty-nine employees;

three from moderately large employers with between fifty and one-hundred employees; and, finally, four employers who employ more than one-hundred people. Second, we chose employers representing a variety of major work activities. Our interviewers contacted a small privately-owned real estate company, a building contractor, the City Department of Public Works, and two of the General Motors Divisions, among others. Third, all four of the cooperative education areas were represented: trade and industrial, retailing, health service and child development, and business. Finally, we tried to balance our interviews with employers among those with experience in conducting work experience programs and those without it. Of the fourteen interviewed, five had worked only with coop students; two, only with PALS students; four with students in both programs; and three, with students in neither program. A description of the results of these interviews appears in Chapter IV of this report.

CHARACTERISTICS OF RESPONDING EMPLOYERS.

Employers who completed and returned the mailed questionnaire represented firms of varying sizes. One-fifth (21 percent) of responding employers represented very small firms employing ten or fewer people. About one-fourth (24 percent), came from moderately small business employing more than ten but less than fifty employees. Fewer than one-in-ten (7 percent) of our respondents worked for moderately large firms, and

fifteen percent represented very large firms. Over one-third (34 percent) did not specify the number of employees in their business (See Table 1).[1] Our respondents, then, represent the range of sizes of employers.

Individuals at various levels in the organizational hierarchy completed the questionnaires. Table 2 shows that the majority of respondents who identified themselves by title are in positions of some responsibility within the company. Ten percent were proprietors; twenty-three percent were company executives, such as presidents or vice-presidents; and, twenty-seven percent were managers. About one-in-ten (9 percent) were in the personnel department. Only about one-in twenty (6 percent) identified themselves as lower level employees. One-fourth (25 percent) did not answer this question. However, the relatively high positions of our respondents indicate that in general their responses represent authoritative information about policy in their firms.

SUMMARY.

This report deals with data about Pontiac-area employers collected by a mailed questionnaire and supplemented by personal interviews. Although the respondents do not constitute a representative sample of all local employers, they are drawn from a range of companies and positions. The high organizational

[1]All tables referred to, in this report, appear in Appendix II.

positions of the respondents lend credence to the policy implications of their responses. Chapter II will describe the responses of the total group of employers to questions about high school programs in general and Pontiac School programs in particular. Chapter III will outline the evaluations of specific programs by the employers involved with these programs. We will conclude with Chapter IV which presents some more detailed information drawn from the personal interviewers with employers.

CHAPTER II

PONTIAC EMPLOYERS RATE HIGH SCHOOL VOCATIONAL EDUCATION

INTRODUCTION:

Ultimately any vocational educational program must be tested in the real world of employment. If a program is effective, its graduates will be accepted by employers. In this chapter we will describe the beliefs of employers about the general characteristics of employees and their ratings of Pontiac graduates in particular. Although we separated those local employers who participate in work experience programs from those who do not, examination of the data revealed no instances of significant difference between these groups. Therefore, in the text, we will only comment on the total group of employers. In Appendix II, however, we do present the distributions of responses for both groups, as well as the total sample. We will begin by describing employers' reactions to the local labor market.

PONTIAC AS A POOL OF EMPLOYEES.

As soon as a student graduates from high school and begins looking for a job, he is immediately in competition with all other job seekers. Some are more capable than others in this competition. We asked Pontiac employers to describe the employment market in Pontiac. We wanted to know if they thought there were enough competent people

to fill jobs in their companies (Table 3). Only about a third (34 percent) replied that there were "too few" competent people; another third (33 percent) claimed there were "just about enough"; and a final third (33 percent) told us that there were "more than enough" competent people to meet their employment needs. When employers who participate in Work Experience Programs were compared with those who do not participate, an interesting difference emerged. Non-participating employers (53 percent) were about twice as likely as participating employers (26 percent) to see a surfeit of employees. Fewer than one-in-five (16 percent) of non-participating employers thought there were "just enough" competent people for their jobs. About equal proportions of participating (35 percent) and non-participating (32 percent) employers thought there were "too few" competent people. In general, it seems that employers who participate in work experience programs are more demanding in terms of the level of competence they expect from employees. We find these participating employers experience more difficulty in finding enough competent people to meet their employment needs. However, this difference is not reflected in any systematic way in their evaluations of the schools. We next discuss the beliefs which employers have about their workers.

Occupational Beliefs of Pontiac Employers.

Hiring practices in a company or business reflect a set of beliefs which the employers hold about the firm and

the kind of individuals needed to do the work. A successful high school program takes these values into account as well as attempting to provide job-specific skills. To the extent that school programs coincide with employer expectations, the employability of graduates of the program is increased. Part of our research was directed at ascertaining the expectations of employers. A series of value items were administered to Pontiac area employers. These items touched on such issues as responsibility for training and the value of vocational education. In the following sections we describe their responses in two clusters; employer perceptions of a general orientation to work and specific ratings of job skill training. The level of agreement of employers participating in work experience programs and those not participating will not be treated separately, since the case basis for these sub-groups is too small for stable estimates. The specific evaluations of cooperating employers will be detailed in the next chapter. However, in no instance was there a significant difference between them on issues of occupational belief.

General Work Orientations of Employers.

When the total list of occupational belief items was examined, certain statements received unanimous support by Pontiac area employers. These statements seem to reflect a broad framework in which employment decisions are made. We isolate these items and others that seem related for description because they represent an

irreducible minimum which employers expected from potential employees. Any specific skills that workers have must appear in conjunction with these general orientations to work. The fact that all the employers who responded agreed to their importance underlines the necessity for vocational education programs, teaching students general as well as job specific work skills.

Virtually every employer (99 percent of respondents) agreed that "it is pretty important for an employee to be able to get straight what his boss is talking about", (See Table 6). Hardly any businessman who responded to this question seemed to think that he could accept a situation where the worker could not listen to and understand directions. It is interesting to note that only about a third (32 percent) of the employers saw the inability to understand adults as endemic to young people. Over two-thirds disagreed that "young people today don't know how to talk to adults and learn from them", (See Table 18). Therefore, it seems among this group of employers that a "generation gap" is not used to explain employer-employee communication problems. Youthful workers, as well as older employees, are expected to take directions from their bosses. Employers, in general, did not seem biased against young people in terms of their ability to become part of a work team. Not only must employees be able to communicate with their bosses, but they must also be able to deal effectively with other workers in the work situation. The importance

of interpersonal relations among workers on a job site is underlined by all employers. Ninety-nine percent of our respondents agreed that anyone they hired "must be able to get along with other workers", (See Table 15). Clearly these employers saw the necessity of interpersonal skills for an employee on the job. One skill which good employees are expected to have, no matter where they work, is the ability to find a place among their fellow workers.

Employers stress the need for employees to be able to understand their bosses and to get along with fellow workers as parts of a general orientation to a job. Repeatedly we will see the importance of employee attitudes toward work in general and a job in particular. At this point, we note that employers saw the schools being responsible for developing proper attitudes among students. Ninety-seven percent of the employers answering the questions agreed that the "schools should teach students that it's important to have a good job and do it well", (See Table 19). As employers saw it, school should help students develop these basic values. Below we describe other areas where employers saw schools playing a socializing role, but there is not the same level of agreement on these specific issues. In terms, however, of a general orientation to the value of work, employers were willing to assign responsibility to the schools. Specifically, employers saw schools as training students in the value of regular attendance at work. Over four-fifths of the employers (84 percent) agreed that "unless kids learn to

come to school every day they will miss work whenever they feel like it", (See Table 21). As far as most employers are concerned, school attendance is an indicator of attendance at work. If schools can develop good attendance habits among the students, employers seemed to think they would have fewer absentee problems. In the particular area of absenteeism, then, employers saw schools having a very important preventative role to play.

Employers, in general, reported experiencing increasing difficulty finding "good" employees. Nine of ten (90 percent) agreed that "it is getting harder to find new employees who are willing to work hard and do a good job", (See Table 20). This comment seemed to refer both to work attitudes and work performance. Although most employers thought there was a relatively large labor pool from which to choose, they expressed some reservations about the quality of these potential employees.

One characteristic which impressed many employers, was an apparent lack of concern by the applicant for the hirer's impression of him. Two-thirds (67 percent) stated that "young people today don't try to make a good impression when they look for a job", (See Table 12). Employers might well view this lack of concern as an indicator of the applicant's failure to appreciate the value of a job, specifically the one being applied for. If school programs addressed the issue of training students in the skills of presenting themselves well, this negative reaction of employers might be lessened.

Finally, one additional item is included in this section which indicates the importance of employee values in employment decisions. We stated the relationship between work attitudes and work performance in negative terms and asked employers if they agreed that it did not matter "how a person feels about work as long as he does his job", (See Table 7). Only one employer in twenty (5 percent) supported this statement. Overwhelmingly (95 percent disagreed) employers rejected a position that implies attitudes are not relevant for good employees.

In summary, items measuring a general orientation to the world of work received almost unanimous support from employers in the Pontiac area. Included in this general orientation are interpersonal and communication skills which do not seem job specific. The ability to "get along" was seen as a critical employment skill in any work setting. The implication for school programs seems to be that these more general skills should be part of any training package. In addition, employers seemed to expect schools to address the more fundamental issue of the value of work at a job. Good employees are those who understand that work is important and appreciate having a "good job" and who show their appreciation by their behavior. We suspect that employers believe that employees having these attitudes demonstrate better performance on the job. We will see in a following section that businessmen are willing to train in specific skills; however, they look to the schools to

provide applicants with a foundation in more general work values.

SPECIFIC WORK SKILLS AND TRAINING.

In the preceding section, we saw that Pontiac area employers thought the schools had responsibility for imparting certain general work orientations to students. However, successful performance in a job situation requires specific skills as well as general ones. There is real work to be done which involves particular "know-how". We asked employers questions about the importance of these specific kinds of skills for employment and the effectiveness of school programs in teaching such skills. This section discusses employer responses to these items.

There was a general endorsement of vocational education from the employers. Over half (57 percent) agreed that "high school vocational education does a good job in preparing people to work for their firm". (See Table 8). Moreover, fewer than one-in-five employers (17 percent) affirmed the suggestion that "schools should concentrate on the three R's and leave work skills to the employers", (See Table 10). Most employers saw the school as being significantly involved in training which was not strictly academic. There does not seem to be much support for a "head-in-the-sand" attitude on the part of the high schools. Vocational education programs have a definite place in the pre-employment training of employees. Responses to additional questions suggest that the exact nature of the contribution of vocational

education programs in the high schools is in doubt. Although there is a belief that such courses provide effective training in generalized, non-specific skills, there is some doubt about their ability to do actual job preparation in any specific case. Almost two-thirds (65 percent) expressed the opinion that "schools don't do much in the way of teaching kids about the real world of work", (See Table 9). Also, three-in-five employers (62 percent) agreed that "high schools aren't really able to teach people to do most jobs", (See Table 17). Therefore, the majority of Pontiac-area employers expressed reservations about the extent to which high school vocational education can prepare students to do most jobs in a real work environment.

Whatever reservations employers have seem to be less operative with regard to one specific aspect of vocational preparation in the schools. Almost three-quarters of the employers (70 percent) endorsed the work experience component, (See Table 13). A large majority thought it a good idea that "all students should be required to have some actual work experience before they graduate from high school." Work experience programs involve the actual placement of students in a real job situation. Through this placement they acquire actual "hands-on" experience in that particular job. If the employer cooperates, and the experience is coordinated with the classroom training, these experiences can provide the student with direct, job related skills as well as an awareness of the realities of working. We

shall review the responses of employers to these particular programs in a later chapter of this report. At this point, we note that the endorsement of work experience programs probably reflects a basic distrust of simple classroom instruction. Since actual, on-the-job experience involves much more of the actual job conditions, it perhaps is not surprising that employers preferred it.

Graduates of vocational courses in high school are in an inferior competitive position in the employment market when compared to experienced workers as far as several employers are concerned. However, large numbers of employers saw high school vocational education training as being as good as previous experience on the job. Almost half (49 percent) of the employers agreed with the statement that "a good training course in high school is as good as previous experience in preparing people for jobs", (See Table 11). On the other hand, only about two-in-five (39 percent) agreed that "a person who has worked at a job before is a better employee than someone who has just finished school", (See Table 5). Although the latter question does not specify what kind of training the individual received, in three of five cases their newness in the labor market will not be penalized, presumably, if they have the proper training. From what our respondents said, it seems that vocational education eases entry into the labor market.

Prior experience, in any case, does not seem sufficient in itself for employment. Our respondents

indicated a concern for the particular kind of experience workers had and how well they had performed in that experience. The standard practice of checking references was endorsed by most of the employers. Almost three-quarters (70 percent) said they were "hesitant to hire new employees" unless they had "good references", (See Table 16).

Finally, we attempted to determine the willingness of employers to provide the training needed for jobs in their businesses. A large majority (76 percent) accepted "responsibility to train employees to do the jobs they are hired for", (See Table 4). Only about one-quarter (26 percent) said that "it's too costly to train new employees for their jobs", (See Table 14). Therefore, employers in general, seemed willing to provide additional training opportunities for employees to enable them to perform adequately in their jobs.

With regard to the provision of training, we suspect that there are differences among the various types of businesses and sizes of firms. Such differences probably also appear in considerations of the value of high school vocational education programs. Our data base is too small to support meaningful comparisons by type of business and size of firm. For a more detailed reading of these differences, additional data on representative businesses should be collected. Our conclusions from our somewhat limited data are that local employers support vocational education, particularly work experience

programs, and that these programs, from employer reports, ease the entry of graduates into the job market. In the next section, we will report the specific evaluation of employers of the graduates of Pontiac high schools.

EMPLOYER RATINGS OF PONTIAC HIGH SCHOOL GRADUATES.

We created a list of the characteristics of "good" employees and asked employers to compare graduates of the Pontiac schools to the average worker on these characteristics. Our intention was to have employers tell us how our graduates measured up when they entered the job market. We included as many areas as possible in our list of characteristics. Not all areas are or could be addressed in school programs. However, by examining employer responses on these dimensions, we can isolate areas where programs are successful or need improvement. We present the results in the order of favorableness of employers.

INTERPERSONAL SKILLS

Pontiac graduates receive the best comparative ratings from employers on their ability to "get along with supervisors and other workers", (See Table 26). Almost one-in-ten (9 percent) said that Pontiac graduates were better than the average worker at getting along, and over three-quarters (77 percent) said they were at least as good as the average worker. Only 14 percent said Pontiac graduates were not quite as good as the average worker in interpersonal skills on the job. The majority of local employers saw Pontiac graduates as

being able to deal with other workers in a work setting.

COMMUNICATIONS SKILLS

Most Pontiac employers thought that former students "make sense in what they say", (See Table 25). Four-in-five of all employers (80 percent) said graduates are about average in their use of language; only two percent saw them as better than average; about one-fifth (19 percent) rated students as not quite as good as the average worker. Local employers rated the communication skills of our graduates at least as good as those of their average workers.

THE THREE R's

Basic reading and math are essential for most jobs in today's society. We asked employers how well graduates did in these very basic skills. Three-quarters (75 percent) of all employers stated that Pontiac graduates "can read, write and do the math necessary for the job", about as well as the average worker, (See Table 22). Only three percent thought students were better than average. However, almost a quarter (22 percent) said Pontiac graduates were "not quite as good as the average worker" in these skills. Therefore, although a majority of Pontiac employers affirmed the ability of Pontiac graduates to handle basic reading and math, a sizeable minority raised questions about basic skills.

WORK HABITS

Being present and prompt on the job is important in any business enterprise. In general, employers thought

that Pontiac graduates whom they employed were at least as good as an average worker in these qualities. Three-fifths (61 percent) stated they were average in attendance and promptness, (See Table 29). A sizeable number (14 percent) rated graduates as better than average, however, and one-fourth (25 percent) rated them worse than other workers. Fairly frequently, then, local businessmen found our graduates not to be displaying good work habits. We saw in the previous section the importance attached to these skills by employers. If the graduates develop the reputation among a number of local businesses for absenteeism and tardiness, placement problems may become more difficult.

DECISION-MAKING ON THE JOB

Only the most menial tasks do not require some thinking from the workers, and all "better" jobs are open only to individuals who can use good judgement, (See Table 23). How well are graduates of the Pontiac schools trained to use "good sense in making decisions on the job?" Again, among all employers, the large majority (70 percent) thought that graduates were at least as good as the average worker. Only three percent thought them better than average. More than one-fourth (27 percent), however, saw Pontiac graduates "using good sense" less often than the average worker.

In the use of decision-making skills, a sizeable number of local employers question the good sense of our graduates. The extent of this questioning should

be determined better, since making good decisions is a prerequisite for job advancement in most areas.

WORK ATTITUDE

Many employers stress the importance of effort in good employees. We asked employers to rate how often our graduates tried "to do a good job at work", (See Table 28). About one-in-five (5 percent) employers responded that our graduates were better than average; two-thirds (66 percent) rated graduates as average; but, three-in-ten (30 percent) said they did not try as hard as the average worker. From our description of the general occupational values of employers, we suggest the importance of graduates displaying good work attitudes. Since employers saw the schools as responsible for fostering these attitudes, they may look unfavorably at programs which do not produce them.

PERSONAL APPEARANCE

In many employment situations, how a person dresses is important, since the business image of the firm is involved. Wearing clothes which are "right for the job" is a consideration for many employers. About half (55 percent) of all employers rated Pontiac graduates about average in appearance; more than one-tenth (12 percent) gave former Pontiac students a better than average rating; however, almost a third (33 percent) said these students were not quite as good as the average worker, (See Table 24). Again, in the area of appearance, we find a large minority of local employers who are critical of Pontiac graduates. Appearance and dress are

fundamental in managing impressions. Perhaps more attention can be given to sensitizing graduates, so that the number of unfavorable employers can be reduced.

SPECIFIC JOB SKILLS

How do Pontiac high school graduates measure up to average workers in terms of what they can do when hired? We saw above that most employers accept some responsibility for the training of new employees. However, some employees "already knew how to do the job they were being hired for", (See Table 27). About half (51 percent) of all employers said Pontiac graduates were about as good as the average worker in knowing the jobs they are hired for. Relatively few (4 percent) saw them as better than average. A substantial minority (45 percent) thought graduates were not quite as good as average workers. These responses cannot be interpreted simply as a negative evaluation of high school programs. Not all potential employees have been exposed to specific job training, and actual work experience on a job is generally considered superior to classroom instruction. Therefore, we are surprised that so many employers are favorably disposed toward Pontiac graduates. Data on specific jobs are not available for comparison among various kind of jobs. In any case, it seems that many Pontiac area employers see the products of the high school to be deficient in job skills. To the extent that possession of these skills is a criterion for employment, Pontiac graduates are at a disadvantage.

In summary, most local employers view favorably the products of Pontiac schools. In no area measured did a majority rate the graduates worse than average. Ratings of interpersonal skills and communication abilities were highest. Graduates did slightly less well in cognitive skills, work attitudes, and decision-making abilities. The least favorable scores occurred on personal appearance and specific job skills. However, by and large, the employers saw Pontiac producing graduates about at the average level. We cannot determine with these data whether "average" translates into being hired. In a tight labor market, perhaps graduates must strive to be "better than average." In the next section we will examine the relationship between the employers' occupational values and their ratings of Pontiac graduates.

General Work Orientations and Ratings of Graduates.

An overreaching goal in this research was to generate data which could serve as input to decision-makers in the vocational education program for the Pontiac schools. In earlier sections of this chapter, we have described the perceptions of local employers of the general work orientations of their employees. Subsequently, we explored their specific ratings of graduates of Pontiac schools. Each of these data sets sheds some light on the state of vocational education in the Pontiac area. Employer perceptions, we argue, set a context in which hiring decisions are made. By understanding better this context, program decisions can be made which maximize

the strengths of the program in an employment situation. For example, employers complained of a lack of concern for impressions. Awareness of this complaint can be translated into attempts by placement officers to sensitize applicants to avoid seeming unconcerned. Possibly, aspects may be added to the vocational education program which train students in these skills more systematically. Our data merely have isolated a potential need.

More specifically, we have collected employer ratings on certain characteristics of Pontiac graduates. Here again, our data reveal possible directions for program modification or development. Although employers appeared generally favorable to our graduates, a fairly large minority claimed that former students from Pontiac paid less attention to their personal appearance than the average worker. Lessons on grooming and dress can be expanded and made available to more students. This finding may have programmatic implications in and of itself.

There is, however, another level of concern which we can address in our data. The examples presented above illustrate a possible relationship between the general assessments of employees and the specific ratings of graduates. In this instance, personal appearance is an important component of a good impression. If an applicant arrives for a job interview looking unkempt and disheveled, the employer may infer understandably

that the individual is not really interested in gaining employment. More seriously, if the employer happens to believe that most "young people" really do not want to work hard, his opinion of the entire program may be damaged because the schools have not imparted a basic value for work. The correspondence between his prejudice and the evidence of the encounter with a Pontiac graduate may make him reluctant to have further dealings with our graduates. This reluctance may reduce placement opportunities for our graduates. We were concerned with the tendency of employers to judge former students in terms of their more general appraisals of the labor force. In order to estimate the correspondence between the specific ratings of graduates' and employers' orientations, we computed Pearson product moment correlations between the two sets of employer responses. By coding agreement with the value statements as "1" and disagreement as "0", we were able to determine the association of specific ratings with more general work orientations. We shall discuss these relationships in this section. Four of the eight items discussed under the general orientations to work section will not be included here. These items are: understanding what the employer says; getting along with other workers as a hiring criterion; schools' teaching of the basic value of work; and, work attitude and performance. For each of these items, there is so little disagreement among respondents that calculation of a correlation statistic

is meaningless. No matter what other ratings employers make, they are likely to agree on these four items. At a general level, they are part of any employer context.

Employers who view youth as usually unresponsive, tend to rate Pontiac graduates negatively on six of the eight possible areas. First, if an employer thinks "young people today don't know how to talk to adults and learn from them", he also tends to think that graduates do not always try "to do a good job at work" (r=-.46, P .001).[1] Second, this employer also is critical of the personal appearance of graduates (r=-.41, P .001). Third, we see Pontiac graduates less prepared for the jobs they are hired for (r=-.27, P .03). Fourth, he is more likely to be critical of the promptness and attendance of former Pontiac students (r=-.24, P .04). Fifth, he does not think graduates get along well with supervisors and other workers (r=-.24, P .04). And, finally, an employer who thinks that graduates do not "make sense" in what they say (r=-.17, P .10). Consequently, it seems that negative ratings of Pontiac graduates on almost every dimension are related to a general distrust for young people. Almost regardless of the individual graduate and his/her performance, negative ratings seem to result. A possible implication from this pattern is

[1] The negative sign indicates that the relationship between the items is reversed, that is, when an individual is "high: on one, he is "low" on the other. In this case, agreement is "high" for the value statement; "better than average" is "high" for the ratings of graduates. For these correlations, a probability value less than .1 will be considered reportable since our interest is to point up possible patterns and not to test hypotheses.

that the program may have to endeavor to change this employer perception before more positive responses can be obtained. Also, if change is not likely, placement of students with such employers may yield a self-fulfilling prophecy to the detriment of the vocational education program and to the individuals placed. These speculations go beyond the data we have available, but the data do suggest benefit from a closer scrutiny of the occupational beliefs of employers.

Another occupational belief item which associates with graduate ratings is the belief that school attendance predicts work attendance. Employers who see this relationship are more likely to criticize the dress habits of Pontiac graduates (r=-.30, P .01), to find fault with their attendance at work (r=-.28, P .02), and to question their commitment to doing "a good job at work" (r=-.24, P .04). Attendance seems to be an indicator of a commitment to the job. As we saw above, employers attach considerable importance to a basic work ethic. For those who see the connection between school performance and job performance, graduates seem to rate rather poorly in comparison to average workers.

The two final belief items can be discussed more briefly. Employers who believe it is getting harder to find good employees are slightly more likely to rate Pontiac graduates negatively on their trying to do a "good job of work" (r=-.17, P .10). None of the ratings is associated with the belief that young people do not

strive to make a good impression.

We find some suggestive evidence that employers seem to base judgements of individuals and programs on occupational beliefs. Further exploration of particular ratings of particular individuals is necessary to document the systematic exercise of prejudice on the part of any employer. Moreover, the pattern of association should serve as an indicator of potential danger. The long-term success of vocational education programs depends upon a good reputation among the clients for its products, potential employers. What our data suggest is the possibility that certain beliefs preclude establishing a good reputation.

SPECIFIC TRAINING AND RATINGS OF GRADUATES.

Several items outlining the beliefs of employers about specific training experiences were described. In this section we describe the relationships between these belief items and ratings of graduates of Pontiac schools. Our intention is to explore patterns between the beliefs of employers and ratings of graduates.

Most unfavorable ratings of Pontiac graduates are associated with the employer belief that "high schools aren't really able to teach people to do most jobs". Those employers who suspect the efficiency of high school training rate graduates lower on their interest in doing a "good job at work" (r=-.41, P .002). They are less likely to think that graduates "make sense" in what they say (r=-.35, P .007) or use "good sense in

making decisions on the job" (r=-.27, P .03). Finally, questioning employers are critical of graduates' ability to "read, write and do the math necessary for the job" (r=-.23, P .05) and find former students less well prepared for jobs than average workers (r=-.22, P .07). It seems that employers who doubt the applicability of high school training to real life job practice find substantial justification for their doubts among graduates of Pontiac schools.

A similar pattern appears among employers who seem unfavorable to high school vocational education programs on belief items. Employers who think schools do not teach students about "the real world of work" are more likely to rate Pontiac graduates negatively in terms of entry level job skills (r=-.32, P .02) and work commitment (r=.19, P .09). Businessmen who believe schools should concentrate on basics and leave work skills to the employer also are critical of the work commitment of graduates (r=-.20, P .06). Finally, preference for experienced workers over recent graduates is associated under negative ratings of personal appearance (r=-.21, P .07). Not all employer beliefs are negative, however. Several of the belief items reflect positive attitudes toward the ability of school programs to prepare students for the world of work. Endorsing compulsory work experience programs for all students is associated under negative ratings of graduates on three items: personal appearance (r=-.29, P .01);

job skills at time of entry (r=-.30, P .02); and, commitment to doing a good job (r=-.27, P .02). We suggest that these associations reflect the advantages of "hands-on" experience discussed above. Students who have benefited from actual placement are exposed to situations where these criteria are demonstrated. Their exposure may develop in them behaviors which meet employer expectations. We would expect employers who favor work experience programs for all students to rate graduates having work experience higher than those without it. Our data do not allow us to test this hypothesis.

Employers who endorse positively the value of vocational education programs for training people to work in their firms, are more likely to view graduates of Pontiac positively. If an employer believes vocational education graduates are prepared to work for him, he is more likely to rate positively the entry level skill of former students (r=-.48, P .001) and to find their basic skills at an acceptable level for the required work (r=.37, P .006). Likewise, employers who believe that vocational education graduates are competitive with experienced applicants also rate the reading, writing and math abilities of former students as acceptable (r=.24, P .04). For those employers who are favorably disposed toward high school vocational education programs, Pontiac graduates do not seem to be a disappointment.

Finally, the position which employers take in regard

to training new employees is reflected in their ratings of the skills of graduates. Those hirers who are willing to train new employees are more likely to rate the entry level skills of graduates positively (r=.22, P .07). This positive rating may result from the experience of successful training of graduates or lower expectations of the skills w ich new employees should possess. We cannot address this issue with our data. However, we note that even those employers who say training is too costly rate the basic skills of Pontiac graduates as better than average (r=.9, P .08) while criticizing their personal appearance (r=-.29, P .01). We suggest the possibility that those who actually train new employees may be in a unique position to evaluate Pontiac graduates. Further research is needed with this employer group to specify whether new employees with vocational education are more trainable than those without such training.

Overall Ratings of Pontiac Vocational Education:

Toward the middle of the questionnaire, after employers had rated Pontiac graduates on the list of specific skills, we asked for an overall rating of effectiveness of Pontiac school programs "in preparing people for work", (See Table 30). Local employers had a generally favorable response to the work of the schools. Almost one-in-ten (8 percent) of all employers rated the job the schools do as "very good". Over three-quarters (79 percent) stated they did a "fair job" and twelve percent rated the job as "poor". Employers involved in work experience

programs were likely to be both more favorable and less favorable than non-cooperating businessmen. However, these differences are not large enough to rule out chance with the small numbers. Generally, it seems that, although local employers rate schools as doing an acceptable job, relatively few offer high praise.

CONCLUSION.

In this chapter we began by noting that most employers saw Pontiac as providing them with a sufficient number of competent workers. We pursued the occupational beliefs of local employers, so that we would be able to determine the schools' role in preparing competent workers for the labor force. Employers seem to be agreed on what constitutes a desirable general orientation toward work among their employees. Workers should appreciate the value of their jobs and demonstrate their appreciation by getting along with their bosses and co-workers, and by avoiding absenteeism and tardiness. In regard to training experiences, employers indicated their support for vocational education. These programs are based in real world skills which are of direct value to the employer. When rating the specific skills of Pontiac graduates, most employers saw former students as about average in levels of performance. We found some evidence that the beliefs of employers in different areas may influence their ratings of graduates. Overall, however, employers appeared to be favorable toward Pontiac graduates.

The implications of these data involve considerations of the level of support for school programs and techniques for increasing employer cooperation. Very few employers seemed willing to offer strong endorsements for Pontiac graduates. Program planners must evaluate the moderate level of support as it relates to the maintenance and development of field placements and job placements after graduation. If attempts are to be made for increasing employer cooperation, attention must be paid to the importance of employer beliefs in worker evaluations and hiring decisions. Aspects of vocational programs, which address these beliefs, may be highlighted or added. Program strengths in important areas must be stressed in approaches to employers. Specific evaluations by cooperating employers will be described in the next chapter.

CHAPTER III

WORK EXPERIENCE EMPLOYERS: EVALUATIONS OF HIGH SCHOOL PROGRAMS

INTRODUCTION.

The Pontiac School District offers a variety of vocational education programs. The last section of the questionnaire was designed specifically for employers whose companies participated in work experience programs through the Pontiac Schools. This chapter will present the responses of cooperating employers to specific evaluations of work education programs. We will begin by presenting the extent of involvement which all employers report with vocational programs in the Pontiac Schools.

PLACEMENT SERVICES.

The schools provide an organized placement service which attempt to locate jobs for interested students. This service is the official representative of the school system with the employer community.

A fair number of employers report using "the placement services of the Pontiac Schools to locate new employees", (See Table 31). Almost a third (32 percent) reported using the placement services; two-fifths (41 percent) said they had not used the Schools to find new employees; and more than one-fourth (28 percent) did not answer the question. Generally, one employer in

three of our respondents looked to the school as a source for needed manpower. Those who had used the placement services were then asked how "helpful" these services were. Over two-fifths (44 percent) stated they were "very helpful"; fully one-half (50 percent) said placement services were at least "somewhat helpful"; and only about one-in-twenty (6 percent) said the services were "not helpful at all", (See Table 32). The overwhelming majority of the clients of the services seemed satisfied with the results.

This pattern suggests that more exploration is needed into the function and visibility of placement services among the employer community. Since those who did use the services were generally pleased but constituted only a third of employers, perhaps increasing the amount of usage would produce more jobs for graduates. At this point, the suggestion is only tentative because we are unable to trace in any detail the reasons why most employers did not report using placement services, the exact nature of the employer uses, and the relationship between using the services and actual hiring. These questions may constitute areas for further investigation.

Employer Cooperation with Vocational Programs in the Pontiac Schools.

In this section we will report on employers' participation in the various vocationally related programs sponsored by the Pontiac Schools. Three-fifths (60 percent) of our respondents reported participating in at least

one of the activities listed below, (See Table 33).

COOPERATIVE EDUCATION (Co-op)

Students in Cooperative Education (Co-op) programs divide their school day between school attendance and work at a job. This job placement is supervised both by their employer and a school employed Co-op coordinator. Students are required to be enrolled in classroom courses which are related to on-the-job placements, and they receive school credit for the work experience. Over half of the responding employers (53 percent) stated that they had participated in the Co-op program. Their specific evaluations of various aspects of Co-op programs will be presented below. Here we note that most of our respondents are Co-op employers.

PONTIAC ADULT-STUDENT LEARNING SYSTEMS (PALS)

Students in the Pontiac Adult-Student Learning System (PALS) receive ten weeks of training in the employability skills of career awareness and exploration, career planning and decision-making, and interpersonal relations. After this training, they are placed in work internships without pay for ten additional weeks. Participating employers provide the opportunity for these interns to develop an orientation to a real work environment, to test out in a practical setting their classroom skills, and to reexamine their career options on the basis of experience before leaving school. The fact that PALS is a newer program than Co-op, is reflected in the fact that fewer than one employer in ten (9 percent) reported participating

in PALS.

NORTHEAST OAKLAND VOCATIONAL EDUCATION CENTER (NEOVEC)

Students in the Pontiac Schools may attend the nearby county vocational education center, the Northeast Oakland Vocational Education Center (NEOVEC). Students spend one-half of each school day for two years receiving instruction in the skills of a specific occupation, and, whenever possible, are placed in a community work setting during the latter part of the two-year training period. About one-fifth (19 percent) of our respondents reported cooperating with NEOVEC.

PROJECT GROWTH

Project Growth accepts high school drop-outs or adults needing job training. These students attend NEOVEC during the late afternoon and evening hours for instruction in job skills. In addition, they receive job placement assistance from Project Growth's own placement service. Fewer than one employer in twenty (4 percent) reported any experience with Project Growth.

VOCATIONAL ADJUSTMENT PROGRAM

Students who have physical, emotional or mental handicaps may attend NEOVEC through the Vocational Adjustment Program. There they receive instruction in job skills tailored to their abilities. Assistance is available to them in obtaining employment after training is completed. Only seven percent of employers report participation in the Vocational Adjustment Program.

MISCELLANEOUS EMPLOYER ACTIVITIES

Ten percent of our respondents reported participation in other work education experiences. These experiences would include employer services to the schools, such as career education field trips and role modeling, service on occupational advisory committees, and community awareness experiences for teachers and counselors.

Any employer who participated in at least one of the activities described above was asked to complete a series of questions which specifically addressed components of work experience programs. Their evaluations are presented below.

RATINGS OF SPECIFIC ASPECTS OF WORK EXPERIENCE PROGRAMS.

As our descriptions above indicate, the success of any work experience program depends upon employer support for and cooperation with the school personnel. Cooperating employers were asked to rate their satisfaction with particular aspects of the work experience programs. We present their evaluations in order of employer satisfaction, (See Tables 34 to 41).

AMOUNT OF STUDENT TIME AVAILABLE

Almost all (96 percent) of employers expressing an opinion said they were satisfied with the "amount of time students are available". Only four percent stated they were dissatisfied. As far as most employers are concerned, the availability of students is not a problem.

MATCHING OF STUDENTS WITH JOBS

Four-fifths (81 percent) of the employers said that work education programs did a satisfactory job of placing students in jobs that were right for them. About one-in-twenty (6 percent) found the matching process unsatisfactory. Slightly more than one-in-ten (12 percent) had no opinion. A clear majority of employers, then, rate favorably the schools' selection of students for placement.

STUDENT PRODUCTIVITY

Most students live up to employer expectations of how much they should do at work. Four-fifths (81 percent) were satisfied with student productivity. Almost three-in-twenty (13 percent) expressed dissatisfaction, and six percent had no opinion.

GRADING SYSTEM FOR STUDENTS

A majority of employers found the evaluation procedures for students acceptable. Over three-fourths (77 percent) said the grading system was satisfactory. Almost one-fifth (17 percent) were dissatisfied with grades. Six percent did not know enough about the grading system to give an opinion.

STUDENT WORK HABITS

In the important area of student work habits, the majority (74 percent) of employers thought work experience programs were doing a satisfactory job of training students in appropriate work habits. One-fifth (20 percent) found student work habits unsatisfactory, and six percent had no opinion.

SUPPORT FROM SCHOOL COORDINATORS

The crucial liaison function between the employer and the school is served by the Coordinator. This person is the school's official representative to the employer. A large majority (72 percent) of employers found these coordinators doing an acceptable job. Barely one-in-ten (11 percent) stated they were dissatisfied with coordinators. Reflecting perhaps a variety of the employer relationships that do not require coordinators, almost one-fifth (17 percent) stated that they had no opinion.

ON-SITE VISITS BY COORDINATORS

A major responsibility of the school coordinator is to visit the work site where the student is placed to determine the quality of the work situation and to get

direct response from the employer about student performance. Slightly more than half (54 percent) of the employers expressed satisfaction about on-site visits. However, only about one-fifth (22 percent) stated they were dissatisfied. Almost one quarter (24 percent) expressed no opinion. We suspect this relatively high proportion of "don't knows" reflects the fact that on-site visits are not appropriate for many kinds of employer contact with the schools.

EMPLOYER-COORDINATOR PLANNING

Mutual feedback between school and employers is desirable in developing meaningful placement experiences for youth. Only about half (52 percent) of cooperating employers were satisfied with the extent of planning with the coordinator. However, again we found a relatively high proportion of employers who expressed no opinion (26 percent) and only one-fifth (21 percent) who were actually dissatisfied.

In summary, employers in companies which have participated in work experience programs were quite satisfied with particular aspects of these programs. On every item rated, at least half of the employers stated their satisfaction and on all but two issues, on-site visits and employer-coordinator planning, three-fourths or more expressed approval. Before we attempt to interpret the relatively lower levels of satisfaction of employers on items dealing with coordinators, we note that many employers simply have no opinion about the

activity of coordinators. This absence of opinion is reasonable, since not all kinds of employer participation require contact with a coordinator. However, we would still suggest that coordinators play a valuable dissemination and public relations role for the schools in the community. It may be a matter of interest to determine in more detail the sources of dissatisfaction with coordinators. Such information may be useful in increasing the effectiveness of coordinators. Nonetheless, when employers were asked to give a global satisfaction rating of work experience programs, the overwhelming majority were satisfied. Two-fifths (40 percent) stated they were very satisfied and almost three-fifths (58 percent) were at least somewhat satisfied, (See Table 42). Hardly anyone (2 percent) stated they were dissatisfied with these programs. In short, the community of local employers expressed a strong wave of support based upon their experience with work education programs.

General Ratings of Work Experience Programs.

Employers who cooperate with work experience programs in the schools, are in a unique position in the community. They have direct knowledge of school programs, while having their feet firmly anchored in the real world for which schools must prepare students. Therefore, not only are their ratings of specific aspects of programs illuminating, but their perspective on the more general

issue of the relationship between employers and schools through work experience programs is also valuable. In the final section of the questionnaire, we posed a series of belief items addressed directly to our cooperating employers. The patterns of their beliefs about the role and importance of work experience in easing entry into the world of work for high school students are described below.

Most employers agreed that there are direct pay-offs to the students from participating in high school work experience programs. Almost all (92 percent) employers stated that "work education experience helps when students look for jobs", (See Table 50). No employer actually disagreed with the utility of work experience in job hunting, and only eight percent expressed no opinion. Additionally, many employers said that the way in which these work experience placements function, to assist in job seeking, is to enable the student to be directly incorporated into the job where he is placed. Four-fifths (81 percent) claimed that in their firms "many work education students are kept on for full-time jobs", (See Table 51). Again we found almost no disagreement (2 percent), but almost one-fifth (17 percent) declined to state an opinion. From their responses, we suspect that work experience placement functions to enable students to get their feet in doors that otherwise would remain shut. Through a mechanism which makes employing students acceptable to employers, students get both specific experience in a particular job which yields subsequent

full-time employment and more general job sensitization, which can be demonstrated in future employment seeking. Most employers who have experience with students in work experience programs, will point out the benefits to students.

All the benefits of these programs are not reserved for the students, however. Employers see both minimal acts and observable rewards to them for participating in work experience programs with the schools. Only ten percent of the employers believe "it costs employers too much to participate in Co-op programs", (See Table 46). Almost three-quarters (73 percent) dismiss the cost agrument. Almost one-fifth (17 percent) avoid answering. Moreover, relatively few employers (14 percent) thought that "being a work education employer doesn't help (the) business at all", (See Table 52). A large majority (69 percent) disagreed, apparently because hiring co-op students was helpful to their firms. More positively, over half (56 percent) stated that "hiring work education students helps a business's public image", (See Table 48). About one-fifth (21 percent) did not see any public image impact, and about one-quarter (23 percent) expressed no opinion. Moreover, many employers (58 percent) believed that "graduates of work education programs are better prepared than are other new employees", (See Table 44). About three-in-twenty (15 percent) disagreed and a quarter (27 percent) had too little information. Therefore, at acceptable cost levels,

employers can generate a more capable pool of employees while garnering good public relations in the community. Employers are aware of the importance of their input into the design and implementation of effective work experience programs. Over half (52 percent) of employers would like "more say in planning and teaching work education courses in the schools", (See Table 47). Although almost a third (31 percent) did not want more direct participation and about a fifth (17 percent) had no opinion, a fairly large proportion of cooperating employers expressed the desire for more direct impact. This response may be related to the relatively low levels of satisfaction with the employer-school relationship aspects of specific programs described above. Program planners may do well to attempt to determine in more detail the cause of employer discontent. Increased efforts to incorporate employer input may yield even higher rates of cooperation, more work placements, and, ultimately, more and better jobs for students.

Businessmen who have participated in work experience programs generally expressed high levels of support for the programs. Evidence of this support can be seen in the final three items to be described. Employers endorsed more work education programs. Three-quarters (77 percent) agreed there should be more programs; only about one-in-ten (8 percent) disagreed; fifteen percent had no opinion, (See Table 43). Not only should there be more work experience programs, but they believe that

"more Pontiac employers should hire co-op students", (See Table 45). Four-fifths (79 percent) of the respondents recommended that other employers hire co-op students. Very few (6 percent) disagreed with the suggestion, and fifteen percent chose not to respond. It seems, then, that employers see the need for more students trained through work experience and believe that students so trained should be absorbed into additional companies.

If there is such strong support, we might ask why co-op programs continue to experience difficulty in generating work placements, and placement programs experience problems in locating jobs for graduates? Employers suggested that part of the problem may be related to a failure to make the programs well known. Three-fifths (60 percent) of employers said that "most people around here don't know about work education programs", (See Table 49). Only about one-fifth (17 percent) did not think there was a lack of information, and about a quarter (23 percent) gave no opinion. Generally, though, employers seemed to think that there was not enough information available about work experience programs. Planners in the vocational area may want to address the issue of better publicity for work experience programs to meet this need.

SUMMARY AND CONCLUSIONS.

In this chapter, we have described the reactions of employers who participate in work experience programs to

particular aspects of Pontiac work experience programs and to the general notion of work experience in high schools. There are very high levels of endorsement for the amount of students' time available, student productivity, work habits, grading systems, and coordinator support. Less strong endorsement appeared for coordinators' on-site visits and planning with coordinators. More generally, these employers saw direct payoffs to both employers and students from participation in work experience programs. Students get increased opportunities for actual hiring into current placements or for better job hunting skills. At low costs, employers get better trained employees and the benefit of a good public image. Employers, however, expressed a desire for more direct impact in providing training to students. Nonetheless, cooperating businessmen recommended expanding programs and thought more of their colleagues should hire the products of these programs. More attention could be directed toward disseminating information about these programs so that the number of placements might be increased.

CHAPTER IV

EMPLOYER INTERVIEWS

In order to supplement the structured form of the mailed survey, the DOES "Survey of Employers" questionnaire was followed by personal interviews of a selected group of employers. Rather than to interview a large number of employers, the intent was to reach a small number and offer them the opportunity to respond spontaneously. This section will report information gained during these interviews.

Each employer who was to be interviewed, was notified in advance and asked to consider these four areas: the academic skills necessary to work effectively, job performance skills which students might acquire in school, attitudes of young workers, and recommendations for school programs, including cooperative education which seeks to increase the work preparedness of students. Emphasis was placed on the fact that interviews need not be limited to the specified areas. To encourage employers to be spontaneous, no formal interview format was used. Generally, those persons interviewed held administrative positions and were at least partially responsible for hiring and supervision. Fourteen employers were interviewed; ten of them had been involved in cooperative education programs. Large, medium, and small businesses were represented.

Cooperative Education and PALS as Preparation for Work

A major goal of the interview process was to obtain employer evaluations of the basic concepts of the Cooperative Education Program and the Pontiac Adult-Student Learning System (PALS). Although DOES staff interviewers avoided a structured question-and-answer approach, they did ask employers to react to a description of the basic goals of the two programs.

The Pontiac Adult-Student Learning System (PALS), is a complement to the cooperative education program, in that its goals are to provide a student with career development experiences and to enable him to make appropriate career choices. The co-op student receives related classroom instruction and on-the-job training to prepare for entry into a particular job or occupation and may continue in a co-op job assignment for as many as four school semesters. The PALS students participate in a ten week program of instruction and exploration, followed by a ten week internship in a local work setting. PALS' distinguishing training features are: training in the skills of human relations, self and career exploration, decision making, and planning of individual programs leading to action. The internship is an exploration of a work setting supervised by an employee in that setting and is intended, not to train a student in a particular job, but to provide a broad knowledge of needs and characteristics of the location.

Employers who had experience with the two programs

generally rated Co-op students and PALS interns as good workers who were interested in learning and becoming productive. All employers who had had contact with cooperative education, regarded it as an important contributor to the work readiness of youth. One out of every two employers considered the Co-op student as a potential employee. Critical comments were qualified as intended to improve a basically strong program.

Work Values of Young Employees

Employer comments had a tendency to extend beyond the Cooperative Education Programs and encompass youth in general as they enter the work force. Of the fourteen employers interviewed, three were completely positive regarding the values and attitudes of new young employees. Only one was totally negative. The remaining expressed a variety of concerns relating to attitudes which hinder the performance of the youthful worker. Strong emphasis was placed upon interest in the job. Workers must have some interest in their assigned jobs, and derive satisfaction from "a job well done". Dissatisfied employers felt the jobs were viewed with a "what can I get?" rather than a "what can I give?" attitude. Four employers felt that students held unrealistic expectations relating to economic and material gains, wanting high wages and expensive goods immediately. Honesty, integrity, and company loyalty were cited by several employers as weak qualities in new employees. Some employers felt that young people

are unable to accept criticism or cope with obstacles and failures. Those employers who were dissatisfied made several suggestions. They felt that students should be encouraged to believe that all jobs are important. Additionally, they cited a need for increased valuing among young workers of courtesy, interpersonal relations, and to dress appropriate to the work place.

The Role of the Schools in Preparing Students for Work

Responses to inquiries regarding the school's role in work preparation were divided. Four of the fourteen interviewees saw their new employees as well prepared and felt the school had provided adequate preparation. Those remaining expressed concerns relating to basic skills. Reading, mathematics and communication skills (written and spoken) were viewed as areas of deficiency. Employers felt that academic skills ought to be taught in an applied manner, particularly as the skills relate to work performance. Divisions of General Motors specifically recommended reviving and strengthening engineering drafting programs, which have waned in popularity in recent years. Two major inadequacies of the youth population, as perceived by some employers, are the apparent lack of incentive to seek employment and ignorance of their own skills and job interests. Several employers felt the school should and can prepare students in the skills of self-knowledge, job awareness, and work activities. Frequent employer

suggestions were: provide work experience for all students, use business and industry representatives as role models in the classroom as well as on the job, involve teachers and counselors in work observation and experience in local industry and business, introduce career education at early grade levels, and involve employers in school program planning.

Representative Responses of Individual Employers

The remaining portion of this section presents in vignette form several of the actual interviews. An attempt is made to describe the employment site without disclosing the actual business. Pseudonyms are used in place of the interviewees' real name.

Al Kowalski is owner/manager of a real estate company. Al is a graduate of the Pontiac School System. He employs a secretary and a sales staff which includes recent high school graduates. Mr. Kowalski regards cooperative education as one of the best forms of work training for youth. Although he is not at this time involved with school programs, he has had extensive exposure to them in the past. He supported strongly the PALS program when it was presented to him. In particular, he felt the decision-making component was especially important. He strongly criticized Pontiac Schools' preparation of youth for work, and the work values and attitudes of the youthful worker. Concern was voiced that graduates are weak in reading, spelling, and general academic skills.

They lack basic skills in mathematics and are unable to figure even simple interest rates. English classes are isolated units, and the written and spoken English competencies do not carry over to other classes. He suggested that the schools get back to basic skills of "reading, writing, and plain figuring". Emphasis was placed on improving communication and problem solving skills. He perceived the schools as being inconsistent in programs from one school to another, citing the students' need for consistent and sequenced programs. He strongly urged the school to maintain high standards, providing weak students with special help rather than lowering expectations. He viewed the youthful worker as having unrealistic expectations, wanting to "take", not "give", and being concerned with "driving that big car". He insisted that teachers make learning interesting. This employer would appear to view the road to employability as being paved by cooperative efforts, notably, student change in attitudes, and up-grading of school curriculum.

Sally Yonex is one of the persons involved with co-op students in a health care setting. Students are involved in a non-skilled care type unit and most frequently do clerical work. Although the co-op student or PALS intern is not usually involved in patient care, many opportunities exist for observational learning. She felt that any student could acquire sufficient skills and knowledge to be a potential full-time employee.

Ms. Yonex stressed these qualities as characteristics of a good worker: a good record of attendance and promptness, apparent interest in the job, the ability to follow directions, the ability to project a positive self image, willingness to "look" for work to do, and good interpersonal skills. Considering those students with whom she had been involved, she found most possessed adequate clerical skills, were interested in their work, and in general were productive workers. Attendance and promptness were good. General office routine was well handled, although many were weak in telephone communication skills. A definite handicap existed in their abilities to project a positive self image. The student who was excessively shy was often perceived to be disinterested. As a final comment she strongly supported the PALS concept and viewed it as a good approach to helping students make vocational decisions. Sally apparently had rather positive experiences with cooperative education students, but like many others, she voiced concern regarding their lack of important basic skills.

Jim Barkley is co-owner and personnel manager of a small plastics supply company. The company employs approximately twenty people. Jim stressed the importance of first impressions, stating that many employers took great notice of personal appearance and would not hire unkempt unclean persons in spite of their qualifications. This employer felt the ability to get along with co-workers was as a prerequisite. He cited the need for a "give" as

well as a "take" attitude and the willingness to give "a little extra". He felt that most employers want two-way communication. Employees must be able to communicate with their employers, but they must realize that decisions rest with management. He described good employees as being able to: express themselves verbally, show respect for management, have emotional control, get along with fellow workers, have a good attitude toward the job, and "give a day's work for a day's pay". He suggested that schools encourage development of: communication skills, both speaking and writing; employability skills, in interviewing and job seeking and skills in goal setting and achievement; and, appropriate work attitudes and basic skills. Jim holds strong views on what an employer looks for in an employee. He takes the personal approach as exemplified by his statement, "fit the person to the job, not the job to the person." Equally strong is his feeling that schools can encourage the development of many of the necessary skills.

Sam Altman is personnel director for a large engineering firm, and is responsible for interviewing all new employees. He felt that schools and employers must work together, and that neither had been cooperative in the past. He advocated employers as role models, resource people and employers of work education students. Mr. Altman voiced strong support for the PALS philosophy and program, and felt that the program could benefit any person entering any field. He urged that work experience

be provided for all students. He encouraged schools to develop mini-courses in the areas of math, English, and communication geared to specific job fields, and felt that employers could be of great help in setting up these kinds of programs. In the manner of other employers, Mr. Altman expressed concern for unrealistic expectations of youthful employees. He perceived them as unable to accept failures, or surmount obstacles in their paths. He viewed the young worker as unable to set goals and develop plans to achieve them. He had found most young job applicants difficult to interview. They frequently lacked knowledge of the job for which they were applying. In addition, they appeared to lack interest in any particular area. Although most of his company's hirees are "specialists" which must be "imported", a training program does exist. An applicant with a strong interest in learning and good attitudes toward work in general would certainly be considered, even though he lacked specific skills. Sam would institute career classes which give students practical information such as how and where to get job information. This gentleman voiced strong support for cooperative efforts between education and business personnel. In addition, he echoed other employers in their concern for increased student responsibility and a reorientation of job expectations.

John Walsh manages a retail food store. In addition, he hires and fires employees, interviews job applicants, and supervises co-op students. He perceived the school

as being able to teach many skills, but felt that job skills could be provided only by company or trade schools. Mr. Walsh stated, "The co-op program is a ready made employment agency," but urged careful screening, since most employers do not want to bother with the student whose sole interest is money. John would support strongly a school-run retail store which involves students in all aspects of the business. He would include overall management operations, ordering, selling, inventorying, stocking, customer relations, profit and loss, and bookkeeping. He looked upon small businesses and companies as needing to operate as a "family" of versatile members rather than a group of specialists. This employer, like many others, emphasized the importance of first impressions, seeking in new employees cleanliness, neatness, and interest in getting a job. Perseverance, on this employer's list of admirable qualities, ranked high. Average intelligence, strong basic skills, and the ability to talk with customers were equally important. He was concerned that schools are giving students adequate training in math, communication, and grammar. He would like to see applicants be more aware of jobs available, and, in particular, to have some prior knowledge of the jobs they seek. John viewed the acquiring of work skills as a process which should occur on the job. His feelings about the schools are somewhat negative, as indicated by his concern for basic skill deficiencies.

Summary

Employer interviews provided information pertaining to what employers perceive as important qualities of new employees, the school's role in developing these qualities, and suggestions about methods the schools might use. Most employers supported the concepts of cooperative education and PALS. Many were willing to be active participants. Criticism was offered in a constructive manner, designed to strengthen a basically sound program. Comments relating to youth were generalized to include all young workers and not leveled at specific individuals. Employers want employees with strong basic skills. They must be able to read, figure, and communicate well in writing and speech. Concern was voiced for youths' lack of incentive, and self-knowledge, as well as for their apparent unrealistic expectations for high pay, promotion, and material possessions. Employers viewed the schools as the appropriate place to gain skills in all of these areas. They offered suggestions, and expressed a willingness to involve themselves in program planning. Implications from the consolidation of employer responses indicate strong support for cooperative education programs. In addition, we perceive an obvious willingness on the part of employers to be a part of the planning and development of these programs, suggesting a veritable weaith of talent as well as manpower which might be utilized by the schools.

Dear Pontiac Area Employer:

The Pontiac School District is evaluating its vocational education program to determine how well it serves the needs of its students and local area employers and to find out ways of improving our service. As part of this evaluation we are contacting employers who have hired former students of Pontiac Schools. Your company was selected from lists of such employers.

We are asking you to tell us some things about Pontiac students in general and, if you have participated in any work experience programs sponsored by the Pontiac Schools, to share your opinions about those programs.

You need not identify yourself by name. However, so that we will be able to maintain a record of completed and returned forms, we ask that you fill out the enclosed postcard. Drop the card in the mail separately from your questionnaire. In that way we will know that your company has been able to answer our questionnaire without attaching your name to the response.

If you have questions regarding the questionnaire, please contact any member of the staff. Thank you for the courteous and prompt response to our request. Your cooperation will aid in the success of this project.

Sincerely yours,

Jean Rosenthal

SURVEY OF EMPLOYERS
SCHOOL DISTRICT CITY OF PONTIAC

SECTION I: FOR ALL EMPLOYERS

BEGIN DECK I

1. What is the name of your business or company?

_____ 1-3/
(WRITE NAME OF BUSINESS)

2. What is your job title with this company?

_____ 4-5/
(WRITE YOUR JOB TITLE)

3. Please describe briefly the product(s) or service(s) which your company provides.

_____ 6-7/

_____ 8-9/

_____ 10-11/

4. How many persons does your company currently employ?

_____ 12-14/
(NUMBER OF EMPLOYEES)

5. In general, how would you describe the employment market in Pontiac-would you say there are more than enough competent people to meet your employment needs, just about enough people who are competent, or too few people who are able to do the work you need done?

More than enough 1 15/

Just about enough 2

Too few 3

I'm not sure 4

6. Here are some comments which employers make about people they hire. Please indicate whether you agree or disagree with these statements.

	I'd agree with that	I'd disagree with that	I'm not sure	
A. It is the company's responsibility to train employees to do the jobs they are hired for.	1	2	3	16/
B. A person who has worked at a job before is a better employee that someone who has just finished school.	1	2	3	17/
C. It is pretty important for an employee to be able to get straight what his boss is talking about.	1	2	3	18/
D. I don't care how a person feels about work as long as he does his job.	1	2	3	19/
E. High school vocational education does a good job in preparing people to work for my firm.	1	2	3	20/
F. Schools don't do much in the way of teaching kids about the real world of work.	1	2	3	21/
G. Schools should concentrate on the three R's and leave work skills to the employer.	1	2	3	22/
H. A good training course in high school is as good as previous experience in preparing people for jobs.	1	2	3	23/
I. Young people today don't try to make a good impression when they look for jobs.	1	2	3	24/
J. All students should be required to have some actual work experience before they graduate from high school.	1	2	3	25/
K. It is too costly to train new employees for their jobs.	1	2	3	26/
L. Anybody I hire must be able to get along with other workers.	1	2	3	27/
M. Without good references employers are hesitant to hire new employees.	1	2	3	28/
N. High schools aren't really able to teach people how to do most jobs.	1	2	3	29/
O. Young people today don't know how to talk to adults and learn from them.	1	2	3	30/
P. The schools should teach students that it's important to have a good job and do it well.	1	2	3	31/
Q. It's getting harder to find new employees who are willing to work hard and do a good job.	1	2	3	32/
R. Unless kids learn to come to school everyday they will miss work whenever they feel like it.	1	2	3	33/

7. Below we have listed some characteristics which a good employee has. Please rate graduates of Pontiac schools on each of these characteristics. Would you say Pontiac graduates are better than your average worker, about as good as your average worker, or not quite as good as your average worker in each area?

	Better than average worker	About as good as average worker	Not quite as good as the average worker	I'm not sure	
A. can read, write and do the math necessary for the job.	1	2	3	4	34/
B. uses good sense in making decisions on the job.	1	2	3	4	35/
C. wears clothes which are right for the job.	1	2	3	4	36/
D. makes sense in what he says.	1	2	3	4	37/
E. gets along with supervisors and other workers.	1	2	3	4	38/
F. already knows how to do the job they are being hired for.	1	2	3	4	39/
G. always tries to do a good job at work.	1	2	3	4	40/
H. comes to work on time and is rarely absent.	1	2	3	4	41/

8. In general, how would you rate the job which the Pontiac Schools do in preparing people for work - would you say they do a very good job, a fair job or a poor job of training students?

Very good job 1 42/

Fair job. 2

Poor job. 3

9. Have you ever used the placement services of the Pontiac Schools to locate new employees?

Yes 1 43/

No 2

IF YES:

A. How would you rate those placement services-would you say they were very helpful to you, somewhat helpful, or not helpful at all?

Very helpful. 1 44/

Somewhat helpful. 2

Not helpful at all 3

10. While you were in school, did you take any vocational education courses?

Yes, I took many courses in vocational education, Co-Op, or industrial arts.	1	45/
Yes, I took some vocational, Co-Op, or industrial arts courses even though my program was General or College Prep.	2	
No, I did not take any vocational education, Co-Op, or industrial arts courses	3	

11. While you were in school, did you participate in any work education programs?

A. Cooperative Education (Co-Op)	1	46/
B. Work-Study Programs	2	
C. Apprenticeship.	3	
D. Other	4	

12. Has your company ever participated in any of the following work education programs?

	Yes	No	
A. Cooperative Education (Co-Op)	1	2	47/
B. Pontiac Adult-Student Learning System (PALS)	1	2	48/
C. North-East Oakland Vocational Center (NEOVEC)	1	2	49/
D. Project Growth	1	2	50/
E. Vocational Adjustment Program	1	2	51/
F. Other	1	2	52/

IF YES TO ANY OF THE ABOVE PROGRAMS:

Please complete the remainder of this questionnaire.

IF NO TO ALL OF THE ABOVE PROGRAMS:

Stop here. Do NOT complete the remainder of the questionnaire.
THANK YOU FOR YOUR COOPERATION.

SECTION II: FOR PAST AND PRESENT EMPLOYERS OF CO-OP AND WORK EDUCATION STUDENTS

13. The success of Co-Op or work education programs depends on these factors. How satisfied are you with each of these:

	Satisfied	Dis-satisfied	Do not know	
A. On site visits by coordinators	1	2	3	53/
B. Employer-coordinator planning	1	2	3	54/
C. Support from coordinators	1	2	3	55/
D. Amount of time students are available	1	2	3	56/
E. Grading system for students	1	2	3	57/
F. Matching of students with jobs	1	2	3	58/
G. Work habits of students	1	2	3	59/
H. Student productivity	1	2	3	60/

14. Please list below any advantages/disadvantages you feel work education programs have for employers.

Advantages		Disadvantages	
_____	61/	_____	64/
_____	62/	_____	65/
_____	63/	_____	66/

15. In general, how would you rate your company's experience with work education programs- would you say you were very satisfied, somewhat satisfied, or not at all satisfied with work education programs?

Very satisfied 1 67/

Somewhat satisfied 2

Not satisfied at all 3

16. Here are some statements about work education programs in the schools. Please indicate whether you agree or disagree with each comment.

	I'd agree with that	I'd disagree with that	I'm not sure	
A. There ought to be more work education programs.	1	2	3	68/
B. Graduates of work education programs are better workers than other new employees.	1	2	3	69/
C. More Pontiac employers should hire Co-Op students.	1	2	3	70/
D. It costs employers too much to participate in Co-Op programs.	1	2	3	71/
E. Employers should have more say in planning and teaching work education courses in the schools.	1	2	3	72/
F. Hiring work education students helps a business' public image.	1	2	3	73/
G. Most people around here don't know about work education programs.	1	2	3	74/
H. Work education experience helps when students look for jobs.	1	2	3	75/
I. Many work education students are kept on for full-time jobs.	1	2	3	76/
J. Being a work education employer doesn't help my business at all.	1	2	3	77/

78-80 Blk.
END
DECK I

THANK YOU FOR YOUR COOPERATION

Dear Pontiac Area Employer:

Recently we sent you a "Survey of Employers" questionnaire. Many Pontiac area employers have returned the questionnaire, but we have not received a response from you.

You could provide information that will be useful in the improvement of the vocational-cooperative education program (co-op). We need to know your ideas to better the relations between employers and the high schools.

Please return the enclosed questionnaire. It will take about fifteen minutes.

We are depending upon your participation. Thank you for cooperating.

Sincerely,

Stuart Packard

Dear

May I personally and professionally extend my appreciation for the opportunity to have talked with you about work education programs, employee characteristics, and our school performance.

Not only was the interview enjoyable but your opinions will add much needed information to our evaluation summary. We are currently in the process of combining questionnaire results and interview information.

Again, thank you for your assistance. I look forward to further opportunities to work with you.

Sincerely,

Tom Shara

PERSONAL AUTHOR: ROSENTHAL, JEAN; JOYCE, RONALD

DESCRIPTOR: *COST EFFECTIVENESS; *VOCATIONAL EDUCATION; *PROGRAM COSTS; *PROGRAM EVALUATION

IDENTIFIER: PONTIAC; MICHIGAN

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 114P.; RELATED DOCUMENTS VT 103 203 AND VT 103 204 AND VT 103 255 THROUGH VT 103 258 IN THIS ISSUE.

ABSTRACT: THIS COST EFFECTIVENESS STUDY WAS PART OF A PROJECT TO EVALUATE VOCATIONAL EDUCATION PROGRAMS IN THE PONTIAC, MICHIGAN SCHOOLS. IT WAS DESIGNED TO DETERMINE PROGRAM COSTS PER STUDENT AND TO COMPARE THESE COSTS BY FUNCTION ANALYSIS. THE STUDY DETERMINED THE COST PER ACADEMIC CREDIT FOR FACILITIES, EQUIPMENT, AND INSTRUCTION AND COMPARED THEM TO THE PER CREDIT COSTS OF NONVOCATIONAL PROGRAMS. THE GENERALIZED INFORMATION SYSTEM PROCEDURE, ALONG WITH RECORDS MAINTAINED BY DIRECTORS OF VOCATIONAL EDUCATION, SECONDARY EDUCATION, PERSONNEL, AND FINANCE, PROVIDED THE COST AND ENROLLMENT DATA FOR THIS REPORT. COSTS WERE COLLECTED BY FUNCTION CATEGORY, STUDENT ENROLLMENTS PER CLASS PROGRAM WERE IDENTIFIED, AND COMPUTATIONS WERE COMPLETED ON THE BASIS OF ANNUAL COSTS OF ONE-HALF CREDIT PER ENROLLEE. EDUCATIONAL COSTS ARE PRESENTED FOR THE FOLLOWING SIX FUNCTIONS: BUILDING COST OF THE ROOM, UTILITIES, MAINTENANCE, EQUIPMENT AND FURNISHINGS, CONSUMABLE SUPPLIES, AND SALARY. TABLES FOR ALL OF THESE DATA FOR THE TWO SCHOOLS IN THE DISTRICT PROVIDE DETAILED PROGRAM ANALYSIS COSTS. (NJ)

ACKNOWLEDGMENTS

The Research and Evaluation Department and the staff of the Decision-Oriented Evaluation System of the Pontiac Schools, express deep appreciation for the assistance received from many sources in the conduct of the study reported in this publication. The graduates of Pontiac Central and Northern High Schools and Pontiac area employers who responded to questionnaires and interviews were very cooperative and supportive of the study. The vocational and cooperative education staff members and the business management staff of the Pontiac School District who provided consultant service, made generous contributions of time and information. Special thanks to Mr. M.C. Prottengeier, Director of Vocational Education, and Mr. Donald Kaiser, Placement Consultant.

This publication was prepared pursuant to a contract with the Office of Education, U.S. Department of Health, Education and Welfare. Contractors undertaking such projects under Government sponsorship are encouraged to express freely their judgement in professional and technical matters. Points of view or opinions do not, therefore, necessarily represent official Office of Education position or policy.

FOREWORD

The preparation of students to become skilled, productive, and self-fulfilled workers is one of the schools' major functions. There is widespread concern among employers, labor organizations, and governmental agencies about the effectiveness of the schools' contribution to the skill preparation and work attitudes of young people. Such concern is not misplaced, for studies of the American work force indicate the strong presence of dissatisfaction, uncertainty, and hostility toward their jobs among American workers. In response to these evidences of unease about the role of work in the life of the nation, educational planners have given increasing attention to school programs which contribute to the work-readiness of youth.

The School District of the City of Pontiac, located in an industrial center and serving a working population, is very conscious of its responsibility to assist Pontiac students in making a successful transition from school to work. Recent years have seen substantial progress in our programs in career development, career education, and vocational education. We are proud of our progress, but we are aware that many of our students are not prepared sufficiently to cope with their uncertain vocational futures. The Decision-Oriented Evaluation System (DOES), a project funded under Part C, Vocational Education Act, and reported in part in this publication, has afforded the Pontiac schools an excellent opportunity to examine and evaluate portions of the district's programs in vocational education and work experience. The findings from the study will provide valuable information for school district planners and decision makers in determining future program directions. It is our sincere hope that the DOES report will be of assistance to other educators, as they examine their programs in vocational education.

A Cost Effective View

of

Vocational Education Programs

Introduction

The project from which this report is derived is entitled Decision Oriented Evaluation System for Alternative Work Experience Program (DOES) and was conducted by the Research and Evaluation Department of the Pontiac Schools, Pontiac, Michigan.

This component of the project was designed to determine program costs on a per student basis and compare program costs by function analysis. A detailed analysis of Pontiac's vocational education program was conducted to determine the cost per academic credit for facilities, equipment, and instruction and to compare them to the per credit costs of non-vocational programs.

Four major objectives formed the basis for this study of cost effectiveness of vocational education programs in the Pontiac Schools:

1. To determine the costs per unit of student credit of vocational education programs and compare them to the costs of non-vocational education programs.
2. To determine and compare the initial costs of constructing and equipping instructional facilities for the twenty-six vocational education programs and a non-laboratory example of a non-vocational education program.

3. To determine the cost per year of operating each of the twenty-six vocational education programs and a non-vocational education program.

4. To determine the existence and extent of difference in costs between high school vocational programs and the programs at the Northeast Oakland Vocational Education Center (NEOVEC).

The function system of cost analysis was used in completing the study, since it is compatible with a new accounting system to be installed in the Pontiac Schools in 1976-77 and provides cost data at the instructional program or course level. This particular system of cost analysis made it possible to measure the cost of resources for learning and to compute the costs necessary to deliver one-half credit per semester per enrollee on an annual basis. (Certain costs such as district administration, physical education, music, and many other costs normally associated with a comprehensive high schools are not included.)

Although it was anticipated that the cost of vocational programs would be higher than the costs of non-vocational programs, the variables producing these differences had not been measured and compared previously.

DATA COLLECTION PROCEDURES

Data Collection Procedures

In order to collect cost and enrollment data needed to conduct this study, the following procedures were used:

1. The Generalized Information System computerized program was printed in ledger format displaying all expenditures and encumberances for each high school in the school year 1974/75, as reported by the various departments and offices. It should be noted that many costs are not keyed to programs directly and therefore estimates were made.
2. The school district's inventory of property prepared by Manufacturers' Appraisal Company in 1975 was used for cost of reproduction values.
3. Student enrollment figures were obtained from records maintained by the secondary education and vocational education departments.
4. Salaries and paid benefits were made available from the directors of vocational education, personnel, and finance.

These procedures, with further explanation, are described in Appendix

The method used to describe and compare cost effectiveness data was as follows:

Costs were collected by function category; student enrollments per class program were identified; and com-

putations were completed on the basis of annual cost to deliver one-half credit per semester hour per enrollee in PCHS as well as NEOVEC.

This study did not endeavor to associate cost-effectiveness in any way with student performance or with quality of the educational process. Costs to provide resources for learning and educational services have been measured; educational benefits to students have not been measured. That is, the cost per unit of instruction was made known, not the amount of personal or societal benefits per dollar spent.

Educational costs were gathered and categorized by six functions to determine costs in vocational and non-vocational programs at PCHS.

1. Building cost of the room
2. Utilities
3. Maintenance
4. Equipment and furnishings
5. Consumable supplies
6. Salary (including fringe benefits and cost of living adjustments)

Administrative costs outside the building level were excluded from this study because the identification of their relationship to vocational education was extremely difficult.

The six functions were applied to each instructional program within the three vocational education areas of business, home economics, and in-

dustrial education, and to cooperative education and a typical non-laboratory, non-vocational education program. Further, an average annual cost of 20 percent for depreciation of facilities and equipment was computed.

ENROLLMENT DATA

Total Enrollments for Vocational Education and Non-Vocational Education

This table illustrates the total enrollment, non-vocational education enrollment, and vocational education enrollment for 1974-75. The total enrollment for business education courses equaled 43 percent of the vocational education enrollment. Home economics enrollment represented 17 percent, industrial education comprised 35 percent, and cooperative education had 5 percent.

CLASS ENROLLMENTS AND PERCENTAGES OF VOCATIONAL EDUCATION PROGRAMS AS COMPARED TO CLASS AND PERCENTAGE ENROLLMENTS OF NON-VOCATIONAL EDUCATION PROGRAMS FOR THE SCHOOL YEAR 1974-75 IN FCHS AND PNHS

TOTAL	46,615	100%
NON-VOCATIONAL	36,793	80%
VOCATIONAL EDUCATION	9,822	20%
BUSINESS EDUCATION	4,217	43%
HOME ECONOMICS	1,634	17%
INDUSTRIAL EDUCATION	3,456	35%
COOPERATIVE EDUCATION	515	5%

Business education sections accounted for 35 percent of the total vocational education sections. Home economics education sections represented 16 percent, industrial education sections comprised 38 percent, and cooperative education sections equaled 11 percent. This table illustrates enrollment and sections data.

VOCATIONAL EDUCATION PROGRAM ENROLLMENTS AND CLASS SECTIONS AS COMPARED TO NON-VOCATIONAL EDUCATION ENROLLMENTS AND CLASS SECTIONS IN PCHS AND PNHS DURING SCHOOL YEAR 1974-1975

ENROLLMENT	TOTAL	PCHS	PNHS
NON-VOCATIONAL EDUCATION ENROLLMENT	36,793	19,816	16,977
VOCATIONAL EDUCATION ENROLLMENT	9,822	5,500	4,322
BUSINESS EDUCATION	4,217	2,619	1,598
HOME ECONOMICS EDUCATION	1,634	968	666
INDUSTRIAL EDUCATION	3,456	1,669	1,787
COOPERATIVE EDUCATION	515	244	271
SECTIONS			
NON-VOCATIONAL EDUCATION CLASS SECTIONS	1,487	794	693
VOCATIONAL EDUCATION SECTIONS	463	255	208
BUSINESS EDUCATION	160	100	60
HOME ECONOMICS EDUCATION	73	43	30
INDUSTRIAL EDUCATION	177	89	88
COOPERATIVE EDUCATION	53	23	30

SITE SELECTION

Site Selection

The new Pontiac Central High School was used as the site for study of vocational education cost.

Although the Pontiac School District includes two comprehensive high schools which offer vocational training classes and the services of an area vocational center, Pontiac Central High School was selected as the site for this study for the following reasons:

1. Cost comparisons in this study focused upon vocational education and non-vocational education and the differences between the three vocational education program areas within the Pontiac School District as a whole rather than differentiating between the two high school plants for unique costs.
2. It was determined that costs could be accepted as alike since each building conforms to space requirements and serves similar school enrollments by curriculum, racial balance, and student count.
3. Pontiac Central High School is the newer high school building in Pontiac, opened for instruction in October 1973. Cost of construction would be more indicative of current construction costs than the Northern High School, which was completed seventeen years prior.
4. Records for the construction costs of PCHS were easier to obtain and were more complete.

COST ANALYSIS PROCEDURES

Selection of a Cost Analysis Procedure

In Michigan, it is still difficult to determine the allocation of funds at different grade levels because of limitations in the current procedures of budgeting and accounting. According to School Finance in Michigan, allocation determination is impossible for the researcher, on the basis of data reported to the state. In general, the costs for administration, attendance, health, operations and maintenance of plant, and fixed charges have been allocated to elementary and secondary levels on an equal basis. In terms of decision-making, an analysis of expenditures by educational level is essential. If policy-makers are to relate expenditure policy to objectives, they must know how much is spent for the education of students at the primary, intermediate, junior high, and senior high levels. Therefore, for the purpose of this study it was determined that "economics of scale" can only be used in terms of specific programs and services and not in terms of the entire program mix of a school district.

Excluded Costs

Studies of cost effectiveness may vary in the types of cost data collected and the mathematical techniques used to identify and compute cost. For the purposes of this study it was necessary to exclude certain costs which are described below: (This costing procedure does not include administration costs outside of the building level for these reasons)

1. These school district costs are unique in kind and method of payment.
2. The level of support services is unknown.
3. The level of service requirement in a given subject area is difficult to prorate.
4. State approved indirect rates are available to any school district.

According to "Report R0415" issued by the Michigan Department of Education's Department Services School Finance, indirect costs use the following account descriptions in their computation, and are calculated as that portion of data processing equipment, insurance expenses, total plant expenses, total plant operation expenses, and the salaries and administrative costs of the superintendent and assistant superintendents, business function, personnel function, centralized research, and other centralized administration and clerical personnel.

The total costs for the areas listed above are then taken as a percentage of total district costs as defined below and that percentage is

defined as an indirect cost rate--either on a "restricted" or "unrestricted" basis.

As cited in the article "Indirect Cost-Part Two" in the School Business Affairs periodical of November, 1974, indirect cost allocations are needed to approximate the true costs of courses and programs and to determine the impact of curriculum and teaching decision.

An indirect cost percentage can be used to approximate the true costs of a program by the allocation of administrative expenses to the activity. This is an approximation verified and approved by the Michigan State Department of Education. However, a single percentage, or rate, is used for all programs. In applying the same rate to vocational and non-vocational areas it is impossible to determine actual costs. However, current accounting systems lack the capability for multiple indirect cost rate computation. Conversion to an improved state accounting system in the school year for 1976-77 will change this situation and improve methods of calculating and using indirect cost rates. Other costs not accounted for include transportation and school lunch.

Cost Analysis by Function

The major advantage of using function cost analysis lies in the area of management based decisions. In order to measure or compare specific programs and/or services, it is more accurate and reliable to use the concept of function cost analysis because of the spectrum of both vocational and non-vocational programs. Function cost analysis also makes it possible to measure the effect of program variations such as class size, teacher salaries, space allocations and equipment expense, replacement and depreciation.

FUNCTION I
BUILDING AND SITE
(PCHS)

Cost Components Used for Computation in Each of the Six Functions for Pontiac Central High School

Function I: Cost per Room (PCHS)

The site cost of PCHS was $650,000. To retain architectural services and complete the construction of the building, a cost of $15,479,000 was incurred. A total of 400,070 square feet was completed for $16,129,000. Per square foot, the average cost was $40.32. Each room's value was determined by multiplying the actual square footage by the cost per square foot. No allowance was considered for depreciation based upon the building's expected useful life, although a method showing an annual depreciation of building and equipment at three and eight percent, respectively, is later included. Also, annual straight line depreciation of equipment and loss of dollar buying power is shown later in this study.

PCHS site cost	$ 650,000.
PCHS building cost	15,479,000.
	16,129,000.
PCHS total square footage	400,070
PCHS square footage for vocational education	39,495 (11%)
PCHS square footage for non-vocational education	131,390 (33%)
PCHS square footage for common area	229,215 (56%)
PCHS cost per square foot	$40.32

FUNCTION II
UTILITIES
(PCHS)

Function II: Utilities (PCHS)

The utilities consumed within PCHS amounted to $127,554 of electricity, $80,221 of gas, $5,252 of telephone, and $21,234 of water and sewer for a total of $234,261 for SY 1974-75. Per square foot, the average cost was $0.59. Each program's utility cost was determined by multiplying the actual square footage by the cost per square foot.

FUNCTION III
MAINTENANCE AND OPERATIONS
(PCHS)

Function III: Maintenance and operations (PCHS)

The maintenance and operations costs for PCHS included $200,737 for labor, $32,374 for specific supply charges and $134,135 for apportioned supply charges totaling $367,246. Per square foot, the average cost was $0.92. Labor accounted for the total salaries and fringe benefits for engineer and custodial personnel of PCHS. Specific supply charges were those costs designated for maintenance and operations. Apportioned supply charges were obtained by computing the percent of square feet in PCHS as compared to the square feet of the total buildings maintained by the school district. These proportions were used for those funds held in a control or overall account unallocated specifically to any one building or area. Unallocated funds are used for labor, supplies, contracted services, and replacement of equipment.

Labor----------	$200,737
Specific Supply Charges--------	32,374
Apportioned Supply Charges-----	134,135
	$367,246

FUNCTION IV
EQUIPMENT AND FURNISHINGS
(PCHS)

Function IV: Equipment and Furnishings (PCHS)

The current cost of reproduction value assigned to the equipment and furnishings of PCHS was $165,951 for business education programs, $73,483 for home economics education programs, and $295,420 for industrial education programs for a total of $534,854. The cost of reproduction value assigned to the equipment and furnishings of PCHS used in non-vocational education programs was $327,256. These values were determined by the Manufacturer's Appraisal Company. Per program capital outlay assessments are itemized within the Appendix section.

VOCATIONAL EDUCATION		$ 534,854
Business Education	$165,951	
Home Economics Education	73,483	
Industrial Education	295,420	
NON-VOCATIONAL EDUCATION		327,256
COMMON		6,604,886
TOTAL		$7,466,996

Annual Depreciation of Equipment and Effects of Inflation

A value for depreciation of equipment for each vocational education program offered was calculated on a straight line basis. These calculations were done to present an approximation of the annual costs per year per program involved in equipment.

Certain assumptions were made in developing these approximations, namely:

1. The value of equipment items is reasonably accurate. (As cited in the Manufacturers' Appraisal Inventory of 1975)
2. Cost increases in equipment would follow or maintain a relatively constant rate of increase.
3. Straight line depreciation would be used to develop an annual value or cost rather than to apply total replacement costs at time of repurchase or replacement after normal life span.
4. An inflation rate of 7% represents an approximation of future inflationary trends.
5. Each piece of equipment would operate over its expected normal life and would be replaced at the end of its normal life.

In this study the figures listed as " cost of reproduction" do not include any accrued depreciation, and are simply defined as the actual value at this point in time. Therefore, these figures are not necessarily the values that might be established for worth for insurance purposes in event of catastrophe. They are used solely as a benchmark to establish a starting point for comparitive purposes.

As equipment items "wear out" or reach the end of their defined "normal

life," the purchase price and/or normal life of the item replacing them may differ as a result of the costs of raw materials, labor, technology, etc. in effect at the time of replacement.

Since some degree of inflation, or loss of buying power might be expected to continue in the future, an effort was made to account for the future inflationary effects—annual decrease in dollar buying power—by using "present worth" values cited in Managerial Finance (Weston, 1962:644). In these calculations, the time-value of money is considered. In essence, the value of the dollar is discounted at a 7% rate per year over the normal life span of the equipment.

Equity funding is not currently allowed or defined in the accounting practices of school districts. Business and industries exercise capital funding decisions based on considerations of depreciation, earnings, rate of return on investment, etc. Industries may consider capital spending decisions and funding in, or by, various methods of payback, average rate of return, internal rate, present worth, or combinations of these methods and others. The accounting treatment of these methods may also vary. School districts are not able to "write-off" or depreciate equipment by definition. Nor can a school district set aside or essentially "save" monies on a long term basis for replacement of equipment -- and profit from the coincidental interest or return from savings or investments of such funds. School districts must either budget for replacement on a simple annual basis taking a year's needs as they arise, or seek capital funds through the issuance of bonds. Future returns on investments and savings are not defined for schools.

The following exercise was developed to indicate the order of magnitude of annual costs necessary to cover equipment that is "wearing out." To put this calculated figure in perspective, it is presented in terms of discounted dollars, or the amount actually necessary in future years to cover expenditures--somewhat like an annuity. However, no effort has been made to reduce the annual dollar amount for the effects of the return or interest that could be made, were accumulations to be saved in some type of interest bearing manner. The figures developed are primarily intended as benchmarks to allow the reader to develop a perspective of the amounts that should possibly be considered when contemplating on-going programs.

FUNCTION V

CONSUMABLE SUPPLIES

(PCHS)

Function V: Consumable Supplies (PCHS)

Consumable supplies are classified two ways. General consumable supplies include paper, pencils, notebooks, chalk, rulers, staples, tape, etc. These supplies are used in all classes. In addition, money for specific consumable supplies are budgeted for the business education, home economics education, and industrial education programs. The average encumbrance for general supplies is $93 per classroom teacher for ten class sections annually. Textbooks and library materials were valued at $177,012 and $202,886 respectively. These costs were not included in this function's computation, but rather were considered as a common commodity and difficult to prorate fairly.

FUNCTION VI
SALARY AND COST OF LIVING
FOR
TEACHERS, ADMINISTRATORS
AND
THEIR SECRETARIES

(PCHS)

Function VI: Salary, Fringes and Cost of Living for Teachers, Administrators, and Their Secretaries (PCHS):

The expenditures for salary, fringe benefits and cost of living adjustment for the 95 teachers ($1,410,815), four administrators ($124,675), and their four secretaries ($75,164) amounted to $1,610,654. The 95 teachers included 72 for non-vocational education, 10½ for business education, four for home economics education, and eight and one-half for industrial education classes.

The average annual teaching salary per vocational education area and non-vocational education was computed. The average annual business education teaching salary was $15,346, home economics education was $15,298, and industrial education was $13,394. The average annual salary for the 95 teachers in PCHS was $14,850. The fringe benefits and cost of living adjustment was an additional 13.6 percent per average annual salary.

The cost of ten annual class sections for administrative and secretarial salary was determined by dividing the total teachers (95) into the amount paid to the administrators and their secretaries ($199,839) for an average of $8.00 using the actual enrollment of 25,316 semester students.

The non-vocational salary cost was determined by considering the total cost for instruction ($1,410,815) and dividing that by the total number of teachers (95). This procedure was used instead of the pure cost for non-vocational education which can be calculated simply by subtracting the vocational education salaries from the total. The result is that the non-vocational education costs are inflated since the special services

such as librarians, counselors and other non-load bearing teachers are absorbed totally by these non-vocational education enrollees.

Total salary cost of $1,410,815 for 95 teachers yields an average of $14,850 per teacher. The records show an annual average of 250 enrollees per teacher, resulting in a cost of $59 per enrollee per one-half credit a semester. The added $8 for administration results in a total cost of $67 per enrollee.

Column Description for the Function VI Table

Area

This describes the two major divisions, vocational education and non-vocational education plus an average for the total building. Enrollments are based on actual counts within classes.

Average Teacher Salary

The actual salary paid to teachers within each area. An average of 13.6 percent of the salary is included in these figures for fringe benefits.

Number Teachers

The number of teachers per year assigned to each area.

Total Salary

This column is determined by multiplying the salary per teacher times the number of teachers.

Number of Class Sections

The number of semester sections operated during the school year 1974-75.

Number Students

Grade reporting records were used to gather the actual number of students in the classes at the end of the fourth Friday each semester.

Average Class Size

The arithmetic mean of the class size arrived at by simply dividing the number of students by the number of sections.

Cost Per Enrollees

The salary costs for that area divided by the actual number of students enrolled in that area.

Administrative Salaries

The administrative average cost per student based on administrators, secretaries, and the salary total of $199,839 and an enrollment of 25,316 students.

Total Cost

The sum of the average cost per enrollee plus the associated administrators.

PCHS

VI.	Salary & Fringes	16,584		72

*Data assumes an area of 96 square feet. Annual Cost per enrollee is based on 230 students per teacher-coordinator.

*Replacement costs based on a 22% of cost of reproduction per year.

COSTS BY FUNCTION
FOR
NON-VOCATIONAL CLASS ROOMS
(PCHS)

PCHS

NON-VOCATIONAL EDUCATION ROOM
(A non-Lab Room)

COSTS BY FUNCTION*

Function I - Building and Site

The average classroom size for PCHS is 780 square feet. At a cost of $40.32 per square foot, the construction cost is $31,450. Prorating this over thirty years, with 250 students per year yields an average cost per student per semester of $4.20.

Function II - Utilities

Using the same utility cost figures as used for the vocational rooms the annual utility cost is $460 per year, ($0.59 X 780 = $460) or as a per student basis this results in a cost of $1.90 per student per semester.

Function III - Maintenance and Operation

Once again, using the vocational education figure of $0.92 per square foot produces a $2.90 cost per student per semester. ($2.90 X 780 = $718, $718/250 = $2.90)

Function IV - Equipment and Furnishings

The average cost of equipment a classroom is $3,500. Using the same classroom depreciation and inflation adjustment procedure developed for the replacement cost in the vocational program, the average cost per student per semester is $800/230 = $3.20. The present equipment

worth required per year is approximately $800. This is on a 10-15 year normal expectancy for the furnishings.

Function V - Consumable Supplies

The average supply budget per teacher is $93. This yields a ratio of $0.37 per student per semester.

Function IV - Salary and Fringe Benefits

The average allocation required to operate a non-vocational teaching station is $14,850. This is based on the annual salary cost of $1,410,815 for 95 teachers. This averages $60 per student per semester.

SUMMARY TABLE

Function:

I	Building and Site	$ 4.20
II	Utilities	2.00
III	Maintenance - Operation	3.00
IV	Equipment and Furnishings	3.20
V	Consumables and Supplies	.37
VI	Salary and Fringe	60.00
	Total	$72.77

The average cost to reserve a slot for a semester for a student for a student in a non-lab type course is $72.77.

PCHS

Non-Vocational Education Room
(A NON-LAB ROOM)

COSTS BY FUNCTION*

Function Number	Description	Cost Per Square Foot	Annual Cost for 10 Class Sections For One (1) Year	Annual Cost Per Enrollee Receiving 1/2 Credit Each

*Data assumes an area of 780 square feet. Annual Cost per enrollee is based on 250 students per room.

SUMMARY OF COSTS
AT
(PCHS)

These data reflect the cost within each function based upon one-half credit per semester.

Cost Description

I.A. Building and site costs based on area of installation. Does not include ancillary space such as hall, administrative office, etc. ($40.32 per sq. ft.)

I.B. Same as I.A. amortized over 30 years. The average life of a building is generally consider to be 50 years. The 30 year figure is used to reflect renovation, inflation, and obsolescence.

II. Utility costs based on area ($0.59 per sq. ft.)

III. Maintenance and operation based on area of facility. (o.92 per sq. ft.)

IV. Equipment and furnishing. This reflects the reproduction value of the equipment and furnishing adjusted to reflect normal life expectancy and inflation (7%).

V. Consumable Supplies - These costs do not include text books, or library facilities. The cost is based on department records and averages used. Not included in these costs are the recaptured monies acquired through production and personal jobs performed by the various shops including auto tune-ups, graphics, production, etc.

VI. Salary - This includes direct cost of instruction along with other administrative facilities. Since many teachers have classes in several areas within a program or department, the costs per program was based on average salary of teacher within the department.

VII. Total cost per one-half credit per semester credit excluding building and site (Function I).

VIII. Total cost per one-half credit per semester credit including the amortized building and site fund.

IX. Salary to total ratio include the fractional part of the total cost that the salary function contributes, excluding building and site costs.

X. Salary Index - The factor which when multiplied by the average salary will produce reasonable estimates of the program cost.

GENERAL DEPRECIATION SCHEDULE
(PCHS)

General Depreciation Schedule

Annual Depreciation of Building and Equipment at Three and Eight Percent, Respectively

The following is a description of an alternative procedure for determining annual depreciation of buildings and equipment.

As a general rule, the Michigan State Department of Education computes an annual depreciation rate for school buildings at three percent and the equipment and furnishings at eight percent (Thomas, 1968:165).

Assuming that PCHS values are representative of an average high school, the following calculations would represent valid cost depreciation per year.

Function I: Bldg. cost

TOTAL VOC ED		$1,720,172
Bus Ed.	$405,014	
Home Ec.Ed.	447,875	
Ind. Ed.	867,283	

Expected Life of Bldg: 50 years
Depreciation rate per year: 3 percent

TOTAL VOC ED ANNUAL COST		$ 51,604
Bus. Ed	$ 12,150	
Home Ec. Ed.	13,436	
Ind. Ed.	26,018	

Function IV: Equipment and Furnishings

TOTAL VOC ED		$ 534,858
Bus Ed.	$165,953	
Home Ec. Ed.	73,485	
Ind. Ed.	295,420	

Depreciation rate per year: 8 percent

TOTAL VOC. ED. ANNUAL COST		$ 42,789
Bus Ed.	$ 13,276	
Home Ec. Ed.	5,879	
Ind. Ed.	23,634	

FUNCTION I
BUILDING AND SITE
(NEOVEC)

Cost Components Included in Each of the Six Functions for NEOVEC

Function I: Cost per room

The costs of the architectural services and construction for NEOVEC amounted to $1,821,300. A total of 55,107 square feet was completed. Per square foot, the average cost was $33.05. Each room's value was determined by multiplying the actual square footage by the cost per square foot. No allowance was considered for depreciation based upon the building's expected useful life.

NEOVEC building cost----------$1,821,300

NEOVEC total square footage----------$55,107

NEOVEC square footage for vocational education-----$41,767

NEOVEC square footage for common area----------$13,340

NEOVEC cost per square foot----------$33.05

Function I - Building And Site : NEOVEC

Program	Number of Square Feet Per Room	Cost For Classroom Facility	Cost Per Classroom Per Year	Cost Per Enrollee Per Semester
Appliance Repair	2,176	$ 65,379	$ 311	$10
Auto Body 1 ½	3,808	114,413	422	15

FUNCTION II
UTILITIES
(NEOVEC)

Function II: Utilities

The utilities consumed within NEOVEC amounted to $64,170 of electricity, gas, telephone, and water and sewer during SY 1974-75. Per square foot, the average cost was $1.16. Each program's utility cost was determined by multiplying the actual square footage by the cost per square foot.

Function II - Utilities : NEOVEC

Program	Number of Square Feet Per Room	Cost For Classroom Facility	Cost Per Enrollee Per Semester
Appliance Repair	2,176	$2,304	$10.97

FUNCTION III
MAINTENANCE AND OPERATIONS
(NEOVEC)

Function III: Maintenance and Operations

The maintenance and operations costs for NEOVEC included $57,558 for labor and supply charges for an average cost of $1.05. Labor accounted for the total salaries and fringe benefits for engineer and custodial personnel. Specific supply costs were those costs designated for use at NEOVEC. Apportioned supply charges were obtained by computing the percent of square feet in NEOVEC as compared to the square feet of the total buildings maintained by the school district.

Function III - Maintenance And Operations : NEOVEC

Program	Number of Square Feet Per Room	Annual Cost of Class/ Sec. Per Year	Annual Cost Enrollee Per 1½ Credit
Appliance Repair	2,176	$2,066	$ 9.84

FUNCTION IV
EQUIPMENT AND FURNISHINGS
(NEOVEC)

Function IV: Equipment and Furnishings

The current cost of reproduction value assigned to the vocational education equipment and furnishings of NEOVEC was $292,933. Per program costs of reproduction are listed in the Function IV table. These values were determined by the Manufacturers' Appraisal Company. The annual replacement budget amount for NEOVEC was based on the data student for PCHS. A rate of 20% was used as an average. The range is 18 - 22%.

Function IV - Equipment And Furnishings : NEOVEC

Program	Annual Cost	Cost/Repro/ Annual Cost/ 10 Sec./Yr.	Annual Cost/ Enrollee/ 1/2 Credit

Marine & Small Eng.	↓	↓	113.15
Welding	↓	↓	113.15

These data reflect the cost within each function based upon one-half credit per semester.

Cost Description

I.A. Building and site costs based on area of installation. Does not include ancillary space such as hall, administrative office, etc. ($40.32 per sq. ft.)

I.B. Same as I.A. amortized over 30 years. The average life of a building is generally consider to be 50 years. The 30 year figure is used to reflect renovation, inflation, and obsolescence.

II. Utility costs based on area ($0.59 per sq. ft.)

III. Maintenance and operation based on area of facility. (o.92 per sq. ft.)

IV. Equipment and furnishing. This reflects the reproduction value of the equipment and furnishing adjusted to reflect normal life expectancy and inflation (7%).

V. Consumable Supplies - These costs do not include text books, or library facilities. The cost is based on department records and averages used. Not included in these costs are the recaptured monies acquired through production and personal jobs performed by the various shops including auto tune-ups, graphics, production, etc.

VI. Salary - This includes direct cost of instruction along with other administrative facilities. Since many teachers have classes in several areas within a program or department, the costs per program was based on average salary of teacher within the department.

VII. Total cost per one-half credit per semester credit excluding building and site (Function I).

VIII. Total cost per one-half credit per semester credit including the amortized building and site fund.

IX. Salary to total ratio include the fractional part of the total cost that the salary function contributes, excluding building and site costs.

X. Salary Index - The factor which when multiplied by the average salary will produce reasonable estimates of the program cost.

NEOVEC Summary Costs By Program By Function

	I A	I B	II	III	IV A	IV B	V	VI	VII	VIII	Program Total	Fraction Sal./Ops. Budget	Sal. Index/ Ops. Budget

OPERATING BUDGET AT PCHS AND NEOVEC COMPARED

A Comparison of Operating Budgets at PCHS and NEOVEC for the 1974-75 School Year

Twenty-nine vocational training programs were offered at PCHS and NEOVEC during the 1974-75 school year. Of this total, only seven of the same program areas were taught at both PCHS and NEOVEC. When compared by salary and operating expenses several programs were found to cost more at NEOVEC than at PCHS while several were found to be less expensive. Since the title of the program does not necessarily reflect actual course content, the author found it impossible to make cost judgment. Fourteen more programs were offered at PCHS than at NEOVEC. The following pages identify those programs by area and school.

SUMMARY

Summary

The Generalized Information System (GIS) procedure, along with records maintained by the directors of vocational education, secondary education, and personnel and finance provided the cost and enrollment data necessary for this report.

To facilitate retrieval of costs by function per high school in Pontiac, the GIS computerized procedure was programmed with the cooperation of consultants of Oakland Intermediate School District (See Appendix B). Recording and computing costs by function is a method advocated by the Michigan State Department of Education in the Financial Accounting Bulletin 1022.

Four objectives were investigated with data describing vocational education and non-vocational education enrollees and expenditures by six costing functions.

The categories of functions included the following:

I Building cost of the room

II Utilities

III Maintenance

IV Equipment and Furnishings

V Consumable Supplies

VI Salary, Fringes, and Cost of Living

Conclusions:

Findings that resulted from the collection and categorization of data

were useful in drawing conclusions. Based on the findings of this study and assuming equivalent data in other school districts, the following conclusions are warranted:

Objective 1: To determine the costs per unit of student credit of vocational education programs and compare them to the costs of non-vocational education programs.

1. With the exception of cooperative education programs, each vocational education program costs more per one-half unit of student credit than a non-laboratory, non-vocational education program when compared by the salary index/operational budget formula.

Objective 2: To determine the initial costs of constructing and equipping instructional facilities for the 26 vocational education programs and compare them to the costs of non-vocational education facilities.

2. Constructing and equipping an area for a non-laboratory, non-vocational program was less expensive than for a vocational educational education program.

3. Based on annual cost per enrollee receiving one-half credit, the greatest expenditure occurred in industrial education followed in descending order by business education, home economics education, non-vocational education, and cooperative education.

Objective 3: To determine the cost per semester of operating each

of the 26 vocational education programs and a non-laboratory, non-vocational education program.

4. Based on annual cost per enrollee receiving one-half credit, the greatest expenditure occurred in industrial education, followed by home economics education, business education, non-vocational education, and cooperative education.

5. The greatest expenditure per program in each of three areas amounted to $421 in business education, $264 in home economics education, and $510 in industrial education.

6. The lowest expenditure per program in each of three areas amounted to $101 in business education, $102 in home economics education, and $169 in industrial education.

Objective 4: To determine the existence and extent of difference in costs between high school vocational programs and programs at the Northeast Oakland Vocational Education Center (NEOVEC).

7. Three out of seven programs (distributive education, clothing services, and child care) were more costly in NEOVEC than in Pontiac Central High School.

8. Four out of seven programs (food services, auto mechanics, electronics, and metal) were less costly in NEOVEC than in Pontiac Central High School.

9. Twenty-nine vocational education programs were offered in PCHS and NEOVEC.

APPENDIXES

APPENDIX A

ANNUAL DEPRECIATION PROCEDURES

Annual Straight Line Depreciation Procedures

The following procedure is an example for developing the annual straight line depreciation value (present worth required per year per program) in a school district, used in computing function 4.

Example: (figures used are PCHS Auto Program costs)

(1) A. Normal Life: (10 Years)
B. Cost of Reproduction: ($32,729)
(This amount is the total cost for all items in a program with the same expected normal life span)

(2) Depreciation per Year: ($3,273)

$$\frac{\text{Cost of Reproduction } (\$32,729)}{\text{Normal Life } (10)}$$

(3) Fraction of Program Total: (0.96)

$$\frac{\text{Depreciation Per Year } (\$3,273)}{\text{Total Depreciation for the Total Program per Year } (\$34,998)}$$

(4) Present Worth Index: (0.508)
A figure taken from "Table A-2: Present Worth of $1" (Weston, 1962:644)

(5) Weighted Present Worth: (0.49)
Fraction of Program Total (0.96) x Present Worth Index (0.508)

(6) Present Worth Required Per Year Per Program: ($6,848)

$$\frac{\text{Depreciation Per Year } (\$3,424)}{\text{Weighted Present Worth } (0.50)}$$

$6,848 represents the amount of capital needed annually to cover the cost of replacing all equipment upon expiration of normal life spans.

APPENDIX B

GENERALIZED INFORMATION SYSTEM (GIS)

MANUFACTURERS' APPRAISAL COMPANY

PROCEDURES FOR THE COLLECTION OF COST AND ENROLLMENT DATA

GIS

To facilitate convenient access to the financial records of PCHS AND PNHS, a computerized procedure known as Generalized Information System (GIS) was effected. Consultant expertise from the Oakland Intermediate School District designed the logical sequence of the GIS procedure and facilitated its run. The output from this procedure was printed in ledger format with the information organized in columns entitled the following:

(1) Responsibility Code - a two or three digit symbol indicating the responsible person and his/her immediate supervisor;

(2) Account Number - a four part series numbering. The first five digits designated the function and object, the second three digits indicated the building, the third three digits cited the activity, and the last three digits identified the course;

(3) Account Description - listed the purpose for which the funds were allocated;

(4) Fund Code - a single alphabetical symbol that represented the appropriate fund;

(5) Budget Allocation - the amount allowed for expenditure;

(6) Expenditures and Encumberances Year to Date - the amount subtracted in actual fund transactions and accounts contracted for payment;

(6) Available - the amount of funds remaining for expenditure in the school year.

In utilizing the GIS printout, data were grouped according to appropriate functions. The function cost data categories included building construc-

tion and site acquisition, utilities, maintenance and operations, equipment and furnishings, consummable supplies, and salary and fringe benefits.

MANUFACTURERS' APPRAISAL

During the SY1974-75, the Manufacturers' Appraisal Company, Philadelphia, Pennsylvania, was contracted to provide the school district with a complete inventory of property. The August 21, 1975, report submitted information for insurance and property control purposed, and set forth the cost of reproduction and the cost of reproduction less depreciation for the building, building fixtures, fixed equipment and movable furniture, fixtures and equipment. The report did not include land, supplies, automotive equipment or walks, paving, fences and playground equipment not covered by property insurance. Costs itemized in the inventory were categorized according to a building cost or a contents cost.

Each contents item was described by a sequence number, quantity, equipment code, item description (complete with serial number, where applicable), cost of reproduction by unit and by total, percentage of depreciation (for insurance purposes), and expected life based on year of purchase, normal life and remaining life.

ENROLLMENT AND COST DATA SOURCES

The enrollments of students per class section per program were transcribed from information compiled by the director of secondary education and by the director of vocational education.

Information on salaries, fringes, and fixed charges was obtained from the directors of personnel, finance and vocational education.

To measure the reported educational costs used to provide a unit of learn-

ing (a one-half semester credit), total costs per program were compared to (a) the total class sections per program and (b) the total students enrolled per program.

The costs incurred by NEOVEC were available on regularly issued print-outs categorized by vocation program. Enrollment data were furnished by the NEOVEC counseling staff.

APPENDIX C

GLOSSARY

GLOSSARY

1. Accountability - a relatively new concept that is virtually certain to receive increased emphasis in the years ahead. Accountability may be defined as "evidence of fulfilling a measurable responsibility assigned under certain conditions and constraints."

2. Bonded Money - money procured for school support through a general election process to be repaid to the holder of the bond until the bond matures. Money used for site, building (architect fees and construction), and original capital outlay.

3. Building Use Cost - The building use cost or building operating cost for a year is determined by dividing the original cost by its life expectancy.

4. Capital Outlay - An expenditure which results in the acquisition of fixed assest or additions to fixed assets which are presumed to have benefits for more than one year. It is an expenditure for land or existing buildings, improvements of grounds, construction of buildings, additions to buildings, remodeling of buildings, or initial, additional, and replacement of equipment.

5. Contracted Services- services rendered by people who are not on the payroll of the LEA and related expense covered by the contract.

6. Cost Accounting - that method of accounting which provides for the assembling and recording of all the elements of cost incurred to accomplish a purpose, to carry on an activity or operation, or to complete a unit of work or a specific job.

7. Cost Benefit - analyses which provide the means for comparing the resources to be allocated to a specific program with the results likely to be obtained from it; or, analyses which provide the means for comparing the results likely to be obtained from the allocation of certain resources toward the achievement of alternate or competing objectives.

8. Cost Effectiveness - analyses designed to measure the extent to which resources allocated to a specific objective under each of several alternatives actually contribute to accomplishing that objective, so that different ways of gaining the objective may be compared.

9. Depreciation - buildings and equipment should be depreciated on a straight line basis for a period of time corresponding to their life expectancy.

10. Decision-Making - with finances sometimes in short supply, school managers, boards of education and interested citizens are faced with setting priorities in programs and facilities. Decisions regarding facilities include their utility and aesthetic value; the number of square feet needed for an educational activity, and the size, utility, and landscape value of the site.

11. Direct Costs/In direct Costs - those elements of cost which can be easily, obviously, and conveniently identified with specific activities or programs, as distinguished from those costs incurred for several different activities or programs and whose elements are not readily identifiable with specific activities.

12. Employee Benefits/ Fringe Benefits - compensation, in addition to regular salary, provided to an employee. This may include such benefits as health insurance, life insurance, annual leave, sick leave, retirement, and social security.

13. Encumbrances - purchase orders, contracts, and salary or other commitments which are chargeable to an appropriation and for which a part of the appropriation is reserved. They cease to be encumbrances when paid or when actual liability is set up.

14. Equipment Use Cost - this is the cost of using a piece of equipment for a fiscal year.

15. Fixed Charges - charges of a generally recurrent nature which are not readily allocated to other expenditure categories. They consist of such charges as: school board contributions to employee retirement, insurance and judgments, rental of land and buildings, and interest on current loans. they do not include payments to public school-housing authorities or similar agencies.

16. GIS - Generalized Information System Computer program

17. LEA - local educational agency; synonymous with the terms school district, public school, intermediate education agency, and school system.

18. NEOVEC - Northeast Oakland Vocational Education Center

19.	Non-Vocational Education	-	all instructional programs not included within the areas of business education, home economics education, and industrial education.
20.	Operating Cost	-	means the total cost (direct cost, indirect cost, and the use cost of buildings and equipment) of all programs or activities for the current school fiscal year.
21.	PCHS	-	Pontiac Central High School
22.	PNHS	-	Pontiac Northern High School

TITLE: A FEASIBILITY STUDY FOR VOCATIONAL-TECHNICAL EDUCATION FOR THE CONCHO VALLEY AREA OF TEXAS.

DESCRIPTOR: *FEASIBILITY STUDIES; *VOCATIONAL EDUCATION; *POST SECONDARY EDUCATION; *NEEDS ASSESSMENT; PROGRAM DESCRIPTIONS; SURVEYS; EDUCATIONAL NEEDS; MANPOWER NEEDS; *ADULT VOCATIONAL EDUCATION

IDENTIFIER: CONCHO VALLEY; TEXAS

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 112P.

ABSTRACT: THE PURPOSE OF THIS STUDY WAS TO PROVIDE ANGELO STATE UNIVERSITY WITH INFORMATION CONCERNING THE POSTSECONDARY, VOCATIONAL-TECHNICAL EDUCATION NEEDS, RESOURCES, AND POTENTIALS OF THE CONCHO VALLEY REGION OF WEST TEXAS AND TO ASSESS THE FEASIBILITY OF COOPERATIVELY SERVICING THESE NEEDS. A LITERATURE REVIEW, PROJECT OVERVIEW, AND PROGRAM GOALS AND OBJECTIVES ARE PRESENTED AS AN INTRODUCTION. IN DESCRIBING PROCEDURES AND METHODOLOGY, THE ACTIVITIES ARE DETAILED UNDER THE ORGANIZATIONAL HEADINGS OF (1) ORGANIZATION, (2) SURVEY PROCEDURES AND INSTRUMENT DEVELOPMENT, AND (3) DATA PROCESSING AND ANALYSIS. THE FINDINGS ARE ORGANIZED INTO THE THREE DIVISIONS OF EDUCATIONAL NEEDS AND INTERESTS, OCCUPATIONAL NEEDS, AND EDUCATIONAL RESOURCES. EACH REPORT DIVISION CORRESPONDS WITH A MAJOR AREA OF INVESTIGATION AND CONTAINS A SUMMARY OF THE PRIMARY FINDINGS IN THAT SURVEY AREA. THE REPORT SUMMARIZES INTEREST EXPRESSED BY ADULTS REGARDING THE INDIVIDUAL CATEGORIES OF POSTSECONDARY EDUCATION, VOCATIONAL-TECHNICAL TRAINING AND EDUCATION, COLLEGE CREDIT PROGRAMS, AND INFORMAL ADULT AND CONTINUING EDUCATION. MAJOR CONCLUSIONS ARE REPORTED IN THE ORDER OF THEIR GENERAL IMPORTANCE TO THE PURPOSE OF THE STUDY. APPENDIXES (56 PAGES) PROVIDE INFORMATION PERTAINING TO THE THREE SURVEYS--THE EDUCATIONAL NEEDS AND INTEREST SURVEYS FOR SAN ANGELO AND FOR THE COUNTIES AND THE OCCUPATIONAL NEEDS SURVEY--AND ADDITIONAL DETAILS OF THE FINDINGS. ACKNOWLEDGEMENTS

The feasibility study project conducted by Angelo State University was made possible by a grant from the Division of Occupational Research and Development, Department of Occupational Education and Technology, Texas Education Agency. We are grateful to the Division Staff for their confidence, support, and assistance. Much of the important day-to-day work associated with the project was diligently and competently done by Annabelle Jones with valuable assistance from Geraldine VanEvery, both graduate student assistants for the project. Special thanks go to Helen Stone, project secretary, who skillfully managed the project office, and to Doris Yancey, who provided assistance with the typing of the large volume of material which flowed from the office. Dr. Fred L. Mahler, Dean of the College of Professional Studies, contributed valuable administrative assistance throughout the planning and execution of the project. Appreciation is also expressed to Dr. Bob C. Holcomb, Vice President for Academic Affairs, for his assistance in editing the final report, and to Dr. James Hademenos, Head of the Department of Education, for the support he provided the project staff. The project staff express their appreciation to Dr. Lloyd D. Vincent, President, Angelo State University, for his continuing interest in the project.

Important contributions were made by members of the Committee for a Feasibility Study of Vocational-Technical Education in both the initiation and execution of the study. Members of the committee and a working subcommittee were Dr. Fred Mahler, Dean of the College of Professional Studies, Angelo State University, Chairman; Dr. J. Noland Harvey, Associate

Professor of Education, Angelo State University; Dr. Raymond Sifrit, Jr., Assistant Professor of Distributive Education, Angelo State University; Dr. James Nevins, Superintendent of Schools, San Angelo Independent School District; Mr. Rex Lowe, Assistant Superintendent, San Angelo Independent School District; Mr. C.D. Henry, Director of Special Projects, San Angelo Independent School District; Mr. Charles Bitters, Executive Director, Region XV Education Service Center; Mr. Clyde Warren, Director of Instructional Services, Region XV Education Service Center; Mr. Larry Lusby, Coordinator of Guidance Services, Region XV Education Service Center; Mr. James Hinds, Concho Valley Council of Governments; Mr. Rocky Brookmole, Career Education Coordinator, Region XV Education Service Center; Mr. Horace Bargley, Administrative Consultant, San Angelo Independent School District, and Mr. Don Hale, Director, Adult and Continuing Education, Angelo State University. Very special thanks go to Mr. Horace Bargley for his extensive contribution to the survey activities of the project.

The study would not have been possible without the cooperation and contributions of a number of regional institutions and agencies. These organizations were: San Angelo Independent School District, San Angelo Board of City Development and Chamber of Commerce, and the Texas Employment Commission. Also, we are very grateful to the following school districts for assistance in the survey phase of the study: Bangs ISD, Blanket RHSD, Zephyr RISD, Santa Anna ISD, Eden ISD, Eola RHSD, Paint Rock RHSD, Rocksprings ISD, Irion County ISD, Junction ISD, Brady ISD, Lohn RISD, Miles ISD, Cherokee ISD, Sonora ISD, Grape Creek-Pulliam CSD, San Angelo ISD, and Wall ISD.

We also acknowledge the contributions of thousands of persons in the Concho Valley Area of Texas who participated in the surveys associated with

the project. We hope their contributions will be repaid by the continuing improvement of educational services in the area to which this study is dedicated.

CHAPTER I

INTRODUCTION

Orientation to the Study

This is the final report of a project titled "Feasibility Study for Vocational-Technical Education for the Concho Valley Area," funded and authorized by the Division of Occupational Research and Development, Department of Occupational Education and Technology, Texas Education Agency. The project was conducted by Dr. J. Noland Harvey, Associate Professor of Education. Administrative assistance to the project was provided by Dr. Fred L. Mahler, Dean of the College of Professional Studies. This report was written by Doctors Harvey and Mahler.

The study reported here was initiated out of the mutual concerns of the leaders of the educational institutions charged with the primary responsibilities of delivering the educational programs needed by the citizens of the area. These educational leaders were Dr. James Nevins, Superintendent, San Angelo Public Schools; Mr. Charles Bitters, Executive Director, Region XV Education Service Center; and Dr. Lloyd D. Vincent, President, Angelo State University. From its early planning stages the study has been a cooperative effort of the educational institutions within the Concho Valley area. Each of these institutions is strongly committed to the goal of improving the educational and occupational opportunity of the citizens of the Concho Valley area. This study was seen as a first and necessary step toward this goal.

Statement of the Problem

Purpose of the Study. The study was conducted to determine the need for vocational-technical education at the post-secondary level in a multi-county region of West Texas. The purpose of the project was to provide the prime sponsor, Angelo State University, with accurate, reliable information concerning regional post-secondary vocational-technical education needs, resources, and potentials and, based upon these findings, to assess carefully the feasibility of cooperatively servicing these needs. Such a needs assessment and feasibility study is necessary to the systematic development of program objectives and priorities that are relevant to both the educational needs of regional residents and the employment needs of regional business and industry. The study was also necessary to avoid unnecessary duplications of expensive programs in the development of new vocational-technical programs which will meet regional needs not presently served.

Review of Related Literature. The Vocational Education Act of 1963 and the Vocational Amendments of 1968 directed the attention of the nation to the critical need for technically skilled manpower in practically every field of commerce, industry, and business. The Vocational Amendments of 1968 (Public Law 90-576), established priorities for post-secondary programs, work study programs for needy students, adult programs, and programs and services for persons with special needs. (1) This keystone legislation stresses that occupational education planning be based on need and opportunity for trained manpower. (10)

Today, the critical need for technically skilled manpower is readily apparent. "It is estimated that within the next decade, approximately 50%

of the work force will be in technical, semi-professional and service-oriented jobs." (5) The Commissioner of the Bureau of Labor Statistics, Shiskin, in a prefatory note for the 1974-75 Occupational Outlook Handbook (U.S. Department of Labor), contends that accompanying a projected increase of as much as 20 million jobs in the next decade will be "a significant shift from goods-producing industries...toward service-producing industries." (12)

These current national projections are in keeping with the Texas Employment Commission 1971 statement of Texas employment outlook to 1975 which forecasted that the service industries in Texas would show a substantial growth (over 23%) in job opportunities during the first half of the 1970's. The report goes on to state that "the wholesale and retail trade industries will employ one out of four people working in Texas by 1975." (16) This projection is especially significant for educational and vocational planning. "To assure that young people will have the necessary skills to meet future job requirements will require flexibility in our educational systems and necessitates a continuing appraisal of career opportunities in the years ahead." (12)

Schaefer and Law, in their 1973 review of research on teaching vocational skills, stated that "the matching of vocational programs with appropriate manpower needs always has been a major challenge. Such a system, if properly functioning, reflects the delivery of youth and adults ready and willing to take existing jobs." (10) Venn concludes that the assessment of manpower demand is fundamental to "the successful utilization of a trained manpower supply,...(and) that this information is necessary for planning at secondary, post-secondary, college, and adult levels of education." (13)

However, it is not sufficient to determine the national employment projections in career areas. According to Crum and others, national employment projections provide little insight into regional needs. (4) This may be an especially valid contention when applied to a region such as the West Texas region. Wallace, in an article for the American Vocational Journal (1970), considered an assessment of the local employment community a major step in the development of any training program. (15) Voelker, in an article from the same journal (1972), said job availability must be known prior to launching any new programs. (14) Reviewing these and other sources, it seems appropriate to conclude that "an analysis of a specific region is necessary to provide relevant and realistic programs for present and future employment needs in that region." (4)

Today, there is a clear need for a feasible plan which will point to needs not presently served and will avoid unnecessary duplication of expensive programs. (16) A number of studies have been conducted to determine the manpower needs of a geographic region, including many in Texas, sponsored by the Division of Occupational Research and Development. The reports of these projects have been a major source of ideas and information concerning methodology.

Schaefer and Kautman, in a statewide evaluation of occupational education, reached the conclusion that "the potential of vocational education has not been and cannot be reached fully under the prevailing pattern." (9) Recently, the Dallas Morning News, in reporting education trends (August 11, 1974), stated that "occupational training and liberal arts study, once two divergent courses of post-secondary education, have merged on many state college and university campuses in the growing trend toward career

education programs incompatible with the broader perspectives and humanities emphasis of their liberal arts programs. On the contrary, administrators in state colleges and universities believe that the liberal arts atmosphere is a necessary benefit for career education students." (5) More precise evidence of this trend can be found in a study conducted by the American Association of State Colleges and Universities (AASCU) which found that approximately 50% of its 313 members offered less than baccalaureate level programs, including two-year associate degrees and some one-year certificate programs. (5) In summary, the literature clearly supports the current and continuing necessity for the assessment of regional occupational needs and demands with a trend toward four-year colleges and universities contributing to occupational and career education programs.

Initial Activities. Preliminary discussions between Dr. James Nevins, Superintendent, San Angelo Public Schools; Mr. Charles Bitters, Executive Director, Region XV Education Service Center; and Dr. Lloyd D. Vincent, President, Angelo State University, indicated that a feasibility study concerning post-secondary Vocational-Technical Education was needed for the Concho Valley region. Dr. James Nevins contacted Dr. John R. Guemple, Associate Commissioner for Occupational Education and Technology, Texas Education Agency, concerning a feasibility study for this region. Dr. Guemple arranged a meeting with Dr. Bevington Reed, Commissioner, Coordinating Board, Texas College and University System, for this purpose. Individuals in attendance at this meeting were: Dr. Bevington Reed, Dr. David T. Kelly, Division Head, Division of Program Development, and Dr. Raymond Hawkins, Director of Community College Programs, Coordinating Board, Texas College and University System; Dr. James Nevins, Superintendent, San Angelo

Independent School District; Dr. John R. Guemple, Associate Commissioner for Occupational Education and Technology, Texas Education Agency; Mr. Joe Godsey, Coordinator, Vocational and Technical Education, Texas Education Agency; and Dr. Fred Mahler, Dean, College of Professional Studies, Angelo State University.

After much discussion, it was the feeling of the group that a study to assess the need for post-secondary programs was needed. Dr. David Kelly discussed this situation informally with the Program Development Committee of the Coordinating Board on July 11, 1974. This committee gave its endorsement for the group to pursue a joint project to assess the needs and feasibility of post-secondary vocational-technical program development.

The following steps were taken to facilitate the initial planning of the project:

1. Angelo State University received approval from the Board of Regents, State Senior Colleges, to participate in the feasibility study on August 16, 1974.
2. Dr. James Nevins, Superintendent, San Angelo Independent School District, received approval from the San Angelo Independent School District Board of Education to participate in the feasibility study on August 20, 1974.
3. Mr. Charles Bitters indicated that Region XV Education Service Center would work closely with Angelo State University and the San Angelo Independent School District to assist in the project.
4. The Concho Valley Council of Governments agreed to assist with the project.

5. A joint committee was established on September 10, 1974, by Angelo State University and San Angelo Independent School District to facilitate the planning and execution of a feasibility study for vocational-technical education. The committee met and organized a sub-committee to proceed with the initial planning of the project.

Objectives of the Study

The purpose of the project was to provide the prime sponsor and other regional cooperating organizations with accurate, reliable information concerning regional post-secondary vocational-technical education needs, resources, and potentials and, based upon these findings, to assess the feasibility of cooperatively servicing these educational needs. Such a needs assessment and feasibility study are necessary to the systematic development of program objectives and priorities that are relevant to both the educational needs of regional residents and the employment needs of regional business and industry.

Within the purpose stated above, two broad goals were readily identified for the project. The first goal was to determine the categories and magnitude of need for post-secondary vocational-technical programs in the region. The second goal was to determine the resources available and required to develop programs to meet the needs. The objectives of the investigation follow.

Objectives associated with the first goal:

- To determine the categories and magnitude of need for post-secondary vocational-technical programs in the region.
- To obtain basic data concerning the financial and social

status of residents needing post-secondary vocational-technical programs.

- To determine the geographic location and distribution of residents needing post-secondary vocational-technical education.
- To determine the employment needs of business, industry, and government in the region.

Objectives associated with the second goal:

- To determine the existing and potential resources of regional public institutions and agencies applicable to servicing these needs.
- To determine the existing and potential resources of regional business and industry applicable to servicing these needs.
- To assess the feasibility of planning, organizing, administering, and operating needed post-secondary vocational-technical programs.

Overview of the Report

The findings of the research are found in Chapter III of this project report, and the conclusions of the study are organized in Chapter IV. Chapter II contains a description of the procedures and methodology employed in the study. Copies of the documents and instruments developed and used in the research are located in the appendix section of the report.

CHAPTER II

PROCEDURES AND METHODOLOGY

The activities of the project are detailed under the following organizational headings: (1) organization, (2) survey procedures and instrument development, (3) data processing and analysis.

Organization

An unusually high degree of inter-organizational cooperation and assistance was essential to the effective execution of the project and to the achievement of the ultimate purpose. To obtain the necessary assistance and to accomplish the desired purpose, the cooperation of the following organizations was enlisted: San Angelo Independent School District, Region XV Education Service Center, Texas Employment Commission, San Angelo Board of City Development and Chamber of Commerce, and Concho Valley Council of Governments. Major sources of information are listed below.

- Survey information concerning educational programs needed by business and industry as identified by the Concho Valley Council of Governments.*
- Needs of business and industry as identified by the San Angelo Board of City Development Industrial Committee.
- Employment needs as identified by the Texas Employment Commission of San Angelo.
- Information available from various departments at Angelo State University concerning new associate degree programs that may be needed in the future.

*It was later determined that the Concho Valley Council of Governments did not have these data as had been indicated during the planning phase of the study. Additional survey procedures were necessary to develop these data.

- Information supplied to the project by the Division of Occupational Research and Development, Department of Occupation and Technology, Texas Education Agency, Austin, Texas.
- Information available from the staff of the Coordinating Board, Texas College and University System.

The logistics of conducting a comprehensive survey of the post-secondary educational needs of the multi-county region would have been an overwhelming task for the prime sponsor to attempt without substantial cooperation and assistance from other regional institutions and agencies. The San Angelo Independent School District, Region XV Education Service Center, and the San Angelo Board of City Development and Chamber of Commerce made substantial contributions to the survey phases of the project. The remaining organizations listed above provided expertise in the areas of study planning and final evaluation.

One of the unexpected surprises of the study was the discovery, well into the project, that the employment needs data expected from area agencies involved in manpower development and employment were not available. This belated discovery necessitated the development by the prime sponsor of additional instrument and survey procedures. This unexpected surveying, however, provided area agencies with the most comprehensive and current data available on area employment needs.

To facilitate the necessary coordination and cooperation of organizations concerned with the proposed study, the Committee for a Feasibility Study of Vocational-Technical Education was established September 10, 1974, by joint action of the institutions involved. The purpose of this committee was to oversee the initiation and execution of the needs assessment and

feasibility study. The committee is listed below:

Dr. Fred Mahler, Chairman
Dean, College of Professional Studies
Angelo State University
San Angelo, Texas 76901

Dr. J. Noland Harvey
Associate Professor of Education
Angelo State University
San Angelo, Texas 76901

Mr. C. D. Henry
Director of Special Projects
San Angelo Independent School District
100 N. Magdalen
San Angelo, Texas 76901

Dr. Raymond Sifrit, Jr.
Assistant Professor of Distributive Education
Angelo State University
San Angelo, Texas 76901

Dr. James Nevins
Superintendent of Schools
San Angelo Independent School District
100 N. Magdalen
San Angelo, Texas 76901

Mr. Rex Lowe
Assistant Superintendent
San Angelo Independent School District
100 N. Magdalen
San Angelo, Texas 76901

Mr. Charles Bitters
Executive Director
Region XV Education Service Center
P. O. Box 5199
San Angelo, Texas 76901

Mr. Clyde Warren
Director of Instructional Services
Region XV Education Service Center
P. O. Box 5199
San Angelo, Texas 76901

On September 12, 1974, the committee established a sub-committee that developed or suggested many of the cooperative survey procedures described

in this section. The committee is listed below:

Dr. J. Noland Harvey, Chairman
Associate Professor of Education
Angelo State University
San Angelo, Texas 76901

Mr. James Hinds*
Manpower Clearing House Coordinator
Concho Valley Council of Governments
7 W. Twohig Building
San Angelo, Texas 76901

Mr. Horace Bargley
Administrative Consultant
San Angelo Independent School District
100 N. Magdalen
San Angelo, Texas 76901

Mr. Don Hale
Director
Adult and Continuing Education
Angelo State University
San Angelo, Texas 76901

Mr. Larry Lusby
Coordinator of Guidance Services
Region XV Education Service Center
P. O. Box 5199
San Angelo, Texas 76901

Dr. Raymond Sifrit, Jr.
Assistant Professor of Distributive Education
Angelo State University
San Angelo, Texas 76901

Survey Procedures and Instrument Development

Survey procedures for the project were necessarily varied and complicated because of the range of objectives to be met and because of the number of organizations contributing survey data to the study. It was planned that only selected areas of specialized follow-up and in-depth surveying would be executed by the prime sponsor alone. Substantial portions of the required data were obtained from surveys carried out by the regional agencies and

*Served as a member of the committee until January, 1975.

organizations assisting in the study. In other instances the prime sponsor developed survey items, specifically related to the project objectives, designed to "ride piggy-back" with these regional surveys. The primary example of this procedure was to have been the utilization of the School Census Survey as the vehicle for initial contact with residents in the region. However, when the Texas Legislature passed legislation no longer requiring the school districts to conduct the School Census Survey, alternative survey procedures were developed. Region XV Education Service Center personnel assumed some of the responsibility of working with area public school superintendents in their region to obtain the necessary data. In summary, the survey procedures of the project were designed to use effectively the survey efforts and assistance of supporting regional organizations.

Essentially, there were three areas which outlined the development of survey procedures. These three areas are outlined below along with a breakdown of the survey phases associated with each area.

- Educational needs and interests survey

  Phase 1: Initial resident interview

  Phase 2: Questionnaire follow-up (when necessary)

- Employment needs survey

  Phase 1: Initial survey of area business and industry employment needs survey

  Phase 2: Employment needs survey follow-up

- Training and educational resources survey

  Phase 1: Initial survey of training and educational resources

  Phase 2: Training and educational resources follow-up

<u>Educational Needs and Interests Survey</u>. The purpose of this major survey activity was to determine the educational interests and needs of

adults (persons 16 years of age and older) living in the Concho Valley area. The area was defined to include the counties of Brown, Coke, Coleman, Concho, Crockett, Edwards, Irion, Kimble, Mason, McCulloch, Menard, Runnels, San Saba, Schleicher, Sterling, Sutton, Tom Green and Val Verde. Counties of primary interest were the counties included in the Education Service Center, Region XV (see map in Appendix B). The survey of educational needs and interest activities were subdivided into two survey areas: (1) the survey of the San Angelo area persons and (2) the survey of persons in the remaining county areas.

San Angelo Survey: Because approximately 47% of the total population of interest was within the San Angelo area, this area received a large portion of the investigative time and resources. Also, the support and cooperation of the San Angelo Independent School District made it feasible to use an interview survey in the city for a more systematic and comprehensive collection of data. Because the San Angelo Independent School District was committed to undertake extensive door-to-door interviewing as a part of an Adult Basic Education research project, it was possible to coordinate the two survey activities to the advantage of both projects. The two project directors, with the advice of the Feasibility Study Committee, the Survey Procedures Sub-Committee, and the staff of the Division of Occupational Research and Development developed satisfactory survey instruments and procedures to service the data needs of both projects.

The key events flowchart on page outlines the survey activities in this area in relation to the overall project. The Feasibility Study Committee was informed of the survey development activities and approved the final survey instruments and procedures. Appendix A contains reproductions of the San Angelo survey instruments and related materials.

A corps of 55 interviewers was recruited and trained during the months of January and February. Interviewing took place in the city of San Angelo during February and March. Communications were maintained with the interviewers by a supervisory system, weekly program reports, and a newsletter. (Appendix A)

The city was organized into survey tracts corresponding to elementary school districts. Generally, two interviewers were assigned to each tract with additional interviewers assigned to the more populous tracts. Interviewers attempted to contact every household in their tract. One "call-back" was allowed for each household, providing a second attempt to complete an interview. The interviewer turned in the data sheets for completed interviews and contacts each week at one of two collection stations. Progress reports were also received from interviewers at this time. Two interviewer supervisors helped the interviewers with special problems and made new assignments and reassignments as needed.

The San Angelo survey of educational interests and needs ended on April 10, 1975. By this date approximately 30% of the San Angelo population had been contacted by the interviewers. This sample appeared to be representative of the total population of San Angelo (63,884) as indicated by comparisons of sex, age, and race variables.

County Surveys: Procedures for surveying persons living in the counties outside of the city of San Angelo had to be developed differently than procedures for the relatively densely populated areas of the city. The county areas comprised some 20,743 square miles with an estimated total population of 126,558 (excluding the 63,884 population of the city of San Angelo) and population densities ranging from one person per square mile (Edwards County) to 11 persons per square mile (Runnels County). Interview

surveying was judged impractical so questionnaire survey procedures were devised. The independent school districts in the various counties were the vehicles for disseminating and collecting the interest questionnaire in the counties. Region XV Education Service Center supported and coordinated these activities. All 19 counties in the area were oriented to the survey and invited to take part. Eleven counties participated in the survey.

Those participating school districts received sufficient copies of the questionnaire to provide each school child with a copy to take home to parents. Thus, it can be assumed that an extremely large proportion of the adult population of these counties was contacted. (See Appendix B to examine a reproduction of the survey questionnaire and related materials used in the county surveys.)

The county surveys were conducted in March and April, and at the end of the survey period 11 had reported some type of educational interest.

Employment Needs Survey. The purpose of this area of the survey was to determine the employment needs or occupational needs of the area, projected over the next several years. Initially, it had been anticipated that these data would be provided by area agencies regularly involved in manpower development and employment. It was later determined that these data were not available for the area from any source, so survey procedures had to be developed to secure this information directly from area business and industry. The Texas Employment Commission was, however, able to supply useful data of statewide, short-term employment needs.

Survey efforts in this area were greatly supported by the San Angelo Board of City Development and Chamber of Commerce. The BCD provided an address list of area manufacturers and included the employment needs

questionnaire in a mailing to area firms. The project staff developed an address list of government employees, businesses, and industries not represented on the BCD list. These organizations were contacted by direct mailing from the project office. A follow-up contact was made by the project office in early June, 1975. In total, some 235 employers were contacted. Of this number 110 participated in the survey by returning the questionnaire. (See Appendix C for reproductions of the occupational needs questionnaire and related material.)

Training and Educational Resources Survey. The continuing dialogue among the cooperating and interested regional educational institutions, which existed from the early planning and instrument development phases of the project, constituted an effective form of survey of the educational resources available. It was decided that no additional data collection would be undertaken in this area, but rather that the concerned educational institutions would react to the educational needs and occupational needs data by identifying the contributions each could make to service the educational needs.

Data Processing and Analysis

Both the interview data sheet used in the San Angelo survey and the questionnaire used in the counties survey were designed to be key punched (Appendices A and B). Computer programs were developed to organize the survey data and to produce the desired reports. The Computer Data Processing Center of the City of San Angelo and the San Angelo Independent School District provided the key punching and computer services. Because of the relatively small number of units surveyed, the response to the employment needs survey were tabulated by hand.

Traditional applications of descriptive statistics were used in the examination and analysis of the data. Where appropriate, graphic and tabular displays were used to help organize and summarize the findings. Chi square tests were used to test the representativeness of the sample.

Summary. A wide range of instrument development and survey procedures was used in acquiring the information needed in the study. In most cases the project staff became more directly involved in the initial data gathering procedures than had been planned. In each case, however, the involvement appeared desirable to secure more complete information than would have otherwise been forthcoming.

CHAPTER III

SUMMARY OF THE FINDINGS

Introduction

The findings of the study are organized into three divisions: (1) educational needs and interests, (2) occupational (employment) needs, and (3) educational resources. Each report division corresponds with a major area of investigation and contains a summary of the primary findings in that survey area. Some additional details of the findings have been organized in the Appendices and will be referenced when appropriate.

Educational Needs and Interests

Survey Sample. Although the survey plans were to attempt to reach the total population of adults (persons 16 years of age or older) in the Concho Valley area, it was understood from the beginning that only a proportion of this total would be reached. It was also anticipated that there would be survey procedure differences and, therefore, participation differences between the San Angelo survey and the counties survey.

Understandably, the suitability of the sample actually surveyed in terms of adequate size and representativeness was essential to allow the generalization of the sample findings to the total population. The San Angelo survey provided the best setting in which to examine the survey sample in relation to the population. In the San Angelo survey an interview contact was made at 6,229 residences representing an estimated 30% (from projected 1970 U.S. Census data) of the residences in the city. Survey data were collected on 19,105 persons representing approximately

30% (29.9%) of the 63,884 city population. Comparisons of the sample proportions with known population proportions on variables such as age, ethnic background, sex, and other characteristics strongly support the assumption that the survey sample is representative of the larger population. Projections of the sample findings developed in this report are based on this assumption.

It was not possible to examine the appropriateness of the survey sample in the counties survey with much assurance. Several factors contributed to the difficulty. First, because only 11 of the 18 counties participated, only selected clusters were surveyed. The 11 counties that did participate appear to represent more closely the rural population of the area than the urban-suburban populations of area cities such as Brownwood and Del Rio. Second, the exact proportion of the populations in the counties surveyed that had an opportunity to respond is not known. However, it does seem reasonable to assume, based upon the method of distribution of the questionnaire, that a very large proportion of the adult population (estimated above 80%) did have an opportunity to participate. Third, probably older adults over fifty years old are not proportionally represented in the sample because of the method of distribution of the survey questionnaire since the questionnaire was taken home by the school children.

In summary, the San Angelo survey sample appears to be representative of the San Angelo population and lends itself to appropriate generalization. The survey sample of the counties is likely to contain a number of distortions that limit the generalization that can be made from the sample findings. Considerable caution should be used when generalizing the counties survey findings. It is interesting to note that in both surveys approximately 30%

of each respective total population was contacted.

Findings: San Angelo Survey. Approximately 20% of persons interviewed, 2,520 of an estimated 12,485, 16 years of age or older, indicated an interest in some type of additional adult education. Projecting the sample statistic to the entire population of San Angelo, 63,884, an estimated 8,428 adults could be expected to identify some area of adult educational interest. Table 1 details the sex, ethnic background, and age distribution of adults interested in additional education.

TABLE 1

SELECTED CHARACTERISTICS OF SAMPLED ADULTS
INTERESTED IN ADDITIONAL EDUCATION
(San Angelo Survey)

Sex	Percent Of Sample	Ethnic Background	Percent Of Sample	Age	Percent Of Sample
Male	38.6	Black	5.5	16-25	34.5
Female	61.4	Mexican American	16.9	26-30	14.0
		Indian	0.1	31-40	25.3
		Oriental	-	41-50	15.2
		Anglo	72.4	51-60	7.3
		No Designation	5.2	61-Up	3.8

Of the adults interviewed (persons 16 years of age or older), 17% (2,151) identified some area of post-secondary education interest. Projecting this sample statistic to the San Angelo population would produce an estimate of 7,194 adults in the population that could be expected to indicate an interest in additional post-secondary education or training.

Of the 483 persons interviewed, approximately 4% of the adults sampled identified a vocational-technical education or training interest. The proportion suggests that there should be 1,615 adults in the population who would have identified an interest in the vocational-technical education or training area.

More adults surveyed indicated an interest in some type of college credit program than in any other single area of educational interest. The 984 persons indicating such an interest comprised about 8% of the adults contacted. Projected to the population, we could expect 3,291 persons to have indicated an interest in the area. It should be pointed out that this major category of educational interest included a very wide range of college credit programs and was not limited to the more traditional four-year degree programs.

The second most frequently identified area of educational interest was informal adult and continuing education. Roughly 6% of the adult sample, 684 persons, indicated such interest. This would project to approximately 2,288 adults in the San Angelo population. Again, this major category is inclusive of an extremely wide range of types of courses and content areas. Table 2 summarizes the sample findings and projections for the four major categories of education interest.

Tables 3-6 display the subcategory sample statistics and projections for each of the major categories of educational interest. Additional detail of the specific educational interests indicated by the adults interviewed is found in Appendix A under the title "Subcategory of Educational Interest."

TABLE 2

SUMMARY OF EDUCATIONAL INTEREST BY MAJOR CATEGORIES
(San Angelo Survey)

Major Categories of Interest	Number of Adults Indicating Interest	% of All Adults Sampled (N=12,485)	% of Total Interest (N=2,520)	Population Proportion
Basic Education	283	2.3	11.2	947
Post-secondary Vocational-Technical Education	483	3.9	19.2	1,615
Pre-college and College Credit Education	984	7.9	39.0	3,291
Informal Adult and Continuing Education	684	5.5	27.1	2,288

[1]This subcategory was used when the respondent indicated an interest in a one-year or two-year certificate program but did not identify a more specific subcategory of interest.

TABLE 6

INFORMAL ADULT AND CONTINUING EDUCATION:
SUBCATEGORIES OF INTEREST
(San Angelo Survey)

Category Code	Subcategory of Educational Interest	Adults Indicating Interest	% of All Adults Sampled (N=12,483)	% of Total Interest (N=2,520)	Population Proportion
7.0	Courses in Vocational Interest Area	73	.6	2.8	244
7.1	Courses in Avocational, Recreational, or Hobby Area	592	4.7	23.5	1,980
7.2	College Credit by Independent Study and Credit-by-Examination	19	.2	.8	64

Approximately 87% of the interest expressed for informal adult and continuing education was classified as related to the avocational, recreational, or hobby area subcategory (see Table 6). The detailing of this subcategory in Appendix A indicates that the topics most frequently named by adults were art, crafts, gardening, interior decorating, painting, sewing, typing, and woodwork. An examination of this detailing of adult interest clearly reveals the tremendous scope and variety of educational interest expressed by adults of the area.

Selected basic descriptive information was collected in ten areas by the interviewers from each of the 2,520 persons interested in additional education. A summary of the results of this interviewing follows below and the detailed report is located in Appendix A.

1. STARTING ESTIMATE

   Of persons interested in continuing their education (N=2,520), 76% indicated they could begin a program within 6 months to 2 years, whereas, about 24% were uncertain as to the date they could begin or did not respond.

2. EDUCATIONAL BACKGROUND

   Approximately 73% of the persons interviewed had completed high school, while 23% reported attaining less than a high school diploma or G.E.D. About 27% had between one and three years of college experience, 14.1% had completed a four-year degree, and 5.2% had completed one or more years of graduate level work. Approximately 4% did not respond.

3. CURRENT EDUCATIONAL ACTIVITY

   Of those interviewed, about 81% were not enrolled in any type of additional training or educational program, 2% were currently actively enrolled in some type of vocational-technical program, and 6% were enrolled in a two- to four-year college program. Roughly 11% did not respond.

4. EMPLOYMENT STATUS

   About 50% of those interviewed were employed full-time. Unemployment totals were approximately 27% (this figure most certainly includes many housewives), and 9.2% were employed part-time. About 14% did

not answer this question.

5. EMPLOYMENT BACKGROUND

Classifications among interview subjects were as follows: 5% laborers, 21% semi-skilled and skilled, 31% technical and professional and 12% none (25% were classified as "other"). Approximately 6% did not respond.

6. FINANCIAL PROBLEMS

Of the persons surveyed, 74% would have no problems with books, tuition, or transportation costs, while 18% felt that these costs would present a major problem. Roughly 8% did not respond.

7. FINANCIAL ASSISTANCE

Approximately 80% are not currently eligible for financial assistance through military service, veterans benefits, vocational-rehabilitation or company assistance programs, whereas, 20% indicated that they were eligible for financial assistance from one of the above sources.

8. TRANSPORTATION

Transportation was viewed as no problem by 92% of the San Angeloans interviewed. Problems in transportation were indicated by 8% of interviewees, however.

9. CLASS TIME

Weekday classes after 6:00 p.m. were popular with 48% of those interviewed. Of the persons interviewed, 24% would prefer morning classes during the week. About 28% were uncertain as to the times they could attend classes or did not respond.

10. ESTIMATE OF FAMILY INCOME LEVEL

About 75% of the persons interviewed were estimated as having

incomes above the poverty level of $4,500 annually, while approximately 11% were identified with incomes below this figure. (In about 14% of the cases the interviewer could not make an estimate.)

Findings: Counties Survey. Because the survey instrument and procedures were of necessity different in the counties, and because the exact number of persons who had an opportunity to respond to the questionnaire is unknown, a separate reporting of the counties results was judged appropriate. The qualities of the data from the counties restrict greatly the inferences that can be drawn with reasonable safety about the full population of adults in the counties.

The procedures and sampling method of the counties survey are discussed in some detail in Chapter II. Summarizing from this discussion, 11 of the 18 counties included in the Concho Valley area participated. Approximately 1,200 returning the questionnaire indicated an interest in some type of additional education. Considering the total population in the "cluster" of counties actually participating in the survey in proportion to the total population of 18 counties of interest, it would appear roughly 30% of this total population had been contacted by the survey. In this respect the sample was similar to that of the city survey, but, as suggested earlier, this 30% does not represent what can be assumed to be a balanced sample. Appendix B contains details of county population data.

Eden in Concho County had recently conducted its own survey of educational interest and did not participate in the project survey. The report of the Eden survey is included in Appendix B. These findings were not included in the project survey statistics reported below.

In reporting these data no attempt has been made here to estimate the population proportions. Table 7 details the sex and age distribution of adults in the counties participating in the survey. Ethnic background information was not collected. Table 8 summarizes the educational interest of the 1,201 respondents by major categories of educational interest.

TABLE 7

SELECTED CHARACTERISTICS OF SAMPLED ADULTS
INTERESTED IN ADDITIONAL EDUCATION
(County Survey)

Sex	Percent of Sample	Age	Percent of Sample
Male	36.3	16-25	16.6
Female	63.7	26-30	20.3
		31-40	44.4
		41-50	16.1
		51-60	2.3
		61-Up	.3

TABLE 8

SUMMARY OF EDUCATIONAL INTEREST BY MAJOR CATEGORIES
(County Survey)

Major Categories of Interest	Number of Adults Indicating Interest	% of Total Interest (N=1,201)
Basic Education	193	16.2
Post-secondary Vocational-Technical Education	358	29.8
Pre-college and College Credit Education	450	37.5
Informal Adult and Continuing Education	198	16.5

Although these proportions closely parallel those of the city survey, considerably larger percentages of interest were reported in the areas of adult basic education and vocational-technical education and training. Much less interest (16.5% of the total) was expressed in informal adult and continuing education. Interest in college credit programs was about the same as that reported in the San Angelo survey. Tables 9 through 12 display the subcategory sample statistics for each of the four major categories of interest.

Occupational (employment) Needs

Survey Sample. A master list of 235 area businesses and industries including government agencies was developed as a representative sample of employers within the region. It is not known what proportion of all employers in the area this sample represents, but available data suggest the sample represents a substantial proportion of area firms employing seven or more persons. Part of the initial questionnaire survey was mailed by the project office and part by the San Angelo Board of City Development and the Chamber of Commerce. (See Appendix C for reproductions of the questionnaire and cover letter.) A follow-up inquiry by the project office was made to all firms not having responded. Table 13 summarizes the results of the mailings. Counting a few returns received some time after the close of the survey, approximately 50% of the businesses contacted responded and 86% of these indicated that some additional employees might be needed.

TABLE 13

OCCUPATIONAL NEEDS SURVEY:
REPORT OF RETURNS

	ASU	BCD	TOTAL
Questionnaires Mailed	123	112	235
Questionnaires Received	72	38	110
Percent Received	58.5%	33.9%	45.8%
Received from 1st Request	52	12	64 (58.2%)
Received from 2nd Request	20	26	46 (41.8%)

Findings: Occupational Needs Survey. The responding employers made both "conservative" and "optimistic" estimates of their additional employment needs over the next 18 to 24 months. The "optimistic" estimate, 1,902, was 70% larger than the "conservative" estimate, 1,124. A summary of these occupational needs by the five major categories of occupations is found in Table 14.

TABLE 14

SUMMARY OF OCCUPATIONAL NEEDS BY
MAJOR CATEGORIES OF OCCUPATIONS

Occupational Categories	Conservative	(%)	Optimistic	(%)
I. Professional, Technical, and Managerial	73	6.5	137	7.2
II. Clerical and Sales	319	28.4	519	27.3

A summary of the occupational shortages within the San Angelo area as identified by the Texas Department of Community Affairs, Manpower Services Division, is included in Appendix C supplemented by the survey report of the regional office of the Texas Employment Commission.

The survey findings reported here represent the most complete and current information available at the time of this report on the occupational needs of the area. The data should prove useful in identifying trends and some specific areas of shortage to be subsequently examined more systematically. As would be expected, estimates of employment needs are quite sensitive to both current economic conditions and the employers' expectations of future conditions.

Educational Resources

As was indicated earlier in the report, it was decided that no extensive surveying of educational resources would be necessary, but rather that area educational institutions should be given the opportunity to study the findings of educational and employment needs surveys, and from this perspective identify the resources available to meet these needs.

CHAPTER IV

SUMMARY AND CONCLUSIONS

Introduction

It is very important to clearly understand what has been measured in attempting to interpret the findings of this study. The survey attempted to measure the educational interest of adults in the region beyond their current educational attainment or involvement. In addition, the educational interest reported here represents those interests that the adults interviewed said they would want to satisfy by enrolling in programs offered within the area, if such programs were available. The figures reported here do not represent the number of adults whose educational needs cannot be satisfied by the educational offerings currently available in the area. These figures represent a measure of total adult educational interest. Lastly, expressions of interest should not be interpreted as assurances of enrollment. Enrollment figures are commonly in the range of 25% to 40% of interest figures.

Summary and Interpretation of Major Findings

Overview of Major Findings. The research clearly demonstrates beyond reasonable doubt that in San Angelo and the surrounding counties of the Concho Valley Area there are substantial numbers of adults (persons 16 years of age and older) interested in pursuing some type of additional education. The data developed by this study suggest that in San Angelo approximately one adult in five currently has such an interest. The extent of educational interest existing in the counties is more difficult to estimate from the research just completed, but the sample findings appear

to support rough estimates in the vicinity of one in every ten to fifteen adults in the population. This would mean that in San Angelo alone there are eight to nine thousand adults with such educational interest, and, furthermore, one could expect another eight to ten thousand such adults in the counties. Even if one were to assume that only 40% of these adults would ever translate their expression of interest into action, the figures are impressive.

The findings of this study suggest that a larger number of females than males in the adult population are interested in additional education. These differences were found in both the San Angelo and counties surveys and were also noted in each of the major categories of educational interest with the exception of the vocational-technical training and education category. Many of the sub-divisions of this area are apparently still viewed as primarily or exclusively masculine.

The important generalization seen here is that a majority of the interest, approximately 61%, in additional education was expressed by women. This trend may be in part accounted for by the changing role of women in the United States and by current economic conditions which might tend to encourage women to seek additional education for vocational, avocational, or recreational reasons.

Certainly, as one would expect, a large proportion of these adults are in the immediate post-secondary years, ages 16-25. Roughly 30% of the interest expressed is accounted for by this age group. But this means that roughly 70% of the interest expressed came from adults 26 years old and older. Adults in the age category 31 to 40 years accounted for over 25% of the interest expressed, with adults 41 to 50 years accounting for another

15%. It appears certain that a substantial portion of the adults in the Concho Valley Area no longer view education as a pursuit of the very young. These findings and projections suggest that adult education in this region will involve adults of all ages.

An interesting finding of the study is that in terms of the overall interest expressed, ethnic groups are represented in proportion to their numbers in the total population. However, as we examine the individual categories of educational interest this proportional relationship collapses. The ethnic minorities are represented far beyond their proportion in the population in the adult basic education area and, to a somewhat lesser degree, in the vocational-technical area. Furthermore, they are under-represented in the informal adult and continuing education area and, to a lesser degree, in the college credit program area.

Post-Secondary Education Interest

Although roughly 13% of the interest expressed was in the category of adult basic education, approximately 87% of the interest was in some type of post-secondary education, including vocational-technical education (24%), college credit programs (39%), and informal adult and continuing education (24%). There should be about 7,000 adults with post-secondary educational interest in San Angelo and possibly an additional 7,000 in the counties. Again, ultraconservative interpretations of estimates of this magnitude support optimism with regard to the continuation, expansion, and development of a number of programs in those areas.

Vocational-Technical Education and Training. The vocational-technical education and training category was the third most frequently identified area of interest in the San Angelo survey and the second in the counties

survey. Approximately 24% of the total educational interest indicated was in this category: 19% in San Angelo survey and 30% in the counties survey. The data suggest that there should be about 1,700 persons in San Angelo interested in this area of education and at least that number in the counties. Of the specific subcategories within this area, automotive technology, electrical/electronic technology, allied health services, and drafting and design technology generated the greatest interest. Because there are so many possibilities within this broad area, the general subcategory "other" was by far the most frequently selected. (See Appendix A for specific interests classified into this category.)

Additional study of the survey findings and further follow-up appears needed in this category. For example, it seems likely that the allied health services subcategory would have program similarities with the nursing subcategory. In some interest areas the suggested follow-up would need to assess more precisely the educational preparations of those persons interested. Also, there is the need to determine if the interest expressed is directed toward vocational, avocational, or recreational applications.

The interest recorded in short courses or workshops needs to be explored and may be served in part by an adult and continuing education program. Some of the other subcategory areas, especially where the interest is more avocational in nature, may also be served by such a program.

College Credit Programs. The college credit and college credit programs category was by far the most frequently identified. Approximately 39% of the interest expressed was associated with this category. The findings suggest that there should be in excess of 3,500 adults in the San Angelo population interested in some kind of college credit, and perhaps in excess

of 5,000 additional adults in the counties. Although much of this interest, about 37%, is in the more traditional four-year college program, the adults surveyed expressed interest in some areas of the one- and two-year certificate programs. The medical receptionist one-year certificate program was especially popular with adults living in the counties.

Interest in the two-year certificate programs was predominately in nursing followed by secretarial science with its specializations, legal secretary and medical secretary, and then by data processing. Opportunities for continued program expansion and development appear to exist in these areas.

The adults surveyed expressed substantial interest in taking "selected college courses in interest areas." Much of this interest may be served by offerings of the traditional college program. This includes a large number of adults who expressed interest in graduate school study.

Informal Adult and Continuing Education. Second only to college credit programs in adult popularity, this category was identified by 27% of the San Angelo sample and by 17% of the counties sample. Approximately 2,300 adults in San Angelo and roughly as many in the counties can be expected to currently hold an interest in additional education in this area. Of the interest expressed in this category 86% was associated with interest in courses in avocational, recreational, or hobby areas, while less than 10% was identified with courses in vocational interest areas. Nonetheless, the study findings in some of the other interest areas suggest that the adult and continuing education program may offer the most appropriate vehicle for courses of this nature.

Occupational Needs

The findings of the occupational needs survey suggest that there is substantial need in the area for nurses, managers, typists, clerks, bookkeepers, salesmen, and secretaries. Moderate employment need is indicated in numerous other areas. It is interesting to note that relatively high adult educational interest was expressed in most of the areas of highest occupational need.

Conclusions

The major conclusions of the study reported here are organized in order of their general importance to the purposes of the study.

1. The findings and the interpretation of these findings by the primary parties involved does not demonstrate the necessity at this time for the cooperative development of associate degree programs by the San Angelo Independent School District and Angelo State University. The present adult interest can best be served by less formal coordination and selective expansion of offerings in the post-secondary vocational-technical education area. It is the consensus of the Feasibility Study Committee that the magnitude and direction of adult participation and need for such programs be monitored to determine if a cooperative associate degree program will be needed in the future.
2. The survey findings do not support the need for the development of a separate two-year junior college program within the area. The selective development of a few college credit courses by Angelo State University and the selective expansion

of offerings by the University's Division of Adult and Continuing Education should meet several of the needs expressed for areas of vocational-technical education. Expansion of some of the post-secondary vocational-technical programs currently offered by the San Angelo Independent School District should service much of the need expressed in this area. As was planned, this research has developed the resources for examination of the adult interest and occupational need for vocational-technical programs in the area. These resources include (1) a complete data file, (2) specialized name and address listings, and (3) computer-printed address labels.

3. The popularity and interest in informal adult and continuing education is beyond question. Although most of the expressed interest in this category was associated with avocational and recreational applications, its potential for developing other adult education courses and programs is firmly established by the research.
4. The need for the continued development of the Angelo State University program in nursing is dramatically supported by the findings of both the adult education interest survey and the area occupational needs survey. The findings appear to support the very intensive and active development and expansion of this general area and its related specializations.
5. The findings of the study support the need for the continuation of the licensed vocational nursing program sponsored by the San Angelo Independent School District.
6. An examination of the interest survey findings indicates that

there is moderate interest in secretarial science and several of its specializations, such as legal secretary, medical secretary, medical receptionist, etc. A logical conclusion is that perhaps a core curriculum in secretarial science with additional specialization courses could effectively and efficiently serve all of these needs for specialization within the broad field of secretarial science. Selected courses from the nursing and business programs could provide support for this area. Another important finding in considering the program needs in this area is that the regional occupational needs survey, as well as Texas employment needs data, clearly supports the development of this area.

7. Survey findings of adult interest in graduate study identify a continuing healthy interest in graduate programs.
8. A relatively large proportion of adults expressed an interest in taking selected college courses in their areas of interest. This finding suggests that a closer examination of this expressed interest may be appropriate.

EDUCATIONAL NEEDS AND INTEREST SURVEY: SAN ANGELO SURVEY

Items Included:

- Survey Interviewers' Training Session Agenda
- Interviewers' Guide
- Interview Schedule
- Subcategory of Educational Interest Sheet
- A.B.E. Interest Survey Data Sheet
- Interview and Record Keeping Procedures
- A.B.E. Needs Assessment Time Sheet
- Interviewers' Newsletter (Sample)
- Interviewers' Meeting Questionnaire: A Progress Report
- Interviewers' Identification and Information Card
- San Angelo 1970 Census of Population Figures
- Detail Report of Educational Interest as Recorded in Written Comments of the Interviewers
- Detail Report of Responses to Interview Questions 5-14

SURVEY INTERVIEWERS' TRAINING SESSION
February 10, 11

AGENDA

MONDAY, FEBRUARY 10
(4:15 - 5:45)

- REGISTRATION (Annabelle Jones - Geraldine VanEvery)
- INTRODUCTION (Horace Bargley - Noland Harvey)
- EMPLOYMENT AND PAYROLL (Horace Bargley)
- TRACT ASSIGNMENT AND INTERVIEW TEAM ASSIGNMENTS (Horace Bargley)
- TEAM PLANNING (Horace Bargley - Noland Harvey)
- INTERVIEW PROCEDURES ORIENTATION (Noland Harvey)

TUESDAY, FEBRUARY 11
(4:15 - 6:30)

- INTERVIEWER TRAINING (Noland Harvey)
- INTERVIEW DEMONSTRATION AND PRACTICE (Annabelle Jones - Geraldine VanEvery)
- TIME SHEET (Horace Bargley)
- COLLECTION AND DISTRIBUTION PROCEDURES (Horace Bargley - Noland Harvey)
- GENERAL QUESTIONS (Horace Bargley - Noland Harvey)
- INTERVIEW MATERIAL DISTRIBUTION (Annabelle Jones - Geraldine VanEvery)

INTERVIEWER'S GUIDE

As an Interviewer for this project, you are a representative of the school district. Respondents' impression of you will have a bearing on the co-operation you receive and their impression of the school district and program that you represent. In all of your contacts, be courteous and avoid overly aggressive actions.

There is no obligation on the part of area residents to answer any questions. If a resident refuses to respond to any or all questions, this is his right, respect it.

General Instructions

1. Ask only one question at a time.
2. Repeat question if necessary.
3. Make sure the subject understands the question.
4. Listen carefully to subject's answer.
5. Allow the subject sufficient time to answer the question; but do not let interview drag.
6. Avoid suggesting answers to questions. (Guide but don't push)
7. Do not show signs of surprise, shock, anger, or other emotions if unexpected responses are given.
8. Maintain a neutral attitude with respect to controversial issues during the interview.
9. Use tact and skill in getting the subject back to our area of inquiry when he has strayed too far from the original question.

Introduction

The following is information you may want to convey to the respondent at the beginning of the interview to gain his or her cooperation and confidence. It is not necessary that the introduction be given verbatim. The best approach is for you to develop your own personal "get-in-door" introduction.

- This survey is sponsored by the San Angelo Independent School District.
- The school district is being assisted in this effort by Angelo State University, the Concho Valley Council of Governments, and the Region 15 Educational Service Center.

- The purpose of the survey is to find out what the educational and vocational needs of adults are in our region so that programs can be developed to meet these needs.

- The purpose of this interview is to find out what the educational interests and needs are for persons in this household.

Specific Instructions for Survey Questions

The interview form is divided into three parts: the Heading, Part I and Part II. The Heading and Part I should be completed for all respondents. Part II will be completed only if a positive response is given to any section of Part I, Item 2.

Heading:

1. Index No., Leave blank

2. County-District No., Tract, Interviewer, City, ZIP Code and Area Code should be completed before going out to begin interviews. Information for these items will be provided each interviewer.

3. Address - Leave a space between each word in the street name and the house number.

4. Telephone Number - Enter telephone number.

5. Ethnic Group - In most instances the ethnic group, of which a respondent is a member, can be determined by observation. In this space enter one of the following code numbers:

   1 _____ Black

   2 _____ Mexican American

   3 _____ Indian

   4 _____ Oriental

   5 _____ Anglo

   6 _____ Other

Part I - General

Items 1.0 - Enter the total number of persons living in the household

1.1 - Enter the number of persons under 18 years of age

1.2 - Enter the number of children who are 3 years old on or before 1 September, 1975 and have some type of handicap (physical or mental)

1.3 - Enter the number of children 4 years old on or before 1 September, 1975 and have some type of handicap

1.4 - Enter the number of children 5 years old on or before 1 September, 1975

1.5 - Enter the number of children 6 years old on or before 1 September, 1975 who are not attending a public kindergarten

1.6 - Enter the number of persons over 16 years of age, no longer attending school, and haven't completed high school

1.7 - Enter the number of persons age 18 to 65 years of age

1.8 - Enter the number of persons over 65 years of age

Item 2 - In completing each part of Item 2, enter the number of persons interested in each educational area (2.0, 2.1, 2.2) in the box to the far right. If no persons are interested in an educational area record a "0" in the appropriate box on the far right.

If there are any positive answers to any part of Item 2, complete Part II of the survey form for each individual identified as having an educational interest. If all responses to Item 2 are negative ("0's" recorded in the three boxes), then the interview is completed and should be terminated.

Part II - Educational Employment Data

Part II should be completed on all members of the household who have indicated an interest in additional education or training.

Use the interview schedule to guide you in completing this part of the interview sheet.

The name should be entered in the left hand column; enter the last name first.

Items 1. Enter the sex of each respondent using the number "1" for males and the number "2" for females

2. Enter age (right justify age entries)

3. There are three major categories of interest. These categories are numbered 1 through 3. Enter one of these numbers in column 3 as the code for category of interest.

4. Subcategory. The subcategories are listed on page 2. Each interviewer will be provided with an additional listing of these categories that are to be used by the respondent as an aid to determine a specific area of interest. Each category is preceded by a code number. Enter the code number for the category selected by respondent in column four.

If the respondent indicates an educational interest classified in categories 2.9, 3.9, 4.3, or 5.9 an additional explanatory note should be entered on the line at the bottom of the survey form headed "Detail for Item 4". This should be done by: (1) recording the number to the left of the subjects name on the data sheet, (2) recording the number of the subcategory the subject has identified (example: 2.9) and, (3) recording a brief explanatory note pinpointing the subject's educational interest. An example of the recording procedure would be: 1 - 2.9 Commercial Photography.

Necessary additional notes detailing any of the other subcategories in this section may be recorded using a similar procedure. For example: 2 - 2.3 Small Business Management. This detailing is very important to the success of the survey because you, as an interviewer, will capture information that would otherwise be lost.

5. The possible answers to Item 5 are coded 0 through 5. Enter the code number, for the answer given, on column 5. If the answer to this question is NO, record a "0" and <u>do not go on to additional questions for this person</u>.

6 through 13. Items 6 through 13 are self explanatory. The possible answers are preceded by a code number. Enter one of these code numbers in the applicable column.

14. Item 14 is a personal question. Some respondents may resent your asking the question. If you can estimate the income, then do not ask the question. <u>Use your judgment for making an estimate</u>.

Each interviewer will be provided with survey information cards. One of these cards should be left at each household. You will also be provided with brochures describing the Continuing Education Program at ASU. One of these should be left at each household.

INTERVIEW SCHEDULE

1. Sex (Male-1, Female-2)

2. Age

3. Major category of interest:

   1. Continuing formal education
   2. Vocational or technical training or re-training
   3. Informal non-credit courses

4. Sub-category of interest -- See Page 2 ▷ ▷ ▷

5. Assuming a good program was offered in this region in _____'s area of interest, would _____ consider enrolling in such a program? (If NO, record a "0" and do not go on to additional questions for this person. If YES, determine when the person would most likely be able to start)

   0. No --Not interested in program offered in this region.
   1. Yes --Immediately
   2. Yes --Within 6 months
   3. Yes --Within 1 year
   4. Yes --Within 2 years
   5. Yes --Not certain about starting time

6. How much formal education has _____ _____ completed?

   1. Completed less than high school or GED
   2. Completed high school or GED
   3. Completed one, two, or three years of college
   4. Completed two year Associate Degree Program
   5. Completed four year college degree program
   6. Completed one or more years of Graduate level work

7. Is _____ presently enrolled in any type of education or training program?

   0. No -- Not enrolled
   1. Adult Basic Education Program
   2. Regular high school program
   3. Vocational-Technical Program (beyond high school)
   4. Vocational-Rehabilitation Program
   5. Two or four year college program
   6. Graduate Program
   7. Other

4. SUBCATEGORY OF EDUCATIONAL INTEREST

BASIC EDUCATION

(1.1) Adult Basic Education (basic skills through 8th grade)

(1.2) Completing credits for high school graduation

(1.3) Achieving G.E.D.

(1.4) English as a second language

VOCATIONAL - TECHNICAL TRAINING

(2.0) Vocational - technical skill

(2.1) Automotive technology
(2.2) Agriculture technology
(2.3) Retail and Marketing
(2.4) Electrical/Electronic technology
(2.5) Law enforcement technology
(2.6) Allied health services
(2.7) Industrial technology
(2.8) Drafting and Design technology
(2.9) Other _____ (Identify other interest)

(3.0) Short courses or workshops in a vocational interest area
(Use sub. cat. 1-9 from 2: Example: 3.3)

COLLEGE CREDIT PROGRAMS

(4.0) Pre-college remedial work (preparation for college)

(4.1) College one-year certificate program

(4.2) Medical receptionist certificate program
(4.3) Other _____ (Identify other interest)

(5.0) College two-year certificate program in fields such as ...

(5.1) Data Processing
(5.2) Secretarial science
(5.3) Legal secretary
(5.4) Medical secretary
(5.5) Nursing
(5.6) Radiology
(5.7) Commercial Art
(5.8) Electronics
(5.9) Other _____
(Identify other interest)

(6.0) College four-year program
(6.1) Selected college courses in interest areas
(6.2) Graduate study

INFORMAL ADULT AND CONTINUING EDUCATION

(7.0) Adult continuing education courses in new vocational interest area
(7.1) Adult continuing education in avocational, recreational, or hobby area
(7.2) College credit by independent study and credit-by-examination

8. Employment Status:

   1. Full-time employment
   2. Part-time employment
   3. Full-time student
   4. Seasonal employment
   5. Retired
   6. Unemployed

9. Employment background:

   1. Laborer
   2. Semi-skilled
   3. Skilled
   4. Technical
   5. Professional
   6. Other
   7. None

10. Would the cost of books, tuition, transportation be a major problem?

    0. No
    1. Yes
    2. Don't know

11. Would_____be eligible to receive financial assistance for additional education because of:

    0. No
    1. Current military service
    2. Veteran benefits
    3. Handicap (vocational-rehabilitation)
    4. Company educational assistance program
    5. Other

12. Would transportation be a major problem in getting to the classes?

    0. No
    1. Yes
    2. Not sure

13. When would be the most convenient time for _____ to attend classes?

    0. Not sure or no opinion
    1. Weekday mornings
    2. Weekday afternoons
    3. Late afternoon after 4:00 p.m.
    4. Saturday
    5. Evenings after 6:00 p.m.

14. Estimate of present income:

    0. Could not make estimate
    1. Below $4,500
    2. Above $4,500

SUBCATEGORY OF EDUCATIONAL INTEREST

BASIC EDUCATION

(1.1) Adult Basic Education (basic skills through 8th grade)

(1.2) Completing credits for high school graduation

(1.3) Achieving G.E.D.

(1.4) English as a second language

POST-SECONDARY AND ADULT EDUCATION PROGRAMS (ALL PROGRAMS MAY INVOLVE COLLEGE CREDIT)

(2.0) Vocational - technical education

(2.1) Automotive technology
(2.2) Agriculture technology
(2.3) Retail and Marketing
(2.4) Electrical/Electronic technology
(2.5) Law enforcement technology
(2.6) Allied health services
(2.7) Industrial technology
(2.8) Drafting and Design technology
(2.9) Other _____ (Identify other interest)

(3.0) Short courses or workshops in a vocational interest area

(4.0) Pre-college remedial work (preparation for college)

(4.1) College one-year certificate program

(4.2) Medical receptionist certificate program
(4.3) Other _____ (Identify other interest)

(5.0) College two-year certificate program in fields such as ...

(5.1) Data Processing
(5.2) Secretarial Science
(5.3) Legal Secretary
(5.4) Medical Secretary
(5.5) Nursing
(5.6) Radiology
(5.7) Commercial Art
(5.8) Electronics
(5.9) Other _____ (Identify other interest)

(6.0) College four-year program
(6.1) Selected college courses in interest areas
(6.2) Graduate study

INFORMAL ADULT AND CONTINUING EDUCATION

(7.0) Adult continuing education courses in new vocational interest area
(7.1) Adult continuing education in avocational, recreational, or hobby area
(7.2) College credit by independent study and credit-by-examination

INTERVIEW AND RECORD KEEPING PROCEDURES

1. RECORD OF CONTACTS

The interviewer is to start an ABE Interests Survey Data Sheet for each and every household contacted. This is to be done even when the contact does not result in a completed interview. The interviewer is to complete the following Data Sheet items: county-district number, tract number, interviewer number, address, city, ZIP code, and area code. (Of course these items can be completed without interviewing)

2. SECOND TRY

The interviewer is to make a second contact when necessary in an attempt to complete an interview. This second attempt should be indicated on the original Interests Survey Data Sheet by recording a "2" in the upper right hand corner of the front side of the Data Sheet. If the interview is not completed on this second try, the Data Sheet should be turned-in with the other Data Sheets of completed interviews at the end of each reporting period.

3. REFUSALS

Should a contact at a household refuse an interview the preliminary part of the Interests Survey Data Sheet should be completed as described above and the interviewer should write the word "refused" in the upper right hand corner of the front page of the Data Sheet. These refusals should be submitted at the next regular reporting time.

4. INTERVIEWER TIME SHEET AND RECORDS

Each week, at the end of the reporting period (Thursdays), the interviewer should turn in a fully completed Time Sheet for the work period and all Interests Survey Data Sheets including those fully completed, those refused, and those where a second try has been attempted.

It is very important that these Time Sheets and Data Sheets be turned in promptly when due.

5. CONTACT-DISTRIBUTION POINTS

There will be two (2) contact and distribution points at which interviewers are to turn in materials and receive additional interview materials. These contact points will be Room 312 at the San Angelo Independent School District's Administrative Offices, 100 North Magdalen, and the Adult and Continuing Education Office, Room 110 at the University Center, Angelo State University. The ASU Office will be open from 8:00 a.m. to 8:00 p.m., Monday through Thursday and until 5:00 p.m. on Friday.

INTERVIEWERS' NEWSLETTER

ADULT BASIC EDUCATION SURVEY PROJECT
VOCATIONAL-TECHNICAL FEASIBILITY STUDY

No. 4 March 13, 1975

SAN ANGELO SURVEY EXTENDS TO APRIL 10 - It was announced Tuesday at the special interviewers' meeting that the San Angelo Survey will continue to April 10. The interviewers present at the meeting responded favorably to this announcement. Many had called in suggestions and requests to extend the deadline for the Survey. We feel that our interviewing is now reaching its maximum effectiveness and efficiency and that the time extension will allow us to greatly improve both our coverage and the quality of results. This extension will make it necessary that two checks be issued to interviewers working through the entire run of the Survey. The hours for the first check have already been turned in to T.E.A.

SOME INTERVIEWERS ARE COMING BACK FOR MORE - Some of you will soon be completing all interviewing in your originally assigned district. Several persons have already indicated that they would like to continue interviewing in other survey districts. This is great news for the Project. It means that those of you who need some extra help in your district can get it and that we will have highly experienced interviewers to provide that help.

If you are interested in continuing your work after your district has been completed, please notify Mr. Bargely, Dr. Harvey or Ms. Annabelle Jones (655-5741 and 942-2164)

SURVEY GOES TO THE REGION - Our Adult Education Survey will soon be going out to the entire Concho Valley Region. Included in this region are approximately 18 counties surrounding San Angelo. The survey in these counties will be handled by questionnaire rather than interview. The questionnaire will be distributed to each household by as many as 40 different school districts participating in the survey. It is interesting to note that the geographic area our Adult Education Survey includes is greater than many states.

VOCATIONAL-TECHNICAL EDUCATION - Of all the educational interests on the list the Vocational-Technical Interests seem to be the ones that are the least known and understood by the public. Yet for many people these programs represent the best opportunity for them to improve their level of living. Please take the extra time when necessary to help people explore the possibilities in these program areas.

INTERVIEWERS' NEWSLETTER

ADULT BASIC EDUCATION SURVEY PROJECT
VOCATIONAL-TECHNICAL FEASIBILITY STUDY

No. 5 March 20, 1975

PROJECT OFFICES TO BE CLOSED FOR HOLIDAYS - Both the ASU Project Office and the SAISD Project office will be closed Thursday, March 27, of the Spring Break. If you plan to interview during the holidays you may wish to pick up additional materials this week. The next date for turning in interview data sheets will be Thursday, April 3.

SURVEY TIME EXTENDED - Our survey will continue until April 10, at which time we will have completed San Angelo interviews. If you are having any problems in your area, or are needing help, please call --

Mr. Bargley 655-5741	or	Dr. Harvey 942-2164	or	Annabelle Jones 942-2083

If you would like to work in other districts when yours is complete, please indicate this also. There is still survey work to finish, and your help and enthusiasm are the most valuable assets in interviewing.

VOCATIONAL-TECHNICAL INTERESTS - We are getting more positive response to our survey questions about vocational-technical education. This is encouraging as it may indicate a definite need for this type of training in our city. Many people do not know about this kind of education, and will express a definite interest when informed about it during the interview. You as the interviewer are an integral part of an important effort to inform the public. Keep up the good work!

COUNTY SURVEY BEGUN - Work has begun surveying the 18 counties surrounding San Angelo. Response to the survey has been very gratifying thus far with 80% of the counties answering 'yes' to participation in the survey. There is an interest and enthusiasm in our survey, not only in San Angelo, but in all the Concho Valley Area. This can mean the possible development of more educational programs for all the people in our region.

VOCATIONAL-TECHNICAL FEASIBILITY STUDY

Interviewers' Meeting
March 11, 1975

NAME_____ No.____ School Dist._____

Tract No. _____

Please answer the following questions as completely as possible.

1. Estimate the percentage of your district which has been completed:

   _____

2. Estimate the percentage of interviews which have been misses or refusals.

   _____

3. Estimate the percentage of interviews that involve the identification of some type of education interest:

   _____

4. When do you estimate your district will be complete? By what date?

   _____

5. Are you having any special problems?

6. Do you feel any additional personnel are needed in your area?

PERCENTAGE RESPONSES TO INTERVIEW QUESTIONS 5-14:
EDUCATIONAL NEEDS AND INTEREST SURVEY
(San Angelo Survey)

5. Assuming a good program was offered in this region in _____'s area of interest. would _____consider enrolling in such a program? (If NO, record a "0" and do not go on to additional questions for this person. If YES, determine when the person would most likely be able to start)

0. No --Not interested in program offered in this region	5%
1. Yes --Immediately	32%
2. Yes --Within 6 months	28%
3. Yes --Within 1 year	11%
4. Yes --Within 2 years	5%
5. Yes --Not certain about starting time	19%

6. How much formal education has _____completed?

1. Completed less than high school or GED	23%
2. Completed high school or GED	24%
3. Completed one, two, or three years of college	27%
4. Completed two year Associate Degree Program	2%
5. Completed four year college degree program	14%
6. Completed one or more years of Graduate level work	5%
Not determined	4%

7. Is _____presently enrolled in any type of education or training program?

0. No --Not enrolled	81%
1. Adult Basic Education Program	2%
2. Regular high school program	5%
3. Vocational-Technical Program (beyond high school)	2%
4. Vocational-Rehabilitation Program	1%
5. Two or four year college program	6%
6. Graduate Program	1%
7. Other	2%

8. Employment Status:

1. Full-time employment	50%
2. Part-time employment	9%
3. Full-time student	2%
4. Seasonal employment	1%
5. Retired	2%
6. Unemployed	27%

Percentage Responses to Interview Questions 5-14

9. Employment background:

1. Laborer	6%
2. Semi-skilled	11%
3. Skilled	11%
4. Technical	24%
5. Professional	9%
6. Other	26%
7. None	12%

10. Would the cost of books, tuition, transportation be a major problem?

0. No	74%
1. Yes	18%
2. Don't know	8%

11. Would _____ be eligible to receive financial assistance for additional education because of:

0. No	80%
1. Current military service	4%
2. Veteran benefits	8%
3. Handicap (vocational-rehabilitation)	2%
4. Company educational assistance program	4%
5. Other	2%

12. Would transportation be a major problem in getting to the classes?

0. No	93%
1. Yes	6%
2. Not sure	1%

13. When would be the most convenient time for _____ to attend classes?

0. Not sure or no opinion	14%
1. Weekday mornings	24%
2. Weekday afternoons	6%
3. Late afternoon after 4:00 p.m.	5%
4. Saturday	3%
5. Evenings after 6:00 p.m.	48%

14. Estimate of present income:

0. Could not make estimate	12%
1. Below $4,500	11%
2. Above $4,500	77%

COUNTIES SURVEY QUESTIONNAIRE*

CONCHO VALLEY AREA
ADULT EDUCATION INTEREST SURVEY

WHAT IS ADULT EDUCATION?

Adult education includes a very wide range of formal and informal educational programs for adults. These programs are designed for persons who have a high school diploma or G.E.D. (High School Equivalency) or who are 16 years or older and have not been in school for one year or longer. They include basic education programs for adults wishing to complete high school or earn the G.E.D., Post-secondary Vocational-Technical Programs of all kinds, one-year to four-year college certificate or degree programs, and informal adult and continuing education courses (including independent study and credit-by-examination). There are programs for many purposes -- (1) to develop or improve vocational skills, (2) to develop a second vocation, (3) to enrich, (4) to develop avocation, recreation, or hobby interest, and not the least, (5) to better enjoy life. The programs are designed for adults of all ages from young adults to senior citizens.

WHY AN ADULT EDUCATION SURVEY?

The interest survey is to help identify the programs that are needed and where they are needed by determining the wants, needs, and interests in education of adults in our region. It will give each of us a voice in identifying the adult education we need. Once these needs are identified efforts can begin on offering needed programs when and where they are most needed and to the persons who need them. By having your suggestions it is possible to achieve more and better service from the educational institutions in our region.

HOW CAN YOU HELP?

Just fill out this survey to the best of your ability and return it to school promptly. We would like to survey all persons 16 years or older in your household. It will take only a few minutes of your time and in no way obligates you to take part in these programs should they be developed. We simply want to know what programs you feel you would be interested in if such programs were offered in our region.

If there are several youngsters attending school in your household each one may bring home a copy of this questionnaire. Please use more than one copy if needed and return all copies of the questionnaire to the school. So that we may know that the members of your household have had the opportunity to participate, please check one of the following:

☐ Yes. We have participated.

☐ No thanks. No one in the household is interested at this time.

*The original questionnaire was printed in a four page booklet form.

CATEGORIES OF EDUCATIONAL INTEREST

▶ BASIC EDUCATION

(1.1) Adult Basic Education (basic skills through 8th grade)

(1.2) Completing credits for high school graduation

(1.3) Achieving G.E.D.

(1.4) English as a second language

▶ POST-SECONDARY AND ADULT EDUCATION PROGRAMS
(ALL PROGRAMS MAY INVOLVE COLLEGE CREDIT)

(2.0) Vocational - technical education

- (2.1) Automotive technology
- (2.2) Agriculture technology
- (2.3) Retail and Marketing
- (2.4) Electrical/Electronic technology
- (2.5) Law enforcement technology
- (2.6) Allied health services
- (2.7) Industrial technology
- (2.8) Drafting and Design technology
- (2.9) Other _____ (Identify)

(3.0) Short courses or workshops in a vocational interest area

(4.0) Pre-college remedial work (preparation for college)

(4.1) College one-year certificate program

- (4.2) Medical receptionist certificate program
- (4.3) Other _____ (Identify)

(5.0) College two-year certificate program in fields such as ..

- (5.1) Data Processing
- (5.2) Secretarial Science
- (5.3) Legal Secretary
- (5.4) Medical Secretary
- (5.5) Nursing
- (5.6) Radiology
- (5.7) Commercial Art
- (5.8) Electronics
- (5.9) Other _____ (Identify)

(6.0) College four-year program
(6.1) Selected college courses in interest areas
(6.2) Graduate study

▶ INFORMAL ADULT AND CONTINUING EDUCATION

(7.0) Adult continuing education courses in new vocational interest area
(7.1) Adult continuing education in avocational, recreational, or hobby area
(7.2) College credit by independent study and credit-by-examination

✱ RECORD OF YOUR EDUCATIONAL INTEREST ✱

After looking over the list of educational programs displayed on the opposite page, select the program or programs of interest to you. Record the code number of each of the programs in which you are interested in the space provided. For example if one of your educational interests is 2.1 Automotive Technology record [2][1] in the appropriate spaces. Write in additional interests or information if necessary in the space provided. Please provide the other information requested on this page (Name, etc.) then turn to the back page and complete the address.

Occupational Shortages Summary

Occupational Needs Survey Report from Regional Texas Employment Commission

ANGELO STATE UNIVERSITY
SAN ANGELO, TEXAS 76901

VOCATIONAL-TECHNICAL EDUCATION
FEASIBILITY STUDY

May 15, 1975

Dear Sir:

A study of the occupational needs and adult education needs within the Concho Valley Area is currently being made. The research is being conducted by Angelo State University for the Division of Occupational Research and Development, Texas Education Agency to determine the occupational needs of employers and the occupational interest of adults in the area.

With the support and good participation we have come to expect from business and the citizens of our area, we will be able to provide the best description of occupational needs and interests currently available. This current information on occupational needs will be used to identify what kinds of vocational-technical education and other occupational education programs are needed within our area. Once we have a good idea of the specific occupational needs of our area, we can begin to plan the best way to meet these needs.

We need your help now in a very specific way. We need your estimates of your business' employment needs for the next 18 to 24 months. Isn't this a terrible time to be asking for these kinds of projections! Yes, and we understand the difficulty of this task at this time, but please keep in mind that these are estimates <u>not</u> commitments or pledges. We are asking for a conservative and an optimistic estimate.

Please complete the enclosed survey and return it to us by May 23. Even if you do not identify any additional employments needs, please return the survey so that we will know you have participated. Thank you for your participation.

Sincerely,

J. Noland Harvey, Director
Vocational-Technical Education
Feasibility Study

P.S. This is a follow-up to an earlier request. We would very much like to have your estimates included in the survey.

OCCUPATIONAL NEEDS SURVEY

Instructions

Please complete the Occupational Needs Survey attached by indicating your estimate of the number of additional employees you anticipate needing within the next 18 to 24 months. These are estimates only and do not in any way obligate your company.

Because of current economic uncertainties, we are asking you to offer a conservative estimate (assuming no dramatic recovery of the economy within the period) and an optimistic estimate (assuming a rather dramatic business upturn within the period). These estimates will help us develop long-range plans.

If an occupational category of importance to your firm is not included please write in the occupation under the appropriate heading.

TITLE: KIMBALL OCCUPATIONAL EDUCATION PROJECT. FINAL REPORT.

DESCRIPTOR: *RURAL SCHOOL SYSTEMS; *CAREER EDUCATION; ELEMENTARY SECONDARY EDUCATION; DEVELOPMENTAL PROGRAMS; *PROGRAM DESCRIPTIONS; PROGRAM EVALUATION; INTEGRATED CURRICULUM; CAREER AWARENESS; CAREER EXPLORATION; COOPERATIVE EDUCATION; JOB PLACEMENT; *OCCUPATIONAL GUIDANCE; INSERVICE TEACHER EDUCATION

IDENTIFIER: *NEBRASKA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 85P.

ABSTRACT: THE REPORT DESCRIBES A SCHOOL-BASED CAREER EDUCATION MODEL FOR THE TYPICAL RURAL SCHOOL SYSTEM IN THE STATE OF NEBRASKA, AS IMPLEMENTED IN THE KIMBALL PUBLIC SCHOOLS FROM JUNE 4, 1973 TO SEPTEMBER 30, 1974. THE ELEMENTARY COMPONENT STRUCTURED THE K-6 CURRICULUM AROUND THE THEME OF CAREER OPPORTUNITIES AND REQUIREMENTS WITH INTEGRATED CURRICULUM MATERIALS. THE EXPLORATION COMPONENT PROVIDED STUDENTS IN GRADES 7-9 WITH OCCUPATIONAL EXPLORATION LEARNING MATERIALS. IN GRADES 11-12 THE COOPERATIVE EDUCATION PROGRAM WAS EXPANDED TO PLACE ALL STUDENTS DESIRING WORK ON JOBS AND TO ASSIST DROPOUTS WITH JOB PLACEMENT. AN INTENSIVE JOB TRAINING COMPONENT WAS PROVIDED FOR GRADE 10-ADULT TO PRODUCE ENTRY-LEVEL JOB SKILLS, AND THE GUIDANCE AND COUNSELING COMPONENT PROVIDED OCCUPATIONAL SERVICES FOR GRADES K-ADULT AND CITIZENS OF THE COMMUNITY. INSERVICE WORKSHOPS GAVE TEACHERS INFORMATION ABOUT INTEGRATING CAREER EDUCATION INSTRUCTION INTO THE CURRICULUM. MOST OF THE REPORT CONSISTS OF APPENDED MATERIALS DEVELOPED IN OR FOR THE PROJECT, INCLUDING SOME WORKSHOP PAGES, PRETEST QUESTIONNAIRE FORMS FOR ALL GRADES, AND THE THIRD-PARTY EVALUATION. THE EVALUATION RATED THE GUIDANCE AND COUNSELING PROGRAM HIGHLY, AND THE ELEMENTARY AND JUNIOR HIGH COMPONENTS HIGHER THAN THE SENIOR PROGRAM. THE POSSIBILITY OF ANY POSTSECONDARY AREA IN THE PROJECT WAS CONSIDERED QUITE LOW. (MF)

SUMMARY OF REPORT

FROM JUNE 4, 1973 TO SEPTEMBER 30, 1974

GOALS AND OBJECTIVES OF THE PROJECT

As written in the original proposal the Kimball Schools proposed to implement a school based career education model for the typical rural school system in the state of Nebraska.

The career education model was to be implemented through the following components:

A. ELEMENTARY COMPONENT

Structure the elementary school curriculum K-6 around the theme of career opportunities and requirements in the World of Work, developing integrated curriculum materials.

B. EXPLORATION COMPONENT

Provide all students, grades 7-9, with hands-on occupational exploration learning experiences; using the World of Construction materials when feasible.

C. COOPERATIVE EDUCATION COMPONENT

Expand the present modified cooperative education program, grades 11-12, so it will place on jobs all in-service students who desire work, and follow-up and assist all student drop-outs with job placements.

D. INTENSIVE JOB TRAINING COMPONENT

Develop a continuous progress multi-sensory instructional model for students, grades 10-adult which will produce marketable entry-level job skills, or retain and/or upgrade job skills. The areas of emphasis will be the following disciplines: English, Math, Science, Social Studies, Fine Arts, and the Special Education Program.

E. GUIDANCE AND COUNSELING COMPONENT

Develop a comprehensive occupational guidance, counseling, and placement service grades K-adult, for all "in-and-out" of school citizens of the community. Making use of various occupational inventories such as O.V.I.S. and G.A.T.B. as an integral part of the regular testing program.

PROCEDURES USED IN CARRYING OUT OBJECTIVES

A. ELEMENTARY SCHOOL COMPONENT

The elementary school staff was involved in identification of learning activities which relate to the concept of career awareness through inservice programs with college credit given through Chadron State College. Units were written to include these activities in the curriculum in different areas. The units have been field tested and revised to be used for the second year.

B. EXPLORATION EXPERIENCES COMPONENT

Kimball Public Schools District #1 and #3 identified and evaluated other exploratory programs which have been implemented by other school systems throughout the United States.

Curriculum development emphasized "hands-on" experiences for students in grades 7-9. The learning activities used the concept of multi-media in the instructional units. The "hands-on" occupational exploration was carried out through the regular program by the individual teachers or as a team approach. The World of Construction which was developed under a U.S. Office of Education grant at Ohio State University was implemented as one component of this objective.

C. COOPERATIVE EDUCATION COMPONENT

The inter-disciplinary modified cooperative education program was expanded to include both in-school students and drop-outs (handicapped and disadvantaged) so that they were engaged in saleable skill training programs in local rural business and industrial firms. Emphasis was placed on (1) providing part-time and summer jobs related to the occupation for which the student was preparing, and (2) placing highly drop-out prone students on career related jobs. The counselors worked directly with the teacher-coordinator throughout the full calendar year to assist in identifying and placing students year around. The J.E.T. program is still operated in a modified stage although the program has been expanded.

D. INTENSIVE JOB TRAINING COMPONENT

The intensive job entry skill training portion of the career education model was organized around (1) economically feasible and realistic "in-house" occupational clusters for a rural school system. The "in-house" facet of the program was organized on a continuous progress multi-sensory instructional model based on actual job-proficiency and delivered to the learner in a hierarchy of training which permits "spin-off" at any level with marketable skills. The intensive job entry skill training portion of the career education model is available to youths and adults during the regular school hours, after school and evening, and during the summer months. A program is available for training, retraining and/or upgrading of those youths who have left the public school system due to drop-out (economic condition) and who have completed their high school graduation requirements but desire to have additional training or training in a new area of interest.

E. GUIDANCE AND COUNSELING COMPONENT

The three counselors involved with Kimball Occupational Education Program (KOEP) became familiar with career development theory, explored the world of work, and gained an appreciation for the dignity of all work whatever level of endeavor.

During the school year 1973-74, the counselors carried on a complete and articulated model program of guidance and counseling at all levels, K - Adult. The model program had the following characters: (1) It was based on systems concepts, particularly those presently associated with evaluation and change process models in education, (2) It defined guidance criteria in terms of behavioral objectives, (3) it stressed program objectives which were realistic possibilities within the resources of the participating schools, (4) it provided corrective feedback based on evaluation of the achievements of the program. At the end of the school year, the results were analyzed and recommendations were made for the revisions and refinements of the program next year.

As an extension to the guidance and counseling component, a placement service was established in the community for in-school students and adults. The guidance person worked in cooperation with the cooperative education coordinator, the vocational teachers, and the Nebraska Job Service. Canvasses were made of potential employers for students who wished to work part-time while continuing in school, for students who wish to drop out of school and work full-time, for students graduating from the 12th grade and adults. Assistance was provided during the summer through the Chamber of Commerce secretary to high school students desiring work during the vacation period. Throughout the 1973-74 school year, the placement service refined its procedures on the basis of accumulating experience.

RESULTS AND ACCOMPLISHMENTS

The in-service workshops, four times during the year, provided the teachers with information concerning the theory of career education and instruction in writing units to incorporate career education into the curriculum. The teachers became aware that a different emphasis had to be placed on the units that already existed and that career education wasn't just another subject to add to the already busy day. The K-8 teachers in particular became enthusiastic about when and where this type of instruction could best be included. Many more field trips and special visitors are being scheduled by the teachers than in past years.

In the middle school the home economics teacher whose work had been somewhat career education oriented began to work up many more individualized units including "hands-on" experiences related to occupations. The World of Construction was partially incorporated in the eighth grade industrial arts classes. More activities relating to the health field were included in science and health classes to allow the students to experience this type of occupation.

The modified cooperative education program Job Experience Training (JET) grades 11-12 was expanded to place all in-service students who desired work. It also includes follow-up of each student enrolled in the program as well as assistance to all drop-outs with job placement.

The intensive job training component places a student on a job for a half day as well as providing skills related to the career in classes. Following the intensive training the students are most often hired for a full time position.

The counselors involved in the program continue to seek out and evaluate materials to be used in working with students individually and in groups with classroom teachers. The testing program includes tests related to interests and occupational choice. Counseling at all levels involves the student becoming more aware of himself and his feelings toward other people and activities.

The placement service has been very effective in placing many students during the year. During the summer the secretary of the Chamber of Commerce operated the placement service for the school system.

EVALUATION

KOEP has been in operation for a year and the students in the Kimball schools have been involved in many new and exciting experiences. Activities that they had experienced before took on a new emphasis, that of career education. More field trips were scheduled and more speakers were invited to the classrooms. Many of them now see the reason to learn how to add fractions, write letters in correct form, and study the human body's circulatory system.

Many teachers have discovered that including some career education activities in the already established curriculum adds "spice" to the somewhat "tasteless" lesson. They realize that career education can be included any place at any time for a few minutes or an hour, in a discussion, or as a field trip, and/or through a classroom visitor. Of course, there are some faculty members who still find it difficult to include career education in their classroom because they fail to see how their subject area relates to any occupation.

At the beginning KOEP experienced some administrative problems concerning time involvement of the staff and communication with other school personnel, but once these were resolved the program began to run smoothly. The cooperation of the schools administration concerning field trips and arrangements for speakers has been excellent.

The community has become a very important resource to the Kimball school system. Businessmen and other community people willingly visit the classrooms and guide the students through their places of business.

The results of the pre and post tests show that students are being exposed to careers involving varying amounts of training, education and interests. The post test results listed many more occupations not requiring a college education than did the pre-test.

CONCLUSIONS AND RECOMMENDATIONS

Career Education is an integral part of the Kimball School Districts #1 and #3. At some levels it is being experienced more intensive than at others, but each faculty member is more acutely aware of his/her subjects' relationship to the world of work and how it may influence students. The cooperation received from the community makes the work of the program staff and the instructors much easier.

Teachers who are not currently including career education in their classrooms need added encouragement and assistance from fellow faculty members and program staff. There is a need for information to be filed on field trip evaluation, etc., to be used for future reference by the teachers. An over-all organization plan should be developed K-Adult so that there is very little repetition and units can be revised and up-dated. More frequent personal communication between faculty groups and the program director may help to improve the attitude of some of the teachers.

KIMBALL OCCUPATIONAL EDUCATION PROJECT

FROM JUNE 4, 1973 TO SEPTEMBER 30, 1974

The Kimball School Districts #1 and #3 have, for a number of years, offered strong programs in grades 9 through 12, designed to provide job preparation in agriculture and agri-business occupational areas.

In more recent years job preparation programs in a variety of other occupational areas were developed. Interwoven with this effort was the emergence of a modified cooperative education program. Just prior to the fall of 1972 considerable progress had been made in providing career education experiences for elementary students and some progress had been made in providing exploratory experiences at the middle school level. There was a need for a concentrated effort to expand the program to a K-Adult career education program exemplifying what could be a reality for the typical rural school system in the State of Nebraska.

The original proposal listed five components and the goals and objectives of each:

A. ELEMENTARY COMPONENT

Structure the elementary school curriculum K-6 around the theme of career opportunities and requirements in the World of Work.

B. EXPLORATION COMPONENT

Provide all students, grades 7-9, with hands-on occupational exploration learning experiences.

C. COOPERATIVE EDUCATION COMPONENT

Expand the modified cooperative education program, grades 11-12, so it will place on jobs all in-service students who desire work, and follow-up and assist all student drop-outs with job placements.

D. INTENSIVE JOB TRAINING COMPONENT

Develop a continuous progress multi-sensory instructional model for students, grade 10-adult which will produce marketable entry-level job skills, or retain and/or upgrade job skills. The areas of emphasis will be the following disciplines: English, Math, Science, Social Studies, Fine Arts, and the Special Education Program.

E. GUIDANCE AND COUNSELING COMPONENT

Develop a comprehensive occupational guidance, counseling, and placement service grades K-Adult, for all "in-and-out" of school citizens of the community. Making use of various occupational inventories such as the O.V.I.S. and G.A.T.B. as an integral part of the testing program.

Kimball is a rural town in western Nebraska with a population of about 3500. Kimball has a substantial proportion of middle income families; however, about 13 percent of the families have incomes below the poverty level. The city's economy is dependent mainly on agriculture and supplemented with a very small amount of oil activity.

The local school districts in Kimball enroll approximately 1115 pupils in grades K-12.

TABLE #1 ENROLLMENT

LEVEL	NO. OF SCHOOLS	NO. OF TEACHERS	NO. OF COUNSELORS	NO. OF PUPILS
Elementary K-5	2	28	1	440
Middle School (6-7-8)	1	23	1	325
Senior High School (9-12)	1	25	1	350
Total	4	76	3	1115

To introduce all Kimball Schools faculty to the idea of career education a pre-service workshop was held in August 1973. The workshop was conducted by Dr. Maurice Ward, Program Specialist for Career Development, Department of Vocational Education, University of Northern Colorado, Greeley, Colorado. The over-all purposes of the workshop were to acquaint teachers with career education theory and to provide opportunities for preparation of a total plan as well as an initial unit for each teacher.

A second workshop was held in February 1974. There were two main objectives of this workshop; one was to give the teachers an opportunity to select a common K-12 format for writing their career education units; the other was to provide teachers with an opportunity to meet in grade level or departmental groups and actually write some of their units in the format selected by them earlier in the day. Consultants for the workshop were Mr. Larry Willis, director of the Milford, Nebraska career education project and several Milford teachers. The 90 units which were completed at this workshop were then typed, printed, and distributed to all Kimball teachers.

The third and final workshop was held in May 1974. The workshop was administered by the KDEP personnel without the aid of outside consultants. Teachers attending devoted their time to writing the units taught between February 1974 and May 1974. Approximately 125 units were completed by teachers, grades K-12 and these were typed and printed for distribution to other staff members.

It is the opinion of those given the responsibility of administering the (KDEP) project that the "meat" of success was "selling" the staff and

this was accomplished through the inservice workshops involving the entire staff and the fact that college credit was granted by Chadron State College.

When these workshops were conducted outside of the regular school day, teachers were re-imbursed a nominal wage for attendance.

An evaluation instrument was developed for each grade level K-12 by the original program director and was administered to all KOEP and control school students during the school year 1973-74, and again in September 1974.

This instrument was compiled after exhaustive investigations failed to find an instrument particularly suited to the goals and objectives of the Kimball project. Each level features a distinct overlap from the previous level as well as some questions specifically identified with that level.

The results were tabulated and printed in the publications Kimball Schools Career Education Pre-Test Evaluation 1973-74, and Kimball Schools Career Education Post-Test Evaluation 1973-74. A comparison is currently being made of the results of the two tests.

"What is Your Career Education Quotient?" was the instrument approved as the means of evaluating change in teacher attitude. This was administered during the pre-service workshop.

Prior to the beginning of school in August 1973 an examination was made of a random sample of elementary textbooks to make possible a determination of the degree to which career education concepts were included in the present curriculum. It was found that all of the books either discussed certain occupations very specifically or offered many opportunities for the discussion of the same. During the workshop, teachers at all levels, K-12 commented on the fact that they had for sometime included career education, under a different name and through different methods, in their regular classroom curriculum. Units were developed during the inservice workshops to enhance the materials provided in the textbooks. After experiencing the writing of these units the teachers were able to work up other units for their classrooms.

The elementary units contained many awareness activities and a few "hands-on experiences" at the middle school level THE WORLD OF CONSTRUCTION was partially incorporated in the eighth grade industrial arts classes. More "hands-on" experiences were included in the home-ec, health, science, and math class to show the relationship of these academic disciplines to the WORLD OF WORK.

On the high school level several instructors provided activities in the subject area which simulated job experiences. The cooperative education program and intensive job training program became available to more students enabling them to receive on the job training.

Specific career education materials were few in number at the beginning of the project. The WORLD OF WORK series by Edu-Craft of Detroit was being used by the elementary teachers to expand their social studies curriculum. The same series on a higher level was being used by the middle school counselor in sixth grade guidance classes. Some career education material was used by the high school counselor in the modified co-op classes. Several examples of

commercially prepared career ed materials were ordered. Free materials were requested for each of the four libraries and the counselors developed sets of "on-site" slides of various occupations to be used in conjunction with field trips or as a substitute for them in instances when a field trip is not possible.

Career education centers were formed in the library of each school. All free materials, pamphlets, slides, books, tapes, etc., were placed in this section for the use of faculty and students.

To assist the teacher in scheduling field trips, resource people and other career education activities the Community Resource Questionnaire was developed and sent to all Kimball businesses registered with the City Clerk's Office. Each teacher received a copy of the results of this questionnaire.

The Monthly Report Form was developed to acquire information on the career education activities being provided in each of the classes. Record keeping by the KOEP staff was made much easier by this instrument.

Throughout the year the KOEP staff worked with individual teachers in developing activities and securing speakers which would fit into the existing curriculum.

The results of the comparison between the results of the pre-test and the post-test show that the attitude of the students toward the traditionally low status occupations changed. Whenever the KOEP students were to list occupations of their choice there was a larger number listing three jobs on the post-test than on the pre-test. Many of the questions requiring the job to be identified from its description were answered, with more logical answers on the second test. The topic of careers in day to day conversation is much more prevalent among all students K-12 now than prior to the beginning of KOEP. Observation of the library activities shows many students checking out tapes, filmstrips and reading material related to careers to be used during their study halls and free time.

Not only have the students in the Kimball Schools become more aware of occupations in relation to school subjects and the reasons for studying and learning particular facts, the teachers have learned a great deal about the community and its resources, which has proven very beneficial and improved public relations between school and community. The staff has experienced some dynamic learning. Our community furnished many programs and speakers that the staff hadn't realized were available until they began to "think" career education and search for the resources. The Board of Directors of the Banner-Kimball County Chamber of Commerce and their component (the retail merchants) cooperated 100% with the schools in J.E.T. program as resource consultants and general support in the career education project. This group also acted as an advisory group to the Boards of Education, Administration and teachers in the school systems.

The mere fact that over 40 former students (dropouts) and adults completed the G.E.D. course of study and obtained their General Educational Development Equivalency Certificate speaks well for that component of the project.

The counselors have been instrumental in broadening the high school

curriculum after a study of the results of various tests (I.T.E.D. - S.A.T. - A.C.T. - D.A.T. - O.V.I.S. - G.A.T.B.) which explained a need for different courses which were of interest by the student body, the courses were added.

The Kimball Occupational Education Program has been a reality for one school year and in that time has become an integral part of the curriculum. At some levels and in some classrooms it is being experienced more intensely than at others, but each child has been influenced by it and each faculty member is more acutely aware, even if to a small degree, of his/her subjects' relationship to the WORLD OF WORK.

The revision of units, the obtaining and filing of the information concerning the evaluation of field trips and speakers, the encouragement of teachers to include more career related activities in their classrooms, the assistance given to those faculty members who do not feel secure with a new program and more personal communication between faculty and project are activities which need to be organized and carried out to make an even better program.

WHAT IS YOUR CAREER EDUCATION QUOTIENT?

With education, business, labor, government, and the community being encouraged to become involved in the career education thrust, it is important to become aware of your own knowledge of the movement. Here are some statements about career education. Read each statement carefully and then circle the answer of your choice.

SA if you strongly agree with the statement
A if you agree but not strongly so
N if you are neutral or undecided
D if you disagree but not strongly so
SD if you strongly disagree with the statement

1. Separate courses on career education, with differentiated staff with differentiated salaries, would be better than integrating into existing courses..... SA A N D SD

2. Career education is synonymous of vocational education..... SA A N D SD

3. Career development theory should provide implications for career education..... SA A N D SD

4. Most people in business, industry, and labor would help with career education in the schools..... SA A N D SD

5. The junior high or middle school are the ideal levels for beginning career education..... SA A N D SD

6. Learning environments in career education can be extended beyond the classroom into the home, the community, business, industry, and government..... SA A N D SD

7. A key objective of all education should be preparation for a successful working career..... SA A N D SD

8. Guidance counselors are more competent in guiding persons toward college attendance than toward career possibilities for students..... SA A N D SD

9. Federal and state governments should provide full funding of career education..... SA A N D SD

10. Career education is a basic and viable approach to all education..... SA A N D SD

11. Career education should be available to all students from K through 14..... SA A N D SD

12. The disadvantaged and minority students are groups which could benefit the most from career education..... SA A N D SD

13. Career education should assist students in making appropriate decisions..... SA A N D SD

14. Career education should include assisting students in acquiring entry level job skills..... SA A N D SD

15. A comprehensive career education system would involve the active cooperation and participation of all school personnel and all segments of the community..... SA A N D SD

16. A college degree is the best and surest route to career success..... SA A N D SD

17. In scope, the Comprehensive Career Education Model--school based--consists of three phases: career awareness, career exploration, and career preparation..... SA A N D SD

18. Career education should provide students with an opportunity to become aware of and develop their life career identity..... SA A N D SD

19. Early in the elementary level is the most reasonable place to begin examining the career development process..... SA A N D SD

20. Career education would not change vocational education programs..... SA A N D SD

Kimball Occupational Education Workshop
Kimball, Nebraska
August 21-23, 1973

Purpose

The purpose of the workshop is to:

(1) Acquaint faculty with the philosophy and overview of the career education concept;

(2) Assist the faculty in initiating a process of modifying, refining, adopting, and/or developing of curricular materials integrating career development concepts which will aid in delivering career education; and

(3) Identify the subcomponents of a comprehensive occupational guidance system and initiate process to intensify the career guidance services of the school districts and the community.

Goal Areas

I. Personnel Development

II. Curriculum (Content and learning experiences for faculty and learners)

III. Guidance (Comprehensive career guidance service for supporting teaching/learning processes)

GOAL AREA I PERSONNEL DEVELOPMENT

Goal/s:

A. To design a three-day in-service workshop which will initiate the development of faculty competencies necessary to implement career education.

Objectives:

A1. To acquaint faculty with the philosophy and overview of the career education concept.

A2. To orientate faculty as to the district's mission as related to career development and education.

A3. To gain commitments from the faculty necessary for designing, implementing, maintaining, and improving a career education system.

A4. To involve faculty in curriculum development activities which will facilitate the transition to a career education system.

GOAL AREA II CURRICULUM (CONTENT AND LEARNING EXPERIENCES FOR FACULTY AND LEARNERS)

Goal/s:

A. To assist faculty in providing for the utilization of learning resources, both human and material, to achieve districts' identified learners, outcomes (Kimball Occupational Education Project-- Goals and Objectives).

Objectives:

A1. To assist the faculty in initiating a process of modifying, refining, adopting, and/or developing curricular materials integrating career development concepts which will aid in delivering career education.

A2. To assist the faculty in planning strategies for implementing learning experiences based upon selected learner outcomes.

A3. To assist the faculty in designing explicit career guidance sub-components to compliment instructional activities.

GOAL AREA III GUIDANCE (COMPREHENSIVE CAREER GUIDANCE SERVICE FOR SUPPORTING TEACHING/LEARNING PROCESSES)

Goal/s:

A. To assist guidance personnel in providing for the intensification of career guidance services of the school districts and the community.

Objectives:

A1. To assist the guidance personnel in identifying the sub-components of a comprehensive occupational guidance system.

A2. To assist the guidance personnel and project staff in defining the guidante functions, i.e., roles of counselors, teachers, and other personnel.

A3. To assist the guidance personnel in identifying resources for the groups in A2.

A4. To assist the guidance personnel in the conceptualization of a simplified occupational information and exploration cluster system which will be further examined and refined.

A5. To familiarize guidance personnel as to techniques of organizing professional development programs for all persons involved in the career guidance function.

To fulfill the purpose and to attain the forestated goals and objectives, the workshop program of activities and leadership are herein submitted.

Department of Vocational Education
University of Northern Colorado
Greeley, Colorado 80639

EVALUATION--KIMBALL OCCUPATIONAL EDUCATION WORKSHOP

1) Rate the consultants:

	Hi						Lo

5)	Unpleasant	___	___	___	___	___	___	___	Pleasant

4) What were the significant strengths of this workshop?

5) What content was least useful to you?

6) What should have been covered that was omitted?

August 23, 1973

KIMBALL OCCUPATIONAL EDUCATION PROJECT
Pre-Test Questionnaire

Administrative Instructions

ALL GRADES:
1. Completed questionnaires should be returned to the school counselor.
2. Make-ups will be the responsibility of the counselor.
3. Identifying information is very important. Be sure it is complete on each of the pages.
4. All students, and teachers, should be aware of the fact that there are no "right or wrong" answers. Every question should, however, be responded to in some manner.
5. Pre-test summary information will be available to teachers after the first of the year.

GRADES K-2:
1. Each questionnaire should be administered individually by aides.
2. Question and response alternatives should be used as many times as necessary in order to enable each child to respond to an item.
3. Check the response made by the child. Be careful to avoid verbal or non-verbal clues which might point to a desired answer.

GRADES 3-4:
1. These questionnaires should be administered in a whole class situation by the teacher.
2. Identifying information can be completed as a group.
3. Questionnaires should be read to students prior to their marking individual responses.
4. Each student should individually mark his questionnaire; the teacher can help with different words.

GRADES 5-6:
1. These questionnaires should be administered in a whole class situation by the teacher.
2. Identifying information can be completed as a group.
3. Each student should individually mark his questionnaire; the teacher can help with different words.
4. Other- a. question 8... "those jobs" refers to occupations listed in Item 7.

GRADES 7-8:
1. These questionnaires should be administered in a whole class situation by the teacher.
2. Identifying information can be completed as a group.
3. Each student should individually mark his questionnaire; the teacher can help with different words.
4. Students should be encouraged to give VERY CAREFUL consideration to all possible answers before marking responses.

5. Other:
   a. Question 6 - "kinds of training required" refers to jobs listed in Item 5.
   b. Question 7 - "these jobs" refers to occupations listed in Item 5.

GRADES 9-12: 1. These questionnaires should be administered in a whole class situation by the teacher.
2. Identifying information should be completed individually.
3. Each student should mark his own questionnaire without help from the teacher or other students.
4. Students should be encouraged to give VERY CAREFUL consideration to all possible answers before marking responses.
5. Other:
   a. Question 2 - "Kinds of training required" refers to jobs listed in Item 1.
   b. Question 4 - "these jobs" refers to occupations listed in Item 1.
   c. Questions 6-9 - all students will not give three responses but they should be encouraged to do so.

12. Joe likes to work on cars, and he seems to be very mechanically minded. He's just fair in math and science, but he does have some artistic talent. Joe's thinking about taking engineering in college and becoming an automotive design engineer. What do you think of his attitude?

_____If he wants to study engineering, he should.

_____He should give up the idea of college since he is obviously not college material.

_____He should go to junior college, and if he can make the grade there, then he should go on to regular college.

_____He should talk to the school counselor about the situation and ask him to suggest technical schools or other sources of possible training.

_____Don't know

13. Phyllis likes working with children, and she thinks she might like to make teaching a career. She especially likes the wide range of employment possibilities of the teaching field and the increasingly attractive salaries. Phyllis had the opportunity to work part-time as a teacher aide, but she turned it down since that job would interfere with cheerleading practice. Besides, since she's only going to be a college freshman next year, she still has plenty of time to change her mind if she decides that teaching isn't right for her. What do you think of her attitude?

_____She sounds unsure and probably should have taken the teacher aide job to help her decide.

_____She's right about having plenty of time to decide, so there is nothing wrong with her decision.

_____Her reasoning is good because it shows that she recognizes the importance of participation in high school activities.

_____If she doesn't need the money from the teacher aide job, it doesn't matter if she works or not.

_____Don't know

14. It's rugged, hot work, and it requires a great deal of driving skill. A worker doing this job, doesn't have to have gone to college, but he does need to have some basic skills, individual instruction and practice, and sometimes a special

NAME_____ DATE_____

KIMBALL SCHOOLS

CAREER EDUCATION

PROJECT

THIRD PART EVALUATION

1973 - 1974

By

Nebraska Research Coordinating Unit

Evaluation Team

The activities of the evaluation team have identified basic information available for the project direction. However, the committee was not designed to make comprehensive analysis of the raw data reported in this evaluation.

Recommendations concerning future evaluation design and resources are contained within.

Team Members

Merle Rudebusch	State Department of Education, Division of Vocational Education
Roger Hudson	State Department of Education, Counseling and Guidance Services
Merlyn Gramberg	Chadron State College, Industrial Education
Julie Boettcher	Research Coordinating Unit
Elton Mendenhall	Research Coordinating Unit

KIMBALL SCHOOLS
CAREER EDUCATION
EVALUATION

Introduction

The Kimball, Nebraska Public Schools enrolled approximately 1320 students and consisted of an elementary, middle and senior high school at the beginning of this project. Kimball is a rural town of some 3680 persons, located in Western Nebraska. The city's economy is dependent upon agriculture with a small amount of oil activity in the area.

Evalution Plan

The original evaluation plan was to involve a team of educators in periodic visitations to the project. This evaluation team would observe the on site activities and make recommendations toward project improvement.

The evaluation plan called for consideration of four types of decision making relating to program delivery. These decisions are:

1. Planning decisions which pertain to selection of objectives.
2. Structuring decisions which are those decisions involved in the design of the program to achieve stated objectives.
3. Implementing decisions which are those required for putting the program into operation and carrying it out.
4. Recycling decisions refer to whether the program actually reaches its objectives, and the implications of its success or failure.

Each of the following goals of the project, referred to as Activity Areas, are listed in a later part of this report with corresponding treatments and participants.

Activity Areas:

1. Structure the elementary school curriculum, grades K-6, around the theme of career opportunities and requirements in the world of work.
2. Provide all students, grades 7-9, with hands-on occupational exploration learning experience.
3. Expand the modified cooperative education program, grades 11-12, so it will place on jobs all in school students who desire work and follow-up and assist all dropouts with job placements.
4. Develop a continuous progress multi-sensory instructional model for students, grades 10-adult, which will produce a marketable entry-level job skills, or retrain and/or upgrade job skills.
5. Develop a comprehensive occupational guidance, counseling, and placement service, grade K-adult, for all "in-and-out of school" citizens of the community.
6. Carry on a continuous inservice education program for school staff and people of the community to increase their understanding and upgrade their skills with the career education concept.
7. Evalute in terms of planning, structuring, implementing and recycling.

Evaluation Procedure

Activities surrounding the evaluation plan of the Kimball Project have been hampered by a number of circumstances. During the period of project activity the national scene was threatened by the possibility of gasoline rationing. Kimball, Nebraska being some 376 miles from Lincoln, Nebraska made frequent trips for evaluation impractical. During this same period of time, staff re-assignment and change within the State Department of Education caused the loss of continuity within the plan for an evaluation team.

This evaluation has been carried out through the activities of an alternate committee. Representation was as follows:

1 member -State Department of Education, Division of Vocational Education, Curriculum and Evaluation
1 member -State Department of Education, Counseling and Guidance Services
1 member -Chadron State College, Industrial Education
2 members-Research Coordinating Unit for Vocational Education, Curriculum and Evaluation

Each team member was involved in visitations to the project site and was asked to react to items concerning project implementation and involvement (Appendix A). In addition to the team evaluation, project personnel conducted surveys of student awareness, in the experimental and control schools and identified pre and post test scores of the student body in the Kimball schools in several standard tests (Appendix B). An additional effort of the project evaluation was the tabulation of project activities in relation to activity areas outlined in the original project. (Appendix C).

Conclusions and Recommendations

1. Time constraints of present evaluation team members do not contribute to effective and comprehensive evaluation efforts.
   Recommendation - Project evaluation should be provided through personnel with time and resources available to provide comprehensive evaluative information.

2. The evaluation team thus far has not been able to devote time to a comprehensive evaluation.
   Recommendation - That personnel be assigned to evaluation activity for purposes of:
   1. Continuing evaluation design begun through project proposal and team effort.
   2. Statistical treatment of data collected from student pre and post tests and teacher assessments.

3. The evaluation team reactions to the project indicate strong agreement that the counseling, career awareness, and exploration activities of the project are effective.
   Recommendation - That project direction design activities to concentrate in other areas of project concern such as student placement and comprehensive occupational preparation.

4. The activity list of project accomplishment indicate many activities in areas 1, 2, 5, 6, and 7 (Appendix C).

   Recommendation - Activity area #3

   The project should concentrate upon expansion of the cooperative education and placement aspects of the career education activity.

   Activity area #4

   The project should develop a specific plan of extending the multi-sensory instructional model for levels tenth grade through adult.

5. Although the project budget has not provided for time and resources to conduct an extensive analysis of the data compiled, it is the judgement of this evaluation, that the Kimball Career Education Project has met the requirements of implementation outlined in the original proposal. The evidence of student change documented by pre and post tests, the documentation of teacher and community attitude change are provided by letters of the administrators and by pre and post testing of teachers. The degree of significance is all that remains to be identified from the evaluation effort.

   Recommendation - That the significance of the findings to be identified and analyzed during the final project year in order to provide information supportive to decisions regarding project continuation.

APPENDIX A

A summary of the team evaluation effort is listed below. Each item reacted to by the evaluation team has possible scores of low 0 - high 16.

ITEM	SCORE
1. Extent to which the project is providing for a strong guidance and counseling emphasis.	14
2. Extent to which the project is providing for increasing the self awareness of each student.	12
3. Extent to which the project is providing (elementary students) career awareness options in the world of work.	13
4. Extent to which the project is providing (junior high students) career exploration experiences.	11
5. Extent to which the project is providing (grades 10-14) for job preparation in a wide variety of occupational areas.	10
6. The project is providing for the placement of exiting students.	11
7. The objectives of the project are being implemented according to the stated time schedule.	12
8. The procedures for achieving the objectives are appropriate.	11
9. Extent to which the objectives are being accomplished.	
(a) Elementary occupational awareness	12
(b) Secondary occupational awareness	12
(c) Exploration in junior high levels	9
(d) Senior high career preparation	9
(e) Guidance and counseling activities	12
(f) Placement activities (Senior High)	10
(g) Placement activities (Post Secondary)	7
(h) Articulation with Post Secondary institutions	9
10. Project personnel efforts to coordinate with other similar projects.	11
11. The project staff understand their project duties.	12
12. The project staff effectively perform their duties.	13
13. The project has used appropriate outside consultants or specialists.	13
14. Facilities and equipment for carrying out the program adequate.	16
15. Project personnel see the program as being a K-14 sequence.	9
16. Staff and Administrative inservice	
(a) Elementary level	14
(b) Junior high level	13
(c) Senior high level	9
(d) Post secondary	6
17. Teachers have been able to infuse career development concepts into regular programs.	
(a) Elementary level	13
(b) Junior high level	12
(c) Senior high level	9
(d) Post secondary	3

18.	Curriculum materials have been developed.	
	(a) Elementary level	16
	(b) Junior high level	14
	(c) Senior high level	11
	(d) Post secondary level	4
19.	A system to assure exposure of each student to career clusters has been developed.	11
20.	All students are considered to be in the career education program.	14
21.	The school administrative structure is aware of and supports the program components.	15
22.	The project is affecting the programs of other educational institutions in the state.	9

The following comments are provided in summary of the evaluation team reactions.

1. There is a high regard for the guidance and counseling program in the Kimball Schools supporting the project.
2. The elementary and junior high components of awareness and exploration received ratings higher than the senior program of variety of occupational preparation.
3. Staff inservice activities ranked high in the elementary categories and somewhat lower in the junior high and senior high areas.
4. The indications of the project encompassing the post secondary area are quite low.

Dear Mr. Mendenhall:

As a counselor in the Kimball Schools for the past 10 years, I've noticed a definite need for certain changes in the philosophy and attitude of not only the staff, but the community of Kimball as well.

Kimball has been a community with 2 school systems for a number of years (K-8: 9-12) and due to this organization each school system was more or less "geared" to a traditional course offering which is typical in a conservative rural setting.

The students were "geared" to the college bound" in grades 9 - 12 with no consideration or study being made as to why certain students "drop out" of high school and more important why our graduates were leaving the Kimball community.

The only vocational courses being offered were Vocational Agriculture and Vocational Homemaking. This pattern was present when I arrived 10 years ago.

The need for a "change" is present and everyone hopes that the Career Education project will be the "shot in the arm" or catalyst to bring about this change not only in grades 9 - 12 but from K - 12 and adults.

Sincerely yours,

Charles

Charles O. Morehouse, P.D.Ed.
Director Guidance and Counseling

Lincoln, Nebraska 68508

Dear Mr. Mendenhall:

When I arrived on the scene some 9 years ago as superintendent of the Kimball Schools, I was surprised not only to find 2 separate school districts, but also 2 separate philosophies of education.

The elementary offering was one of "traditional" subject matter areas, and every student was required to remain in his grade until he had mastered the subject matter. The teachers were teaching in the traditional manner; that is, every teacher followed the text and manual to the letter. In the high school, our curriculum was "geared" to the college bound. At this time approximately 55% of our senior graduating class was entering college, with a dropout rate of 40% at the end of the freshman year.

The enrollment in both of the vocational offerings (agriculture and homemaking) was declining.

After a 5 year study of dropouts, our vocational offering was expanded on the secondary level to include machine shop, auto mechanics, and special vocational needs. There appeared to be a student attitudinal change and the Kimball administration became interested in developing a career education after Commissioner Sidney Marland's thrust upon the nation.

I realize this project is not the utopia and will help solve all the problems, however, I'm looking forward with enthusiasm that there will be a noticeable change in attitudes of both the teachers and students toward the World of Work.

Sincerely yours,

Max L. Hensley

October 15, 1974

Mr. Elton Mendenhall
Box 33, Henzlik Hall
University of Nebraska - Lincoln
Lincoln, Nebraska 68508

Dear Mr. Mendenhall:

I find that the time has arrived when we must evaluate our project and I will take this means of expressing my views, based upon observations and participation by the students, teachers and community in our recent project, The Implementation of a Comprehensive, K-Adult Career Education Program in a Rural Setting.

The attitude of students and teachers alike has changed and this change has been due, in no small degree, to our project.

In grades K-6, the awareness concept has been developed and we now notice students and teachers looking forward to more structured field trips with a definite plan of having each participant to become more aware of the different clusters of work. Class sessions are freely devoted to discussions of types of work, stressing the idea that there is dignity in Work. The teachers have developed curriculum units dealing with plans of implementation for the world of work in the various academic areas.

In the middle school, stress has been to correlate activities in greater depth with the elementary grades and more use is made of trips and community speakers in an effort to provide hands-on experiences to the individual.

On our secondard level the counselor has attempted to further develop better use and understanding of the various tests (I.T.E.D., O.V.I.S., G.A.T.B.) and others. Students are instructed in the use of the Dictionary of Occupations.

The vocational courses (agriculture, homemaking, business, T & I, machine shop and auto mechanics) are not the only places of achieving goals but the "main goal" throughout our school system now appears to be one of the teachers and students discussing the world of work and how to be a happy and successful participant, not only in our jobs but recreational living.

Students are receiving a better opportunity to participate in activities by expansion of the work-study program, even though Kimball's is a modified version of the Co-op "G" program.

Teachers have become oriented to the fact that it is not necessary to receive career education as another entity or an extra factor to be added to their curriculum but a means to achieve many of the "goals" in their regular load by

means of enrichment.

If any component is slower than the others in adoption is the one of "Placement." An effort has been made to encompass this part of our project within the scope of Kimball and although placement not only of students, but of former graduates is encouraging, much remains to be achieved in this area. The delivery of instruction to learners on a continuous progress multi-sensory model is being developed and training, re-training and/or upgrading of those youths and adults who have left the public school system is making progress.

In an endeavor to keep my remarks short, I am going to request that Mr. Morehouse, our high school counselor, go into more detail in attempting to provide student information.

I will close stating again that I feel we have the beginning of an attitudinal change in both teachers and students, also the community in achieving our goal of recognizing diginity in the World of Work.

Sincerely yours,

Max L. Hensley

Mr. Elton Mendenhall, Director
RCU - Henzlik Hall
City Campus
University of Nebraska - Lincoln
Lincoln, Nebraska 68508

Dear Mr. Mendenhall:

I am happy to present to you some changes in student attitude and also teacher attitude, which I am of the opinion has developed from our Career Education project which was completed October 1, 1974.

Enclosed are some results of achievement tests in K - 8 and I.T.E.D. in 9 - 12. SAT, ACT, Dropout, G.E.D. graduation and placement.

Hopefully we will have OVIS and Dailey Vocational test results for next year's evaluation.

I am mailing a copy of these materials to the other two members of the evaluation team and if you need additional information, please feel free to contact me.

This delay has been due to my illness and also the "flu" in the schools (Max), we are running slightly behind schedule.

Thanking you for your cooperation, I remain,

Sincerely yours,

Charles O. Morehouse, P.D.Ed.
Director Guidance and Counseling

NOTED IMPROVEMENTS

Establishment of a Career Center in each of the 4 libraries.

Establishment of Vertical career files in each library.

Development of a Career Unit explaining the use of the GATB test results to the individual student (9th grade) as an aid in the selection of a career.

PLACEMENT:

Establish in a minute way, placement bureau for students (summer and after school).

Definitely placed 4 students in local businesses.

TITLE: CAREER EDUCATION NEEDS AND INTEREST STUDY OF MERGED AREA 16.

DESCRIPTOR: *CAREER EDUCATION; *EDUCATIONAL NEEDS; *VOCATIONAL INTERESTS; SCHOOL SURVEYS; COMMUNITY SURVEYS; WORK ATTITUDES; CAREER CHOICE; MANPOWER NEEDS; SCHOOL DISTRICTS; ELEMENTARY SECONDARY EDUCATION; TABLES (DATA)

IDENTIFIER: IOWA MERGED AREA 16

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 147P.

ABSTRACT: A STUDY TO DETERMINE THE CAREER EDUCATION NEEDS AND INTERESTS IN IOWA MERGED AREA 16 IS REPORTED FOR THE CALENDAR YEAR 1975. CAREER INTERESTS WERE SAMPLED IN 17 SCHOOL DISTRICTS INVOLVING STUDENTS, TEACHERS, ADMINISTRATORS, AND PARENTS. CAREER NEEDS WERE DETERMINED FROM INTERVIEWS AND QUESTIONNAIRES WITH INDUSTRY, FAMILIES, SCHOOL ADMINISTRATORS, AND TEACHERS. RESULTS INDICATE THAT STUDENT INTERESTS GENERALLY REFLECTED A FAVORABLE ATTITUDE TOWARD WORK AND CAREERS. HOWEVER, CAREER INTERESTS WERE FREQUENTLY EXPRESSED IN AREAS FOR WHICH THERE WERE NO EMPLOYMENT NEEDS (FOR EXAMPLE, CONSERVATION AND AGRICULTURE). DETAILED RESULTS OF THE STUDY ARE PRESENTED FIRST FOR THE ENTIRE AREA AND THEN BY EACH SCHOOL DISTRICT. THE LAST SECTION OF THE REPORT PRESENTS SOME INFORMATION ON MANPOWER RESOURCES IN AREA 16, MOSTLY FROM STATE AND FEDERAL LABOR STATISTICS. DATA FROM THE SPRING 1975 CAREER EDUCATION NEEDS SURVEY GATHERED BY THE IOWA STATE DEPARTMENT OF PUBLIC INSTRUCTION ARE INCLUDED IN THE APPENDIX. A STRONG PRIORITY RESEMBLANCE TO THE CAREER INTERESTS EXPRESSED IN AREA 16 WAS NOTED IN THE STATE SURVEY, WHICH WOULD TEND TO SUPPORT THE USE OF SMALLER SAMPLES. (MF)

PREFACE

That which follows is the culmination of twelve (12) months effort (January 1975 to December 1975) to ascertain the career education needs and interests for Merged Area 16. This study was made possible through the support of Federal monies allocated through the Iowa State Department of Public Instruction. Those who participated in the project are:

Dr. Kenneth Wold, Consultant, D.P.I.
William Bean, Counselor, WACO
Jerry Berns, Counselor, Marquette
James Chubb, Counselor, New London
John Cooper, Counselor, Notre Dame
Don Finney, Counselor, Central
Marvin Flanders, Counselor, Winfield-Mt.Union
Darrell Hammer, Counselor, Danville

Larry Kerr, Counselor, Wapello
Edward Looney, Counselor, Keokuk
Paul Menke, Counselor, Aquinas
Dr. Larry Meyers, Curriculum Director, Burlington
Bob Nelson, Counselor, Morning Sun
Frank Smith, Counselor, Fort Madison
Dick Whitaker, Principal, West Burlington
Roger Williams, Curriculum Director, Mt. Pleasant
Dr. William Cameron, Curriculum Director, Keokuk
Michael Dunn, Southeast Iowa Planning Commission, Keokuk
Donald Harmon, Iowa State Employment Security Commission, Burlington
Steve Hoschek, Iowa State Employment Security Commission, Burlington
Sam Korb, Manpower Specialist, Burlington
Phil Paule, J. I. Case Company, Burlington
Darrell Rodgers, Director of Chamber of Commerce, Keokuk

Career interests were gleaned from thirteen (13) public school systems and four (4) parochial systems in Area 16. Those population samples involved in the Needs Interests Assessment were students in grade 6 through 12, teachers and administrators K-12, and K-12 parents.

Career needs were ascertained as a result of interviews and questionnaires involving over one hundred ten (110) industries, six hundred eighty-seven (687) parent families, eighty-four (84) school administrators and eight hundred seventy-six (876) elementary secondary teachers.

Total usable student samples numbered nine thousand eight hundred eighty-seven (9,887) which is approximately 70% participation.

CHAPTER I

Career Needs and Interests of Area 16

A General Perspective

Section 1.- Area 16 Career Interests

The results of the student interest reflections in Area 16 tend to reveal a favorable attitude on the part of our youth in terms of general attitude towards work, career choices, etc. The career choices vary widely in priorities from grade six level to grade twelve level among males. As could be expected, the lower grade samples reflect higher interest in the more adventurous type career areas, i. e., sports, truck driving, etc. To illustrate sports and truck driving rank very high in grade six among males in general and we find these career choices nearly non-existent in the top ten career priorities for grade twelve male. Female counterpart career choices tend to be more realistic and consistent throughout the grade levels.

The reference is made in entries four and five to a list of career choices which "appear below" in the original instrument. That list is as follows:

CAREER EDUCATION AREAS:

1. Agriculture
2. Air Conditioning & Heating
3. Architecture
4. Auto Body Repair
5. Auto Mechanics
6. Carpentry
7. Conservation
8. Diesel Mechanics
9. Electronics
10. Heavy Equip. Operator
11. Home Economics
12. Machine Shop
13. Mechanical Drafting
14. Mechanical Technology
15. Medical Assistant
16. Nursing
17. Plumbing
18. Retail Marketing
19. Secretarial-Clerical
20. Truck Driver
21. Welding
22. Construction
23. Marine Science
24. Recreation

Needless to say, this list was not offered to imply that there are no other career areas to consider, rather merely as a suggested sampling of career areas. Opportunity was provided

for the student to reveal with greater specificity career areas of interest.

It should be noted that the Burlington Community students were not surveyed with the same instrument as were the other schools in Area 16. Another survey result conducted by the Boy Scouts of America was employed. The scout survey results were not tabulated by sex and therefore do not appear in this chapter. See Chapter II in which is found the Burlington Community School District.

Generally, around 20% of the youth hold the high school diploma as the highest degree of interest. The college degree appears more coveted at grade 6 (60%) than at grade 12 (35%) which possibly could address itself to a number of factors, not the least important of which is the general disillusionment of formal/traditional education stimulated by the fact that there are presently many degree people who are unable to find work in the area of expertise for which they were trained.

Regarding entrie 4., "Are you now studying career areas as a part of your course work?", as could be predicted the lower grades reflect an indication that career areas are not emphasized, at least, not as much as the upper grades. The interest in studying career areas is rather high (80%) for grades 6-10 with a slight drop for grade 11 (69%).

As to the opportunity provided for exploring career areas in grade 6-11, a 27% indicate yes as a low in grade 6 and grade 10 indicates a high of 65% yes. That is, 27% and 65%, respectively indicate that there is opportunity to explore career areas in their curriculum.

As has been indicated, a high percent (84%) of all grades reflect the attitude of "looking forward to the working world".

Most students (75%) in grades 6-11 recognize the worthwhile purpose of the courses taken now in preparation for future career choices.

Close to 90% of all students interviewed suggest that they enjoy working now. In many instances, however, conditions were placed on the type of work involved.

As inferred by the chapter heading, the foregoing remarks are general and apply to Area 16 in total. For local observations, please refer to Chapter 2

Area 16 Career Interests Grade 6

1. Usable Samples: Female 619 Male 664 Total 1,283

2. Desire a career in:

Female:	No.		Male:	No.

Section 2 - CENIS Results

The ongoing efforts of the Iowa State Department of Public Instruction to ascertain career interest in Iowa is of considerable importance. The most recent data of the Career Education Needs Information System (CENIS) study was gathered last spring (1975). The results include a sampling of 6,119 (6.27%) 11th and 12th grade students of a total of 97,485 in the state. It is interesting to note the strong priority resemblance to the career interests expressed in the Area 16 survey conducted for this study. This would tend to lend more credence to the use of smaller samples. The students were expected to indicate the career choice anticipated after completing their schooling. (See Appendix)

The twenty most frequent occupation choices are represented as follows:

	Freq.		Freq.
Farmer, General	3575 - 58%	Artist	1351 - 22%
Reg. Prof. Nurse	2820 - 46	Vet. Med.	1254 - 20
Gen. Secretary	2729 - 45	Factory Worker	1217 - 20
Sec. School Teacher	2478 - 40	Carpenter	1159 - 19
Auto Garage Mech.	2130 - 35	Prof. Music	1150 - 19
Elem.School Teach.	1850 - 30	Soc. Worker	1142 - 19
C.P.A.	1514 - 25	Construction	1123 - 18
Lawyer/Atty/Judge	1447 - 24	Bookkeeper	1062 - 17
MD/Physician/Surg.	1446 - 24	Cosmet/Beautician	1051 - 17
Receptionist	1436 - 23	Conservation	982 - 16

Note that the Area 16 local survey having a sample of 2159 (70%) 11th and 12th grade students provides the following rank order:

Mechanics	138- 6%
Agriculture	119- 6
Sec./Cler.	119- 6
Education	112- 5
Nursing	89- 4

The same career areas ranked in the top five order in the (CENIS) study. The order is not the same undoubtedly due to the different means used to label career area inclusions. The CENIS study labels career areas with a much greater degree of specificity whereas the local labels are more of a general classification.

Section 3 - Area 16 Career Needs - School Administrators

1. Usable samples: 84

2. Career program needs are reflected by eighty-four Area 16 school administrators.

		Freq.
1.	Mechanics	43 - 51%
2.	Nursing	35 - 42
3.	Sec./Clerical	33 - 39
4.	Agriculture	31 - 37
5.	Carpentry	30 - 36
6.	Electronics	30 - 36
7.	Machine Shop	28 - 33
8.	Auto Body	26 - 31
9.	Recreation	26 - 31
10.	Welding	26 - 31

Hence, over half of the administrators suggest a need for career training in mechanics. As will be noted from the teacher career need priorities their is a close kinship to those priorities for administrators which further validates the findings.

The felt needs from the administrators standpoint agree remarkably with the expressed career interests as reflected by the student samples.

Section 4 - Area 16 Career Needs - Teachers K-12

1. Usable Samples: 876

2. Career program needs:

		Freq.
1.	Mechanics	765 - 87%
2.	Agriculture	536 - 61
3.	Sec./Cler.	523 - 60
4.	Carpentry	522 - 60
5.	Auto Body	518 - 59
6.	Nursing	442 - 50
7.	Construction	434 - 50
8.	Welding	417 - 48
9.	Home Ec.	414 - 47
10.	Med.Asst.	413 - 47
11.	Plumbing	408 - 47
12.	Conservation	407 - 46
13.	Mach.Shop	403 - 46
14.	Electronics	347 - 40
15.	Truck Driver	344 - 39
16.	Recreation	337 - 38
17.	Retail Mktg.	299 - 34
18.	Wildlife Game Worker	279 - 32
19.	Air Cond.	272 - 31
20.	Mech.Drafting	236 - 27

The needs as observed by teachers colaborate remarkably the needs as seen by school administrators. Mechanics, agriculture, sec./cler. and carpentry are in the top five of each list. It would be well to note, as to interpretation, of the 876 teachers sample pool, 765 indicate that there is a need for mechanics training in that particular geographic region. The label "mechanics" includes auto mechanics as well as diesel mechanics.

The teacher responses not only reflect their point of view as to career needs for their particular school area but also the interests as reflected by their students. Too, it might be safe to presume that a majority of the interests reflected by students are stimulated by some of the needs which they recognize from observing their associations with their immediate world, i.e. parents, counselors, etc. Needless to say,

however, the influence of television, movies, etc. tend to exercise a degree of stimulus to promote desire in career areas for which there is no bona fide need. As will be noted from the data the upper grade levels begin to sift from their career choices those areas of adventure which do not afford a justifiable employment need.

Section 5 - Area 16 Career Needs - Industry

As a result of 112 contacts with industries in Area 16, some useful need indicators are realized. The frequencies of needs are as follows:

		Freq.		
1.	Maintenance Mechanics	39	-	35%
2.	Electricians	35	-	31
3.	Welders	33	-	29
4.	Machinists	30	-	27
5.	Safety Standards	29	-	26
6.	Plumbers	21	-	19
7.	Air - Conditioning	18	-	16
8.	Drafting/Blue Print Reading	17	-	15
9.	Instrumentation	17	-	15
10.	Pneumatics	15	-	13

The industrial sample includes corporations whose average size is 160 employees ranging in number from 14 to 1000. A great deal of interest has been stimulated in the area of maintenance type skills. In contacting several industries regarding this apparent need there is indicated that due to the use of more intricate, more elaborate industrial equipment there is a great need for skilled maintenance personnel. The dust mop, window washing custodian is rapidly being forced to gain a versatile expertise in a wide range of mechanical/technical areas for which there is a limited training potential in Area 16.

Regarding the health services needs for Area 16, there apparently is still a dearth in the supply of Registered Nurses and Licensed Practical Nurses in spite of the national thrust in sustaining support for training for health services. The Area 16 hospitals and clinics report a continual need for these health service areas. The Mental Health Clinic at Mt. Pleasant, Iowa, indicates constant need for mental health workers. This type position requires little in degree qualifications or special training. Other health services having a less intense need in Area 16 is the Nurse Aide Orderly.

Naturally, there continues to be a shortage of medical doctors.

Close touch with the Iowa State Employment Commission has revealed periodic needs in the areas of commission sales, cooks, waitresses, truck drivers, T.V. repairmen, welders, auto body, mechanics, draftsmen and engineers. One interesting issue relating to the unemployment situation is the lack of motivation on the part of individuals to seek employment when the benefits of remaining unemployed are so lucrative. The commission reports there are many low paying jobs available for which the pool of applicants are few.

A recent interview with the personnel at the Iowa State Employment Commission Office at Keokuk, Iowa, indicates a relative dearth in the two jobs of opposite levels of skills. That is to say that there is a shortage of highly trained professionals such as health services, psychiatrists, engineers, draftsmen, etc. and on the other end of the spectrum, a shortage of lower paying relatively unskilled type persons such as cooks and waitresses. There are relatively few jobs available for the middle workers and construction workers. Also, there appears no shortage of clerical and office type personnel.

An indication was made that there is an apparent shortage of appliance repairmen.

A frequent retort in regard to the employment picture is, "What we need more of is people who take pride in doing honest work, show up to work on time, and look for something in work besides a paycheck."

Section 6 - Area 16 Career Needs - General Recommendations

It would be a simple matter to record those career areas of mutual need and interest as reflected by the returns. Such a priority ranking might appear as follows:

1. Mechanics
2. Agriculture
3. Education
4. Sec./Clerical
5. Health Occupations
6. Electronics
7. Machine Shop
8. Carpentry
9. Auto Body
10. Welding
11. Conservation
12. Home Economics

A caveat is in order, however. A good deal of caution needs to be exercised in establishing exactly which career areas are marketable. Presently, for example, it would appear that those having training and experience in maintenance mechanics, executive secretary, health occupations, machine shop, welding and carpentry fields would be employable in Area 16. On the other hand, based on current employment manpower data, those having training and background in such career areas as agriculture, conservation, home economics, general secretary and education might experience relative difficulty in gaining employment in Area 16. Continual rememberance of the foregoing remarks should be exercised throughout the course of this presentation.

CHAPTER II

Area 16 Needs and Interests By School Districts

COMMUNITY SCHOOL DISTRICTS
Southeastern Community College
Merged Area XVI

The following section is a district by district analysis of career needs and interests as observed by school administrators, teachers, students and parents of students. The parent sample in each district offers an interesting response pool in as much as this group would presumably represent a cross section of the district employment involvements. Of considerable statistical interest is the frequency of the occurance of certain priority patterns in expressed career needs and career interests. Many of the career needs which are expressed may appear deceptive from an employment needs point of view. To illustrate, conservation and agriculture are two career areas in which a need is expressed in most of the school districts, where in fact there are no prevalent employment needs in these career areas. On the other hand a need expressed for nurses would subsequently be a fertile employment need.

Regarding student responses, it has been suggested earlier that the lower grade students tend to lean to the career areas having what might appear to be more adventure stimulated, perhaps, by the entertainment media. Consequently, the upper grade level results would tend to reflect a more realistic picture of career choices.

Burlington Parochial School District Needs and Interests

A sample population of 497 from the Burlington Catholic Community provides input in the establishment of needs and interests priorities for career areas. This sample includes administrators, teachers and students. As to needs, the priorities together with the frequency of response is given as follows:

		Freq.	
1.	Nursing	16	41%
2.	Mechanics	15	38
3.	Carpentry	15	38
4.	Home Economics	13	33
5.	Agriculture	12	31
6.	Auto Body	12	31
7.	Electronics	11	28
8.	Medical Assistant	11	28
9.	Plumbing	11	28
10.	Sec./Clerical	11	28

As an interpretive note, the frequency column indicates the number of those indicating a felt need for the particular career area and adjacently the percent of the sample expressing this need.

The career interests are reflected by student responses from grades 6 through 12. They are as follows:

Female (240)	Freq.	%	Male (218)	Freq.	%
1. Education	39	16%	1. Sports	21	10%
2. Art	13	5	2. Mechanics	16	7
3. Vet. Medicine	12	5	3. Architecture	11	5
4. Sec./Clerical	10	4	4. Corrections	9	4
5. Nurse	9	4	5. Electronics	9	4
6. Interior Design	9	4	6. Science	8	4
7. Stewardess	7	3	7. Conservation	7	3
8. Psychology	6	3	8. Engineering	7	3
9. Business	5	2	9. Education	6	3
10. Home Economics	5	2	10. Law	5	2

It is of interest to note that the areas of commonality regarding career needs and career interests in the priorities represented are Nursing, Secretarial/Clerical, Mechanics, Home Economics and Electronics.

Subsequently, these career areas would appear to be valid areas in which to focus attention in development of career programs.

Burlington Public School District Needs and Interests

Career needs and interests priorities for the Burlington Public School System are provided from a sample pool including parents, school administrators, teachers and students in grades 8 through 12.

The career needs priorities with the corresponding frequency of the felt need and percentage are as follows:

1.	Mechanics	249 - 53%
2.	Agriculture	223 - 47
3.	Sec./Clerical	210 - 45
4.	Conservation	200 - 42
5.	Auto Body	196 - 42
6.	Medical Assistant	191 - 41
7.	Carpentry	190 - 40
8.	Construction	173 - 37
9.	Welding	171 - 36
10.	Home Economics	168 - 36

The career need sample includes 215 teachers, 16 school administrators and 240 parent families which places the total sample in the neighborhood of 700.[1]

Career interests are ascertained from a total student sample of 1548 from grades 8 through 12. The priorities with frequency of reflected interest are as follows:

1.	Conservation	245 - 16%
2.	Sec./Clerical	223 - 14
3.	Music	160 - 10
4.	Agriculture	144 - 9
5.	Sports/Coach	137 - 9
6.	Home Economics	126 - 8
7.	Education	119 - 8
8.	Nurse	109 - 7
9.	Accounting	105 - 7
10.	Model	96 - 6

This priority listing has been obtained from a recent Boy Scouts Career Assessment Research Project. Note that the career needs and the career interests which exist in common to the listings are Conservation, Sec./Clerical, Agriculture and Home Economics. Also note that two career areas of apparent high need and high interest in Area 16 do not appear in common.

i.e. mechanics and nursing. The lack of appearance of these two popular career areas in the need listing certainly stimulate speculation regarding survey results validity for this particular sample group.

In some cases a career need is strongly suggested but not to indicate that a person so trained is employable. For example, there appears to be a need in Conservation training. However, a well trained person in this career area will in fact have difficulty in obtaining employment.[2] Another career area sustaining a similar role in this respect is Home Economics. Career program development, however, should not be based solely on employability prospects upon completion of the training.

1. The actual figure of 471 was utilized to establish that percents appearing above. The apparent discrepancy appears because of the fact that one survey instrument was used per family which in most cases represents at least two individuals.

2. Iowa State Employment Commission data. June, 1975.

Central Community School District Needs and Interests

A sample of 765 from the Central School Community was obtained from school administration, teachers and parent/ families to ascertain career needs and interests.

The needs are given in a priority listing with the frequency of the felt need from the 108 samples as follows:

		Freq.	
1.	Mechanics	89	82%
2.	Agriculture	69	64
3.	Carpentry	62	57
4.	Sec./Clerical	60	56
5.	Auto Body	53	49
6.	Conservation	53	49
7.	Home Economics	50	46
8.	Nursing	49	45
9.	Machine Shop	45	42
10.	Plumbing	40	37

Of the 108 samples, 61 are teachers, 6 school administrators and 41 parent families.

Being a largely agricultural school district, it is not surprising that there exists a reflection of training need in this career area. Again, it should be recognized that a reflected need in this career area does not mean, necessarily, that such a well-trained person would be immediately employable. It is very probable that the career training is needed for existing personnel in this career area for this geographic region.

Career interests are felt in a priority listing of career interests taken from 657 students in grades 6 through 12 in the Central School System. They are as follows:

Female (308)	Freq.	%	Male (349)	Freq.	%
1. Sec./Cler.	40	13%	1. Mechanics	67	19%
2. Education	32	10	2. Truck Driver	60	17
3. Nurse	31	10	3. Agriculture	56	16
4. Vet.Medicine	27	9	4. Sports	30	9
5. Home Economics	20	6	5. Conservation	24	7
6. Housewife	12	4	6. Carpentry	21	6
7. Social Work	11	4	7. Auto Body	18	5
8. Animals	10	3	8. Electronics	13	4
9. Corrections	9	3	9. Construction	10	3
10. Agriculture	8	3	10. Architecture	8	2

Again, a commonality exists in regard to career needs and career interests; we find them in mechanics, agriculture, carpentry, sec./clerical, nursery, home economics, conservation, and auto body. This strongly suggests that these career areas are worthy of attention in regard to career program development for the Central School District. Too, in regard to these career needs, particular attention ought to be drawn to the fact that reference is made to the training need for such career areas without regard to employability in some cases.

Danville Community School District Needs and Interests

Career needs and interests in the Danville School District are gleaned from a sample of 369. Those participating include school administrators, teachers, parent families and students in grades 6 through 12. The priorities are represented together with the frequencies of the felt career need as follows:

		Freq.	
1.	Agriculture	37	66%
2.	Mechanics	35	63
3.	Sec./Clerical	34	61
4.	Auto Body	30	54
5.	Carpentry	28	50
6.	Welding	27	48
7.	Conservation	24	43
8.	Electronics	22	39
9.	Home Economics	21	38
10.	Machine Shop	21	38

Again, as in many school districts in Area 16, there is a predominance of agriculturally oriented need reflections. Too, there are no assured inferences that those skilled in the above career areas are necessarily employable in this district.

Priorities in career areas as to interest is represented by 315 students in grades 6 through 12. The career interest priorities are as follows:

Female (144)	Freq.	%	Male (171)	Freq.	%
1. Education	24	17%	1. Sports	19	11%
2. Sec./Clerical	23	16	2. Mechanics	18	11
3. Nursing	16	11	3. Agriculture	13	8
4. Stewardess	12	8	4. Conservation	11	6
5. Vet. Medicine	8	6	5. Vet. Medicine	10	6
6. Conservation	7	5	6. Truck Driver	9	5
7. M.D.	7	5	7. Corrections	8	5
8. Beautician	6	4	8. Education	8	5
9. Housewife	6	4	9. Science	7	4
10. Agriculture	3	2	10. Auto Body	6	4

Common priorities existing between career needs and career interests are agriculture, mechanics, sec./clerical, conservation and auto body. These career areas would seem to be fertile areas to focus upon in consideration for expansion in career program development since both need and interest is inferred. Again, it is well worth keeping in mind that a career training area such as in agriculture might not imply employability subsequent to the training since the inference may be the need to train existing agricultural personnel.

Fort Madison Parochial School Districts Needs and Interests

The Ft.Madison Parochial school system is represented by 332 samples consisting of school administrators, teachers and students in grades 6 through 12 in the establishment of career needs and interests.

Those priorities in career needs together with the corresponding frequencies of felt needs are as follows:

		Freq.	
1.	Mechanics	12	75%
2.	Agriculture	11	69
3.	Sec./Clerical	9	56
4.	Carpentry	8	50
5.	Conservation	8	50
6.	Construction	8	50
7.	Electronics	8	50
8.	Machine Shop	8	50
9.	Medical Assistant	8	50
10.	Retail Marketing	8	50

The need reflections are made on the basis of a 16 sample pool. Even though the sample pool is relatively small, it is interesting to note the priority similarity with the needs reflected in other school districts represented by a much larger sampling.

Career interests in the Parochial Community are provided from a sampling of 316 students in grades 6 through 12. The priorities which exist together with the felt need frequencies are as follows:

Female (170)	Freq.	%	Male (146)	Freq.	%
1. Education	28	16%	1. Agriculture	14	10%
2. Medicine	13	8	2. Sports	12	8
3. Nursing	13	8	3. Electronics	11	8
4. Sec./Cler.	12	7	4. Education	8	5
5. Child Care	8	5	5. Conservation	7	5
6. Soc. Work	5	3	6. M.D.	6	4
7. Vet. Medicine	5	3	7. Mechanics	6	4
8. Biology	4	2	8. Music	6	4
9. Home Economics	4	2	9. Construction	5	3
10. Animals	3	2	10. Science	5	3

Regarding common career tendencies in career needs and career interests there are agriculture, mechanics, sec./clerical, conservation and construction. It is interesting that the career area of nursing apparently is not felt among the adult sample. In all probability a larger need sampling would have surfaced a stronger reflection of nursing needs.

It is interesting to note that in spite of the seeming abundance of teachers which are reported to be in the employment field, there is still a strong interest in choosing education as a career choice in nearly all districts in Area 16.

Fort Madison Public School District Needs and Interests

Career needs and interests are taken from a sampling of 1,709 in the Fort Madison School District consisting of school administrators, teachers, parent families and students.

The career needs are taken from a sample of 151 adults in the district and are represented in a priority listing as follows:

		Freq.	
1.	Mechanics	125	83%
2.	Agriculture	103	68
3.	Carpentry	86	57
4.	Auto Body	85	56
5.	Sec./Clerical	83	55
6.	Home Economics	78	52
7.	Construction	76	50
8.	Conservation	73	48
9.	Medical Assistant	72	48
10.	Plumbing	72	48

Again, the frequency column above reveals the number out of the sample pool (151) who indicate there is the respective need as indicated. Too, this is not to be interpreted for example, that 125 mechanics are needed in the Ft. Madison District.

Career interests are gleaned from a sample pool of 1558 students in grades 6 through 12. The priorities are given as follows with the frequencies of the felt interest:

Female (660)	Freq.	%	Male (898)	Freq.	%
1. Sec./Clerical	118	18%	1. Mechanics	84	9%
2. Education	99	15	2. Truck Driver	57	6
3. Nurse	64	10	3. Sports	56	6
4. Vet. Medicine	32	5	4. Electronics	47	5
5. Art	27	4	5. Agriculture	46	5
6. Social Work	20	3	6. Conservation	30	3
7. Housewife	19	3	7. Corrections	28	3
8. M.D.	19	3	8. Carpentry	23	3
9. Beautician	15	2	9 Education	23	3
10. Music	15	2	10. Engineering	16	2

A close look at the career needs which appear as career interests reveals that mechanics, agriculture, carpentry, sec./clerical, and conservation are common career choices. These particular career areas might be serious considerations for attention in program development since both need and interest appears to exist in strong measure. As was true in the Ft. Madison Parochial needs inferrence, there is evidenced a similar lack of need for nurses in the public school district which would at least give rise to the possibility that there is not a great shortage of nurses in the Ft. Madison area.

The career needs and interests in both the parochial and public sectors bear a remarkable resemblance to each other in the Ft. Madison community.

Keokuk Parochial School District Needs and Interests

A population sample of 169 in the parochial community of Keokuk consisting of school administrators, teachers and students provide input in establishment of career needs and interests priorities. The career need priority listing appears as follows:

		Freq.	
1.	Sec./Clerical	12	57%
2.	Nursing	10	48
3.	Mechanics	9	43
4.	Auto Body	8	38
5.	Agriculture	6	29
6.	Carpentry	6	29
7.	Conservation	6	29
8.	Construction	6	29
9.	Electronics	6	29
10.	Machine Shop	6	29

In spite of the relatively small sampling there bears a strong resemblance to other need expressions in Area 16. Here, for example, 12 of the 21 sample pool indicate a need for Sec./Clerical emphasis in the Keokuk area.

The career interests for the Parochial community are obtained from 148 students in grades 6 through 12. The priority of interests together with the frequency of desired interest is as follows:

Female (72)	Freq.	%	Male (76)	Freq.	%
1. Sec./Clerical	10	14%	1. Mechanics	9	12%
2. Nursing	9	13	2. Truck Driver	8	11
3. Education	7	10	3. Architecture	5	7
4. Medicine	5	7	4. Electronics	5	7
5. Architecture	3	4	5. Education	4	5
6. Law	3	4	6. Engineering	4	5
7. Music	3	4	7. M.D.	4	5
8. Soc. Work	3	4	8. Science	4	5
9. Vet. Medicine	3	4	9. Marine Sci.	3	4
10. Accounting	2	3	10. Sports	3	4

The female interest choices appear more congruent with the area findings than do the male counterparts. Again it is interesting to note that the career area of truck driving ranks high in nearly all school districts in the lower grade levels and is scarcely represented in the 12th grade interest entries.

The career needs and career interests which appear to be shared mutually are sec./clerical, nursing, mechanics, and electronics. This obviously suggests program areas which might have potential in future career development in the school systems.

Keokuk Public School District Needs and Interests

The sample pool for the Keokuk Community School District included 1381 involving 92 teachers, 11 administrators, 117 parent families and 1161 students ranging from grades 6 to 12.

The career needs as felt by the adult sector are listed in a priority fashion as follows:

		Freq.	%
1.	Mechanics	167	76%
2.	Nursing	114	52
3.	Medical Assist.	103	47
4.	Electronics	101	46
5.	Auto Body	94	43
6.	Carpentry	94	43
7.	Agriculture	92	42
8.	Sec./Clerical	92	42
9.	Welding	89	40
10.	Machine Shop	87	40

The need for sec./clerical emphasis appears to be less typically represented in the public system than in the private. This lower priority rating is more reflective of the type experiences college students are sustaining in job finding patterns for the Keokuk area.[1]

The nursing need reflected above is consistent with the needs as indicated by interviews with Keokuk health services personnel. (See page 19)

The career interests for the Keokuk School District youth are gleaned from students in grades 6 through 12.

The priority listing with corresponding frequencies are as follows:

1. SCC Follow-up Study of 1974 graduates in Sec./Clerical programs.

Female (569)	Freq.	%	Male (592)	Freq.	%
1. Education	82	14%	1. Mechanics	82	14%
2. Nursing	59	10	2. Truck Drivers	59	10
3. Sec./Cler.	39	7	3. Sports	49	8
4. Music	21	4	4. Conservation	23	4
5. Vet. Medicine	21	4	5. Electronics	23	4
6. Art	20	4	6. Music	17	3
7. Soc. Work	17	3	7. Carpentry	14	2
8. Home Ec.	15	3	8. Agriculture	13	2
9. Housewife	14	2	9. Auto Body	13	2
10. Animals	11	2	10. Construction	13	2

The career areas which mutually appear in high priority in both the career needs and career interest listings are mechanics, nursing, electronics, agriculture, sec./clerical, carpentry, and auto body. These career areas would seemingly be fruitful areas upon which to focus attention in the development/expansion of future career programs in Keokuk. This mutual listing is identical to the Keokuk Parochial mutual listing with the exceptions of carpentry, agriculture and auto body.

Marquette Parochial School District Needs and Interests

A sample population of 403 from the West Point community is utilized to establish career needs and interests priorities. Of the 403, 25 are teachers, 2 administrators, and 33 parent families. The career needs as felt by this sector are:

		Freq.	
1.	Agriculture	38	63%
2.	Mechanics	31	52
3.	Machine Shop	30	50
4.	Carpentry	29	48
5.	Sec./Clerical	29	48
6.	Conservation	23	38
7.	Welding	21	35
8.	Medical Assist.	19	32
9.	Auto Body	18	30
10.	Construction	17	28

The strongly felt need for emphasis in agriculture is no surprise considering the local economic activity. However, as mentioned earlier, the career area of agriculture should not be regarded as a highly employable area even though the inference is suggested.

As to career interests for the West Point Community, indicators are provided from interest reflection of students in grades 6 through 12. They are as follows:

Female (151)	Freq.	%	Male (192)	Freq.	%
1. Nurse	21	14%	1. Agriculture	60	31%
2. Education	20	13	2. Mechanic	30	16
3. Sec./Clerical	12	8	3. Electronics	12	6
4. Business	9	6	4. Conservation	6	3
5. Beautician	8	5	5. Auto Body	5	3
6. Music	8	5	6. Carpentry	5	3
7. Art	6	4	7. Business	4	2
8. Home Ec.	6	4	8. Law	4	2
9. Med. Asst.	4	3	9. Truck Driver	4	2
10. Vet. Medicine	3	2	10. Construction	3	2

As is noted, the mutual career areas shared by both needs and interests are agriculture, mechanics, carpentry, sec./clerical, conservation, auto body and construction. These career areas should be considered in the development of future career programs. Particular attention might be focused on the relatively high interest directed towards agriculture among males. It should continue to be kept in mind that the need emphasis suggested does not necessarily reflect employability in the emphasis areas.

Mediapolis School District Needs and Interests

The career needs and interests of the sample of the Mediapolis School District is gleaned from 654 people consisting of school administrators, teachers,students and parents.

The priority listing of needs which are inferred are given (together with frequencies) as follows:

		Freq.	
1.	Mechanics	71	87%
2.	Agriculture	51	62
3.	Sec./Clerical	43	52
4.	Nursing	39	48
5.	Carpentry	37	45
6.	Auto Body	36	44
7.	Machine Shop	34	41
8.	Plumbing	34	41
9.	Electronics	33	40
10.	Home Economics	32	39

As is true of the majority of the school districts, the predominant livelihood is agriculturally related. Mediapolis being no exception yields a reflection of strong need in mechanics and agriculture.

The career interests are inferred on the basis of responses given by 572 students in grades 6 through 12. The priority listings with corresponding frequencies are as follows:

Female (285)	Freq.	%	Male (287)	Freq.	%
1. Nursing	39	14%	1. Agriculture	69	24%
2. Sec./Clerical	31	11	2. Mechanics	28	10
3. Education	28	10	3. Truck Driver	18	6
4. Art	14	5	4. Conservation	10	3
5. Home Ec.	12	4	5. Electronics	10	3
6. Housewife	11	4	6. Sports	8	3
7. Vet. Medicine	9	3	7. Engineering	7	2
8. Social Work	8	3	8. Carpentry	6	2
9. Int. Decor.	7	2	9. Music	5	2
10. Music	7	2	10. Art	4	1

In noting the career areas which mutually appear as an expression of both need and interest, there is found mechanics, agriculture, sec./clerical, nursing, carpentry, electronics, and home economics. Again we note, that this mutual listing appears to be the rule for the communities in Area 16.

Morning Sun Community School District Needs and Interests

A population sample of 192 in the Morning Sun District provides a basis for a career needs and interest assessment. Concerning needs, a sample of 38 adults indicate the following priorities:

	Freq.	
1. Mechanics	27	71%
2. Agriculture	22	58
3. Carpentry	19	50
4. Auto Body	14	37
5. Home Economics	10	26
6. Machine Shop	10	26
7. Sec./Clerical	10	26
8. Construction	9	24
9. Conservation	8	21
10. Medical Assist.	8	21

This priority listing is a typical need inference given by a community which has a large agricultural makeup. Note the exlusion of nursing and the low priority of Sec./Clerical career areas typically at the forefront in priority.

The interest reflection is gleaned from 154 students in grades 6 through 12 in the Morning Sun School System. The priority ranking suggested by the responses is as follows:

Female (66)	Freq.	%	Male (95)	Freq.	%
1. Sec./Clerical	13	20%	1. Agriculture	13	14%
2. Education	10	15	2. Mechanics	13	14
3. Nurse	7	11	3. Truck Driver	8	8
4. Beautician	5	8	4. Electronics	8	8
5. Business	4	6	5. Auto Body	7	7
6. Home Economics	2	3	6. Conservation	6	6
7. Music	2	3	7. Construction	5	5
8. Psych.	2	3	8. Vet. Medicine	3	3
9. Vet. Medicine	2	3	9. Heavy Eq.Op.	2	2
10. Agriculture	2	3	10. M.D.	2	2

The mutual career areas which are reflected in both the career need and career interest areas are mechanics, agriculture, home economics, auto body, sec./clerical, conservation, and construction.

Note that nursing is excluded from the female choice. It might be safe to presume that there is no nursing shortage in the Morning Sun District since this need is not inferred from the need listing. Career program development decisions could presumably be enhanced by considering those mutually well represented career areas.

Mt. Pleasant Community School District Needs and Interests

Mt. Pleasant career needs and interests are ascertained on the basis of responses given by a 1172 sample pool. Those involved include school administrators, teachers, students and parents.

The priority ranking of the need expressions with the frequencies are as follows:

		Freq.	
1.	Mechanics	111	85%
2.	Agriculture	87	67
3.	Carpentry	81	62
4.	Sec./Clerical	73	56
5.	Auto Body	71	55
6.	Electronics	64	49
7.	Construction	63	48
8.	Nursing	62	48
9.	Plumbing	62	48
10.	Medical Assist.	61	47

The needs are derived from a pool of 130 adults in the Mt. Pleasant district. The strong resemblance to other Area 16 need rankings will be noted.

The career interests are obtained from a sample pool of 1042 students in the Mt. Pleasant school system involving grades 6 through 12. The career interests rankings are as follows:

Female (509)	Freq.	%	Male (533)	Freq.	%
1. Education	74	15%	1. Mechanics	77	14%
2. Nursing	72	14	2. Agriculture	49	9
3. Sec./Clerical	47	9	3. Truck Driver	46	9
4. Vet. Medicine	37	7	4. Sports	35	7
5. M.D.	29	6	5. Education	27	5
6. Art	23	5	6. Electronics	26	5
7. Beautician	16	3	7. Conservation	22	4
8. Music	15	3	8. Carpentry	18	3
9. Soc. Work	13	3	9. Architecture	16	3
10. Med. Assist.	12	2	10. Drafting	15	3

The career areas having mutual emphasis in both need and interest are mechanics, agriculture, sec./clerical, nursing, carpentry, electronics, and medical assistant. These mutual areas should draw attention to those interested in the development/expansion of career areas. Again, this mutual inference is prevalent throughout the districts in Area 16, particularly mechanics, agriculture, sec./clerical, and nursing.

New London Community School District Needs and Interests

Career needs and interests for the New London School District are drawn from a sample pool of 393 respondents. These respondents include school administrators, teachers, students and parents.

The need rankings together with the frequencies of the felt needs are given as follows:

		Freq.	
1.	Mechanics	35	51%
2.	Agriculture	34	50
3.	Sec./Clerical	28	41
4.	Auto Body	25	37
5.	Medical Assistant	23	34
6.	Welding	22	32
7.	Carpentry	21	31
8.	Construction	20	29
9.	Machine Shop	20	29
10.	Conservation	19	28

The New London need priorities are very typical of those throughout Area 16. It is interesting to note that those school districts having agriculture as the most prominent economic activity in nearly every case produce a first and second in mechanics and agriculture, respectfully in the needs analysis. Quite likely the mechanics need is an off-shoot of the mechanical aspects of agricultural involvements.

The career interests of the student sample pool of the New London District are provided by 325 respondents in grades 6 through 12. The ten highest rankings together with the corresponding frequencies are given as follows:

Female (166)	Freq.	%	Male (159)	Freq.	%
1. Education	31	19%	1. Mechanics	29	18%
2. Nursing	26	16	2. Agriculture	18	11
3. Sec./Clerical	24	14	3. Sports	16	10
4. Vet. Medicine	9	5	4. Truck Driver	15	9
5. Beautician	6	4	5. Aviation	7	4
6. M.D.	4	2	6. Heavy Eq. Op.	6	4
7. Home Economics	4	2	7. Art	5	3
8. Housewife	4	2	8. Education	5	3
9. Social Work	4	2	9. Electronics	5	3
10. Animals	3	2	10. M.D.	4	3

The career areas having mutually common representation in both career needs and career interests are mechanics, agriculture and sec./clerical. These mutual career areas might be serious consideration for future program development and/or expansion. The absence of nursing expressed as a career need could suggest a stable supply/demand situation among nurses in the New London District.

Waco Community School District Needs and Interests

Waco Community District needs and interests are reflected from 283 respondents involving administrators, teachers, parents,and students.

The career needs represented are gleaned from a sample pool of 22 respondents and the ten most frequently suggested are:

		Freq.	
1.	Mechanics	19	86%
2.	Agriculture	18	82
3.	Conservation	14	64
4.	Carpentry	13	59
5.	Construction	13	59
6.	Nursing	13	59
7.	Welding	12	55
8.	Auto Body	11	50
9.	Plumbing	11	50
10.	Sec./Clerical	11	50

As is true in the majority of other districts, mechanics and agriculture are ranking first and second respectively in need emphasis. Sec./Clerical need ranks substantially lower in priority in this district than in the majority of districts in Area 16.

Regarding career interests in the Waco School District, we find a sample pool of 261 respondents involving students in grades 6 through 12.

The interest priorities are represented with the corresponding frequencies as follows:

Female (120)	Freq.	%	Male (141)	Freq.	%
1. Sec./Clerical	26	22%	1. Agriculture	48	34%
2. Education	20	17	2. Mechanics	18	13
3. Nursing	18	15	3. Electronics	10	7
4. Social Work	6	5	4. Conservation	9	6
5. Child Care	4	3	5. Truck Driver	8	6
6. Beautician	4	3	6. Auto Body	5	4
7. Writer	4	3	7. Accounting	4	3
8. Medical Asst.	4	3	8. Art	3	2
9. M.D.	3	3	9. Computer	3	2
10. Stewardess	3	3	10. Law	3	2

In noting the mutually shared career areas of strength in both the need and interest expressions, there is found mechanics, agriculture, conservation, nursing, auto body, and sec./clerical. This would suggest some career areas to focus attention upon in career development and/or career expansion in the Waco School District. Again, it is worth noting that the degree of employability of some career areas is questionable. That is, producing a person with expertise in say, conservation, might be a fruitless venture if job placement afterwards is uppermost in aim notwithstanding the importance of conservation principles.

Wapello Community School District Needs and Interests

Community career needs and interests are represented by 494 respondents consisting of school administrators, teachers, and students.

The career needs are a reflection of responses by 34 teachers and 2 administrators. They are as follows:

		Freq.	
1.	Mechanics	32	89%
2.	Agriculture	27	75
3.	Carpentry	24	67
4.	Wildlife Game Wkr.	24	67
5.	Recreation	23	64
6.	Sec./Clerical	23	64
7.	Welding	23	64
8.	Auto Body	22	61
9.	Nursing	22	61
10.	Plumbing	22	61

These priorities are typical of the rural community in Area 16. It is of interest that conservation reached a popularity frequency of 19. The close kinship between wildlife game worker and conservation would indicate that there is a fairly popular need in this entire spectrum. It should be noted, however, that undoubtedly the need for such training is stressed rather than the existence of a manpower shortage. As has been suggested before the local and statewide employment data would indicate that there is no manpower shortage in conservation related occupations.

Career interests are established from 458 respondents in grades 6 through 12. The priorities with the corresponding frequencies are as follows:

Female (208)	Freq.	%	Male (250)	Freq.	%
1. Education	31	15%	1. Agriculture	38	15%
2. Sec./Clerical	28	13	2. Mechanics	35	14
3. Nurse	25	12	3. Sports	25	10
4. Interior Des.	14	7	4. Conservation	15	6
5. Art	11	5	5. Electronics	15	6
6. Vet. Medicine	9	4	6. Truck Driver	15	6
7. Animals	8	4	7. Carpentry	13	5
8. Home Economics	7	3	8. Welding	12	5
9. Sports	7	3	9. Architecture	7	3
10. Mechanics	6	3	10. Corrections	7	3

In observing those career areas which hold mutual rank in both career need and career interest expressions there are found mechanics, agriculture, carpentry, sec./clerical, welding, conservation/ wildlife, and nursing. Therefore, in career area program development, the Wapello District might give serious consideration to these areas of mutual emphasis in need and interest. Again, need expressions do not always suggest manpower shortages. To illustrate, there is a need for more honest people everywhere, this does not provide assurance that an honest person will experience ease in gaining employment. However, employability should not be the only consideration in program development.

West Burlington Community School District Needs and Interests

West Burlington district career needs and interests are established from a sample pool of 385 consisting of school administrators, teachers, students and parents.

The needs ranking with the corresponding frequencies are given as follows:

	Freq.	
1. Mechanics	36	64%
2. Sec./Clerical	30	54
3. Auto Body	28	50
4. Welding	28	50
5. Carpentry	25	45
6. Machine Shop	25	45
7. Plumbing	25	45
8. Home Economics	24	43
9. Conservation	23	41
10. Construction	22	39

Again, mechanics holds a first order priority in need assessment. Apparently, there is no reflection of need for health services in the upper ten rankings. What this implies is uncertain since other sources would indicate there is a shortage of ADN's, LPN's, M.D's, etc. throughout Area 16. It would be interesting to know the number of respondents, say in the mechanics need expression, whose stimulation to respond was the result of bad experience in having the family automobile repaired. Whether such a basis is reflective of a skill shortage or general irresponsibility is open to question.

Career interests are ascertained on the basis of responses from 329 students in grades 6 through 12.

The rank and frequencies of responses are as follows:

Female (160)	Freq.	%	Male (169)	Freq.	%
1. Sec./Clerical	26	16%	1. Conservation	19	17%
2. Education	24	15	2. Mechanics	14	8
3. Nurse	17	11	3. Sports	9	5
4. M.D.	9	6	4. Drafting	8	5
5. Psychology	7	4	5. Architect	7	4
6. Housewife	5	3	6. Education	7	4
7. Stewardess	5	3	7. Law	6	4
8. Model	4	3	8. Truck Driver	6	4
9. Social Work	4	3	9. Welding	6	4
10. Science	3	2	10. Carpentry	5	3

The career areas of mutual emphasis in need and interest appear to be mechanics, sec./clerical, welding, carpentry, and conservation. These mutual areas might deserve attention in the development and/or expansion of career programs. It is of interest that the Burlington needs indicator also ranks sec./clerical and conservation as being number one in priority for females and males respectively. Too, there is no indication of need or interest emphasis for agriculture in West Burlington even though the majority of school districts in Area 16 do bear such an indication. In noting the map on page 23, the West Burlington agricultural involvements would be naturally limited by the fact that the district is largely urban which subsequently justifies the foregoing remark.

Winfield-Mt.Union Community School District Needs and Interests.

Winfield-Mt.Union career needs and interests are revealed from a total sample pool of 317. These includes school administrators, teachers, parents and students. The need priorities are from 73 adult responses. They are:

		Freq.	
1.	Mechanics	45	62%
2.	Agriculture	43	59
3.	Sec./Clerical	36	49
4.	Carpentry	35	48
5.	Auto Body	31	42
6.	Med. Assist.	31	42
7.	Welding	29	40
8.	Construction	28	38
9.	Electronics	27	37
10.	Home Economics	27	37

Again, there is found the strong need emphasis for mechanics and agriculture which have frequently appeared in sequence in high order of rank. Nursing appears unrepresented in rank. This could suggest that there are no pressing employment needs in this health occupation locally which is contrary to the Area 16 nursing needs generally.

The career interests for this district are drawn from 244 students in grades 6 through 12. The priority listing is as follows:

Female (118)	Freq.	%	Male (126)	Freq.	%
1. Sec./Clerical	20	17%	1. Agriculture	38	30%
2. Education	17	14	2. Mechanics	18	14
3. Vet. Medicine	14	12	3. Conservation	8	6
4. Nursing	9	8	4. Electronics	7	6
5. Conservation	7	6	5. Carpentry	6	5
6. Soc. Worker	6	5	6. Auto Body	5	4
7. Home Economics	5	4	7. Aviation	5	4
8. M.D.	4	3	8. Construction	3	2
9. Animals	3	3	9. Drafting	3	2
10. Recreation	3	3	10. Law	3	2

In examining the mutual career areas having emphasis in both needs and interests there will be found mechanics, agriculture, sec./clerical, carpentry, auto body, construction, electronics and home economics. These career areas could be focused upon in the development/expansion of career programs. Too, most of the health services are in need in Area 16 even though this was not indicated in the need analysis discussed on the previous page.

Again, note that this chapter addresses itself to a District by District analysis and that Chapter I provides a general Area 16 perspective.

CHAPTER III

RESOURCES

Area 16 Resources.

This chapter deals in a general measure with those resources which are characteristic to Area 16. Specifically, the concentration is with manpower resources; however, other resources alluded to involve such economic factors as relates to geography, natural resources, and industrial characteristics. Also projections are made regarding area needs, supplies and demands.

AREA 16 RESOURCES

Section 1.

The following are the responses given by the Area 16 public and non-public school administrators which relates in part to the facilities/personnel resource status. Approximately 84 administrators are involved in the sample.

Entry	Response Yes	Response No
a. The career education concept can be implemented in our district without outside involvement.	54%	46%
b. Would it appear difficult to staff the career areas which are needed in your school?	57%	43%
c. Would it appear difficult to provide facilities to house career programs needed in your area?	63%	37%
d. Would your staff be reluctant to be heavily involved with career education?	13%	87%
e. Would your community welcome career education involvement?	97%	3%
f. Would it appear that the labor force demands in your school community would justify heavy career education emphasis?	69%	31%

The responses given in parts b.and c.would indicate that there is a slight facility and personnel shortage in the career areas of need. The facility shortage would no doubt be frustrated by the Federal government cutback in expenditures toward construction.

Section 2.

This section addresses itself to the highest ranking needs in Area 16 as relating to the immediate employment outlook. The information is obtained from the Occupational Outlook Handbook 1974-75, U.S. Department of Labor.

A. Mechanics: "Employment in maintenance and repair occupations as a whole is expected to increase rapidly through the mid-1980's. In addition to jobs created by employment growth, openings will rise as experienced workers retire, die or transfer to the other fields. Many factors are expected to contribute to the growing need for mechanics and repairmen, including increased demand for household appliances, automobiles, and other items, and repair of complex machinery in industry."[1]

National trends for mechanic needs would reflect a shortage of personnel through the mid-1980's.

B. Health Occupations: "Overall employment in the health field is expected to grow very rapidly through the mid-1980's, although the rates of growth will differ considerably among individual health occupations. Among the factors that are expected to contribute to an increase in the demand for health care are population growth coupled with increasing health consciousness and rising standards of living. Expansion of coverage under payment programs that make it easier for persons to pay for hospitalization and medical care also will cause growth in the health service occupations. Other openings will be created each year by the increasing expenditures by the Federal, State and local governments for health care and services.

1. U.S.Department of Labor Statistics

In addition to jobs created by employment growth many new workers will be needed each year to replace those who retire, die, or leave for other reasons.

Recent expansion of training programs in most of the occupations will add to the supply of trained health service personnel. The employment outlook in the various occupations ranges from excellent to possibly competitive, depending on the balance between supply of workers and expected openings."[1]

C. Secretarial/Clerical: "The growth in numbers of the Secretarial/Clerical fields is expected to result from the increasing paper work that will accompany the expansion of large and complex organizations. Employment opportunities will be best for those in areas whose jobs are not likely to be handled by machines. Particular demands will be in banks, insurance companies, manufacturing firms, government offices and professional service organizations.

Clerical workers who deal with the public who exercise initiative will not be affected by automation."[2]

D. Agriculture: "Typical farm employment will decline in the mid-1980's due to the fact that fewer and fewer farmers are producing more and more of the farm products. However, employment in agri-business related occupations is expected to increase. College graduates in agriculture will also be in demand."[3]

E. Conservation: 1. Forestry - Even though there will be an increase in the demand of foresters, it is quite likely that the college graduates in this area will exceed the demand if current trends continue.[4]

1, 2, 3, 4 - U.S. Department of Labor Statistics

2. Range Managers - Opportunities are expected to increase slowly in the 1980's. However, public concern about the environment could lead to greater opportunities for all types of conservationists. Also, increased demands for meat and other rangeland animal products could produce an increase in the need for more range managers.[1]

3. Soil Conservationists - Employment opportunities for well-trained soil conservationists are good. Opportunities will expand because government agencies, public utility companies, banks, and other organizations are becoming interested in conservation and are adding conservationists to their staffs. Also, newer openings will occur in college teaching, particularly at the undergraduate level.[2]

The foregoing U.S. Department of Labor Statistics observations do not apply specifically to Area 16 but rather are some general employment observations. Section 3 (that which follows) addresses itself to the Area 16 employment picture.

1, 2 - U.S. Department of Labor Statistics

Section 3.

Information regarding Hard-to-Fill job openings and Hard-to-Place job applicants for the Burlington area is obtained from the Iowa Employment Securities Commission, Burlington, Iowa. The information refers only to Des Moines County.

Of particular interest in regard to personnel resources is Table 3-A in which is noted the occupational areas for which there is inferred personnel surplus. The commission contacts includes an estimated 75% of those unemployed. The teacher surplus as indicated substantiates other sources which indicate such a surplus. It would be well to note that many hard-to-place applicants lack desired experience. As of August 31, 1975, there were approximately 3600 applicants registered for work with the Burlington employment office of which 1550 were actively seeking work. These applicants come from Des Moines County as well as neighboring Iowa and Illinois counties.

Some of the noteworthy changes occurring in the characteristics of the unemployed [1] from August 1974 to August 1975 are:

A. The percentage of jobless workers under age 22 has risen substantially. This indicates that permanent jobs are becoming more difficult for the unexperienced to obtain.

B. The increase in the percentage of unemployed males indicates that substantially more of the "family breadwinners" are unemployed. This causes housewives who would not have ordinarily worked to search out employment and assume this role.

C. The percentage of Vietnam Era veterans without jobs increased markedly. This indicates that many of these workers lack the seniority required to enable them to maintain their jobs in these times of mass lay offs.

1. Iowa Employment Securities Commission

TABLE 3-A

OCCUPATIONAL CLASSIFICATION OF HARD-TO-PLACE JOB APPLICANTS

AREA AND STATE Burlington, Iowa MONTH AND YEAR August 1975

Occupational Title	Comments
Teacher	Few Job Openings Available
Secretary	Most Apps. lack Experience
Audit Clerk	Few Job Openings Available
Clerk, General Off.	Excessive Amout of Apps.
Receptionist	Few Job Openings Available
Salesperson, General	Most Apps. Lack Experience
Cashier - Checker	Few Job Openings Available
Kitchen Helper	Few Job Openings Available
Nurse Aid	Most Apps. Lack Qualifications
Automobile Mechanic	Most Applicants Lack Experience
Assembler, Production	Few Job Openings Available
Welder, Arc.	Most Apps. Lack Experience
Carpenter	Few Job Openings Available
Construction Worker	Few Job Openings Available
Tractor-Trailer-Truck Dr.	Most Apps. Lack Experience
Truck Driver, Heavy	Most Apps. Lack Experience
Service Station Att.	Few Job Openings Available
Industrial Truck Oper.	Most Openings Filled by Promotion Within
Material Handler	Most Apps. Have Little Exp. or poor work history

D. The percentage of economically disadvantaged individuals has more than doubled over the past year. This coincides directly with the advanced unemployment ratio witnessed by this area.

Several variables are worthy of mention in regard to the work force personnel resource in Area 16. They are as follows:

1. Population projections for Area 16 would indicate a decline is expected. There is expected to be a decline of 9.4% from 1970 to 1985 that is from 118,774 to 107,614. Since employment is expected to decline 5.2% this indicates that a greater number of people will be engaged in the civilian labor force.
2. Commuting of workers is near saturation. There is not expected to be an increase in the number of commuters in Area 16 because of cost of travel/wage inter-relationships.
3. Because of the increased technology in agriculture, the employment demands will decrease.
4. About one-seventh of the work force will retire in the next ten year period which will require replacement employment.

Over the period 1940-1970, Iowa and Area 16 population increases fall well below the national trends as will be noted by Table 3-B . Also rural and suburban comparisons indicate migration from the former to the latter is taking place in Area 16 from 1960 to 1970 which is a reversal of that which took place at the State level from 1960-1970.[1]

Comparison trends are indicated by Table in which charactistics of the unemployed are provided for 1960 & 1970.

TABLE 3-C

Goals are recognized by industry in Area 16 which are recommended as follows: (the top ten in descending order)[1]

1. Improve housing stock
2. Improve highway access
3. Reduce youth out-migration
4. Protect agricultural land
5. Conserve energy
6. Maintain natural areas
7. Venture capital
8. Up grade air facilities
9. Coordinate industrial commission
10. Develop river transportation

As will be noted all ten goals carry overtures of the need for career education development in Area 16.

Maintenance Man	12	Too Low Pay

CHAPTER IV

A FIVE YEAR PLAN[1]

1. Adapted from "Planning Study to Determine the Career Education Needs for Merged Area V.", Iowa Central Community College, Ft. Dodge, Iowa

FIVE YEAR PLAN FOR IMPLEMENTING CAREER EDUCATION

First Year - Initial Planning

Fall Semester -(1) A close analysis needs to be made of the present curriculum, the career areas now touched upon. Next, the district needs, student needs and interests, district financial potential and staff resources need to be closely analyzed. (2) Staff and public support for career training needs to be obtained by way of an ambitious campaign to inform those who are most clearly related to the endeavor. (3) Finally, and not the least important at the outset, is the provision of support data to convince the District Board of the need for concentration on the career areas as would be evidenced by the data.

Spring Semester -(1) The staff should make a close analysis of the present curriculum as to course objectives in light of career education involvements and/or activities. An abundance of aids, models, etc. are available from the Iowa State Department of Public Instruction. These aids ought to be employed in relating to the local district endeavors to provide a comprehensive career education thrust in the District. (2) An advisory group consisting of lay citizenry having close kinship with career involvements, should be formed (maximum of 15 members) so as to obtain a community perspective on the career needs in the district.

An individual (preferably a staff member) ought to be appointed to coordinate the career efforts of the committee in the District.

(3) Advisory group should seek cooperation with adjacent districts and Southeastern Community College in obtaining means of cooperatively providing career experience in the respective Districts.

Second Year - Implementation

Fall Semester - (1) Initiate the K-3 career education program. Provision for in-service staff training in career education concepts will be essential each semester in the development. Also, general in-service training should be provided for the administration. Efforts should be coordinated by the individual appointed to maintain the entire thrust.

The career activities of the first year need to be evaluated in the Spring to ascertain strengths and weaknesses of the initial thrust on K-3 career programming so as to better prepare for the next phase in the development.

Third Year - Same as in second year for grades 4-7.

Fourth Year - Same as in second year for grades 8-9.

Fifth Year - Same as in second year for grades 10-12.

Extension of the programs developed should be employed to provide for career experiences for the adult sector. Again, the advisory committee would play an essential role in this development. Continual cognizance of district needs should be employed to better recognize the necessary career emphases.

Government	1070	1020	990	+ 50	+ 80
Workers involved in labor-management disputes	130	130	0	(0)	+130

Place of Residence Concept: Method by which an individual, unemployed or employed, is counted in the area where he lives regardless of the area where he works.

Place of Work Concept: Method by which an employed individual is counted in the area where he works regardless of the area where he lives.

1/ Keokuk, Iowa is defined as South Lee County. Data based on a March 1974 benchmark. Detail may not add to total due to rounding.

2/ Includes unemployed and employed individuals. Establishment employment (place of work) data is adjusted for commuting, multiple job-holding, and unpaid absence patterns.

3/ Includes nonagricultural wage and salary; self-employed, unpaid family, and domestic workers; agriculture.

4/ Includes all full and part-time wage and salary workers (excluding domestics) who were employed or involved in a labor-management dispute during the week including the 12th of the month.

5/ Includes nonagricultural self-employed persons, unpaid family workers, and domestic workers in private households.

6/ Revised to most current information available.

Student Interest Component
CENIS Cycle II

The student interest component of CENIS (Career Education Needs Information System) was conducted during the second semester of school year 1974-75, coordinated by the Guidance Services Section, Department of Public Instruction, and accomplished through the cooperation of high school guidance counselors or other designated contact people in both public and private schools in Iowa enrolling eleventh and twelfth grade students.

A statewide total of 6,119 usable survey responses were processed, representing 6.27% of the 97,485 11th and 12th graders in Iowa during 1974-75. Only 64 responses could not be processed. These contained either incomplete data or two choices for the same item. Of the 64 unused responses, 31 indicated plans for full-time employment after high school (combined on 22 responses with further training), while 18 had no plans and 18 respondents could not identify an occupational interest.

Students were asked to indicate occupations in which they planned or could expect to be employed after completing their schooling. A list of 319 occupations was provided to the students representing a cross section of occupations in agriculture and conservation, construction, sales, business and office, food service and lodging, maintenance and repair, manufacturing, media/art/and entertainment, health, scientific, general service, and transportation and related services.

The twenty occupations most often selected as first choice by the students sampled are listed below in rank order:

Projected Number of Students		Projected Number of Students	
3575	Farmer, General	1351	Artist
2820	Registered Professional Nurse	1254	Veterinarian
2729	General Secretary	1217	Factory Worker
2478	Secondary School Teacher	1159	Carpenter
2130	Automobile Garage Mechanic	1150	Professional Musician/ Singer
1850	Elementary School Teacher	1142	Community or Social Service Worker
1514	Certified Public Accountant	1129	Construction Worker
1447	Lawyer/Attorney or Judge	1062	Bookkeeper
1446	Medical Doctor/Physician/ Surgeon	1051	Cosmetologist/Beautician
1436	Receptionist	982	Conservation Officer

Based on the sample surveyed, indications are that 34.3% of Iowa 11th and 12th grade students plan to attend a four-year college or university, 29.2% plan full-time employment, 15.9% plan to attend a community college or area school, 10% plan to attend a private trade, technical or business school, 4.5% plan to enter military service, and 2.6% plan to attend a private junior college.

TABLE 1. Future Plans of 11th and 12th Grade Students FY 1975

Table 1 presents data for each merged area as to plans for the first year after high school by percent of respondents and projected number of 11th and 12th grade students. In addition, a statewide projected total and percent are given for plans the first year after high school.

Merged Area	Employment	Pct.	Military Service	Pct.	Community College/ Area School	Pct.	Private Trade/ Technical/ Business School	Pct.	Private Junior College	Pct.	Four-Year College/ University	Pct.	None of the Above	Pct.

	Farmers (Composite of Comments from Farm Operators throughout Iowa)	Statewide	"A course dealing with mechanics of machinery should be given so that costly breakdowns could be avoided."

LAKES AREA HOME CARE SERVICE
1307 Palmer
Emmetsburg, Iowa 50536
PH: (712) 852-4156

The Homemaker Health Aide may do these things:

Light housekeeping
Plan and prepare meals
Shopping and purposeful errands
Light laundry
Mending and household management
Care of Children - if mother is ill absent
Assist with personal care, such as bathing, shampoos, mild exercise, ambulation
Encourage and teach the infirmed and disabled in self help.

HOURS AVAILABLE

This service is available Monday through Friday, from one to eight hours daily. Each situation is individually considered and seryed. There is no weekend or holiday service except in some emergencies if there is a homemaker health aide available.

REQUESTS

Requests for service may be made by physicians, nurses, social and health agencies or individuals.

The service is paid for by the recipient of the service, and is paid to the agency. No money is exchanged between the family and the aide. In the event that the family is unable to pay, third party payment can sometimes be arranged.

Requests for this service or further information regarding it may be secured from:

BUENA VISTA COUNTY

732-1388 - Public Health Nursing Service Storm Lake
732-5409 - Social Services, Storm Lake

852-4803 - Home Health Aide Director, Emmetsburg

Lakes Area Home Care Service is a non-profit voluntary agency designed to place trained, responsible women workers in homes where illness, disability or other crises threaten normal family living. These Homemaker Home Health Aides are assigned according to their ability to meet the needs of each individual family.

Employer Comments Extracted from CENIS Cycle II Labor Demand Survey

Area	Employer's Name	Address (City)	Comment
IV	Harry's Auto Repair	Sandborn, Iowa	"Teachers at the technical school should have on-the-job training before they teach students"
	Farmers (Composite of Comments from Farm Operators throughout Iowa)	Statewide	"A course dealing with mechanics of machinery should be given so that costly breakdowns could be avoided."

Employer Comments Extracted from CENIS Cycle II Labor Demand Survey

Area	Employer's Name	Address (City)	Comment
V	M & M Livestock Production Company	Eagle Grove, Iowa	"This company has 40 men on the road as field salesmen who are not salaried but on a straight commission. The 10 listed for the survey are on the payroll--straight salary. Has openings for any who will work on straight commission."
	Umthrun Trucking Company	Eagle Grove, Iowa	"Area V and XV schools do a real good job of training people. They have been good suppliers."
	Farmers (Composite of Comments from Farm Operators throughout Iowa)	Statewide	"A course dealing with mechanics of machinery should be given so that costly breakdowns could be avoided."
	Edna Rodenborn	Webster City, Iowa	"She is on Advisory Board of Area School--thought current graduates from area schools were far below expectations of qualified employee material. Number 1 reason: These schools must accept all applicants, good, bad, etc.--cannot be screened or refused entrance."
	Woodke Enterprise	Schaller, Iowa	(Manufactures grain trailers, transports, and ambulances). "This company is expanding rapidly and expects an increase in next few years. Representatives have just returned from

Area	Employer's Name	Address (City)	Comment
V (Cont.)	Woodke Enterprise	Schaller, Iowa	Russia and two other countries. Looks promising! Plan to put on trainees the last of '75."
	Van Diest Supply Company	Webster City, Iowa	"Respondent first had me put 18 people here (Farm and Garden Equipment and Supplies Sales), then changed his mind. Decided it was degree-type job. He hires men away from Dow, Monsanto, etc. He said the last man he hired on this job has a Masters and that he wouldn't hire anyone with only two years college."

Employer Comments Extracted from CENIS Cycle II Labor Demand Survey

Area	Employer's Name	Address (City)	Comment
VI	Fisher Controls Co., Inc. Bob Lahr, Employer Supervisor (firm refused to participate in survey)	Marshalltown, Iowa	"This survey does not apply to us and we would rather not do it. All vacancies are filled from within plant on bid basis and any new employees start at bottom, except draftsmen and electronic technicians, which are supplied by the area school. I meet with the school people at least twice a year on this. Also, a large part of our force is degree engineers which would not fit the survey."
	Kenn's Auto Service	Marshalltown, Iowa	"A special need for training mechanics on automatic transmission repair."
	Western Manufacturing Corporation	Marshalltown, Iowa	"Said he has tried area college kids and they don't work out. They want to teach instead of actually doing the labor."
	Farmers (composite of comments from farm operators throughout Iowa)	Statewide	"A course dealing with mechanics of machinery should be given so that costly breakdowns could be avoided."

Employer Comments Extracted from CENIS Cycle II Labor Demand Survey

Area	Employer's Name	Address (City)	Comment
VII	John Deere	Waterloo, Iowa	"We have an overabundance of welders. We must have 500 qualified welders doing other jobs, so the schools must be turning out too many of them."
	Carthel, Inc.	Waterloo, Iowa	"This firm should be listed as 'Ben Franklin Stores of Waterloo', Ridgeway at Kimball. No listing for Carthel anywhere and address given is home of the owner."
	Larry and Laverne Lampe Masonry	Sumner, Iowa	"We have hired men from the area colleges and let me tell you, they don't learn a thing."
	United Packing House Workers of America, Local 46	Waterloo, Iowa	"One of our employees is black. Aren't you interested in that? Must be a slanted survey!"
	Farmers (composite of comments from farm operators throughout Iowa)	Statewide	"A course dealing with mechanics of machinery should be given so that costly breakdowns could be avoided."

Employer Comments Extracted from CENIS II Labor Demand Survey

Area	Employer's Name	Address (City)	Comment
IX	Chemplex Company	Clinton, Iowa	"Hard to find pressure pipe welders. (ASME code welders)."
	Keene Wood Products Reid W. Keene, Owner	Lamotte, Iowa	"We are expanding now and intend to expand again by 1978. When we get around 100 people, we could use some people with supervisory training if there could be such a four week course or so at a voc-tech school."
	Midwest Publishing Company	Davenport, Iowa	"I would never hire anyone from a community college, so any information would have no bearing or interest. Any expansion would be through part-time only. Highly technical--you wouldn't understand it. Mostly graphic arts. Community colleges don't understand or offer courses of any conceivable value to me."
	Crescent Baking Company--Division of Formel Baking Company	Davenport, Iowa	"Perhaps we will have more automation by 1980. As salaries go up, employment, dollarwise, has to come down and depend more on automation."
	Merchant's Transfer and Storage	Davenport, Iowa	"Requires six months training to acquaint themselves with Federal regulations."

Area	Employer's Name	Address (City)	Comment
IX (Cont.)	Peterson Paper Company	Davenport, Iowa	"Respondent very uncooperative in beginning. Felt lists are sold and inquired how he would be repaid for time lost answering questions."
	Employer not identified	Clinton, Iowa	"Wish there were a food marketing course at Clinton Community College."
	Farmers (composite of comments from farm operators throughout Iowa)	Statewide	"A course dealing with mechanics of machinery should be given so that costly breakdowns could be avoided."
	Russellroy Foundry Co.	Durant, Iowa	"Davenport school system had a foundry training program that has been dropped...due to lack of enrollment. Only other nearby training is in Chicago area. Molder and coremaker training would be helpful.

Employer Comments Extracted from CENIS II Labor Demand Survey

Area	Employer's Name	Address (City)	Comment
X	Amana Refrigeration, Inc.	Amana, Iowa	"Refrigeration and air conditioning mechanic training badly needed and not offered in this area. Three plants in Area 10 vicinity might use people so trained. Currently, workers obtained from Omaha. Executive positions could not be trained in area schools, but are filled from within, e.g., all buyers up to the vice-president, came out of factory. Send us motivated people willing to work."
	Iowa Pipe and Supply Company	Cedar Rapids, Iowa	"There is a need for training of wholesale salespersons, in related areas, i.e., plumbing, electrical, lumber, etc. We usually train our own people from the warehouse up--any that show initiative, knowledge and ambition."
	Nelson Furniture Company	Vinton, Iowa	"My truck drivers are very good public relations people and I feel public relations courses are most important."
	The Quaker Oats Company	Cedar Rapids, Iowa	"Would like to see women/minorities in crafts jobs if serious and interested. If background in machine shop

Area	Employer's Name	Address (City)	Comment
X (Cont.)			courses, Quaker would train and bring up through craftsman process."
	Farmers (composite of comments from farm operators throughout Iowa)	Statewide	"A course dealing with mechanics of machinery should be given so that costly breakdowns could be avoided."

Employer Comments Extracted from CENIS II Labor Demand Survey

Area	Employer's Name	Address (City)	Comment
XI	Americana Nursing Center	Des Moines, Iowa	"A new law has been passed requiring RNs on duty around the clock instead of just LPNs. There is no way to estimate employment figures because it depends on when the ruling goes into effect and if they make any new stipulations."
	Capital City State Bank	Des Moines, Iowa	"Stenographer position hard to fill because of applicant's lack of shorthand."
	Fawn Engineering Corporation	Des Moines, Iowa	"We are laying people off because business is down. We had 300+ in 1973--90+ next week."
	Federal Reserve Bank of Chicago	Des Moines, Iowa	"There are no present employ--ees in these positions (system analyst, statistical clerks and stenographers) or current vacancies, but there may be need for them in the future ('76-'80)...depending on the check volume to be handled here at the Des Moines office."
	F.W. Means and Company	Des Moines, Iowa	"Industrial maintenance mechanic must have a second class engineer's license in the state of Iowa--maintains machinery--needs welding and electrical experience."

Area	Employer's Name	Address (City)	Comment
XI (Cont.)	Homesteader's Life Company	Des Moines, Iowa	"Out of 80 employees, I estimate that five years from now 10 will be remaining. The 70 that will be replaced will be distributed among the clerical positions and one-third of the supervisory positions."
	International Livestock Improvement Service	Ames, Iowa	"This firm sells a machine which provides a service for hog producers--a pregnancy testing procedure. For Field Technicians, four years of college not required, but normally hire people with four year animal science degree and some knowledge of electronics. Considered very skilled."
	Herman Kucharo	Des Moines, Iowa	"This (tailor) is a very difficult job to fill. At one time, three years ago, I went to five cities trying to find a replacement for a tailoring position."
	Newton Foundry	Newton, Iowa	"Foundry molder.. a lost art type of job. At one time, we had twelve in this position, but have recently installed a machine that takes the place of three men--mostly due to problem of keeping men on this job. They are an independent, hard, hard

Area	Employer's Name	Address (City)	Comment
XI (Cont.)			working (and drinking) type person and the turnover is tremendous. They get their pay and forget to come to work because they can go anyplace and get a job!"
	Michael's Restaurant	Des Moines, Iowa	"I wish someone would train a chef. I would gladly hire cook helpers with some training."
	Parker Brothers	Des Moines, Iowa	"Estimated employment increased based on proposed addition to the plant. If addition doesn't come about, increases won't be added."
	Refrigeration, Inc. Percival Manufacturing Company 1805 East 4th Street Boone, Iowa 50036	Boone, Iowa	"Mr. Steve Radnish (General Manager) would like a report of results of this survey, if possible.
	Rolscreen Company	Pella, Iowa	"We promote from within and any formalized training is handled by either the Des Moines area school or at Ames during winter months when business is slack."
	Employer not identified		"Major companies will supply information and equipment to train motor and marine mechanics. Check with service department at Mercury, Marine, Fon du Lac, Wisconsin."

TITLE: RESEARCH PROJECT ON CAREER EDUCATION IN MERGED AREA III.

DESCRIPTOR: *CAREER EDUCATION; *EDUCATIONAL NEEDS; *VOCATIONAL INTERESTS; CAREER AWARENESS; ATTITUDES; *SCHOOL SURVEYS; EDUCATIONAL ASSESSMENT; RELEVANCE (EDUCATION); ELEMENTARY SECONDARY EDUCATION; STATISTICAL DATA; *NEEDS ASSESSMENT

IDENTIFIER: IOWA MERGED AREA III

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 203P.

ABSTRACT: THE REPORT DESCRIBES A RESEARCH PROJECT TO DETERMINE THE CAREER DEVELOPMENT NEEDS OF STUDENTS IN IOWA MERGED AREA III AND THE AVAILABLE AREA RESOURCES TO HELP MEET THOSE NEEDS. THE CAREER DEVELOPMENT NEEDS ASSESSMENT INCLUDED A SURVEY OF SENIOR HIGH SCHOOL STUDENTS, TEACHERS, ADMINISTRATORS, AND PARENTS IN 24 SCHOOL DISTRICTS TO MEASURE ATTITUDES TOWARD CAREER EDUCATION AND EMPLOYABILITY SKILLS; A PROFILE OF NATIONAL ATTITUDES FROM A GALLUP POLL; AND AN ASSESSMENT OF PROGRAMS AT IOWA LAKES COMMUNITY COLLEGE. RESOURCES IN AREA III WERE REPRESENTED BY DATA COMPILED BY THE IOWA STATE DEPARTMENT OF PUBLIC INSTRUCTION FOR POPULATION CHARACTERISTICS, SCHOOL CURRICULUMS AND FINANCES, STUDENT OCCUPATIONAL INTERESTS, LABOR MARKET AND DEMAND, AND STUDENT ENROLLMENT PROJECTIONS. THE DATA AND SURVEY RESULTS ARE DETAILED IN NARRATIVE AND TABULAR FORM. SUGGESTED APPLICATIONS OF THE STUDY INFORMATION INCLUDE CONSIDERATIONS OF CAREER EDUCATION CURRICULUMS FOR RELEVANCE, IN VIEW OF THE FACT THAT A LARGE MAJORITY OF SURVEY RESPONDENTS FAVORED SPECIAL VOCATIONAL TRAINING COURSES AND WORK-EXPERIENCE PROGRAMS AS ALTERNATIVES TO QUITTING SCHOOL. THE SURVEY FORMS ARE APPENDED. (MF)

I. Foreward

The need for a career development research project for Area III was expressed by the Area III Superintendents Consortium in the Spring of 1974. Through the cooperation of the Area III Superintendents and Iowa Lakes Community College, a grant was obtained from the Iowa State Department of Public Instruction to research Area III needs and available resources.

Acknowledgment is given to the Area III secondary school students and staffs for their cooperation. Appreciation is also expressed to Area III Career Development Advisory Committee.

Acknowledgment for assistance in the project is also given to Dr. Ken Wold and Mr. George Lowrey of the Iowa Department of Public Instruction; the Iowa Lakes Community College Computer Center; the Iowa Lakes Community College Machines Center; and the secretarial staff at both of the Iowa Lakes Community College attendance centers.

A special thank you is expressed to Mr. Louis Hansen of the Iowa State Extension Service for his considerable help in research and data processing methods.

This document is intended to provide educators with a sound basis for future program planning and curriculum enrichment.

James D. Van Eldik

David L. Nelson

II. Introduction

Purposes

The purpose of this research project is to determine the career development needs of all students Kindergarten through grade fourteen in Merged Area III, and the available resources in this area to help meet these needs. A specific plan for career education is not included since sufficient guidelines already exist in the "Models for Career Education in Iowa" series; the document "Career Development - Philosophy Goals, and Plans for the Public and Private Educational Units of Merged Area III" endorsed by each of the local educational agencies in Merged Area III; and in "A Comprehensive Plan for Career Development - Group I, and "A Comprehensive Plan for Career Development - Group II", two projects providing funding for career education at the secondary level for eighteen Area III local educational agencies. The methodology for providing career education is abundant within the above documents. The need lies with the identification of specific strengths and weaknesses within our current efforts, and for a realignment of educational planning in accordance with the realities of student aspirations, population characteristics, and employment profiles of this geographic area.

Career Education

This project endorses the definition of career education developed by the Iowa Model for Career Development. That definition is:

Career Education is the sequence of career development experiences, beginning in early childhood and continuing

through adult life, that prepares individuals for present and future career opportunities. These experiences are offered through various programs, services, and activities which are designed and implemented to assist youth and adults to develop occupational competencies and attitudes which facilitate employment and/or advancement in an occupation and which will result in meaningful career development.

Procedures

1. Curriculum Survey. In order to measure the various components of the career development process, sixteen questions were selected to measure appreciation and attitudes, self-awareness, decision making skill, educational awareness, career awareness, skill awareness, beginning competency, and employability skills.

   A five point scale was developed ranging from "little help" to "a great help" provided by the school's educational program.

   This survey was administered to 10th, 11th, and 12th grade students, teachers, administrators, and a sampling of parents in twenty-four of our twenty-eight school districts.

   Other components of this survey can be found in Chapter III.

2. National Attitudes: A profile on the nations' attitude toward career education was provided through a Gallup Poll survey.

ıent of the Quality and Effectiveness of
ction at Iowa Lakes Community College. The
Lakes Community College 1975 Self Study"
led an assessment of Area III community college
ams.

ation Characteristics and Trends. Current data on population within our five county area was provided by a number of agencies including the Northwest Iowa Area Extension Office, Bureau of Vital Statistics, Upper Des Moines Agency, Department of Health, and others.

5. Area II Employment. Current data on Area III employment was provided by the Northwest Iowa Area Extension Office.
6. Public School Financial Data. Current figures on public school financial data were provided by the Iowa Department of Public Instruction.
7. Public School Curriculum Analysis. Basic information on local school curricula was also provided by the Iowa Department of Public Instruction.
8. Student Occupational Interest. This data was acquired from the CENIS Student Interest Survey and our own curriculum survey.
9. Student Follow-up. Follow-up data on graduates and dropouts was provided by the Guidance Services Branch of the Iowa Department of Public Instruction. Separate data on former Iowa Lakes Community College students can be found in Chapter III.
10. Labor Demand. Primary source for this data was the CENIS Labor Demand Survey.

11. Educational Characteristics. Educational characteristics of the population of Area III was gathered from the 1970 census.

12. School Enrollment Projections. Projected enrollments through fiscal 1979 were provided by the Iowa Department of Public Instruction.

13. ILCC Curriculum Vitae. The summary of resources available at Iowa Lakes Community College was taken from the "Iowa Lakes Community College 1975 Self-Study."

14. 1975 Wage and Employment Practice Survey. This information on the specific occupations currently employed by area industry was gathered through the joint efforts of Iowa Lakes Community College and Mr. Quay - Perfex Inc., of Spirit Lake.

CURRICULUM SURVEY

Career education has been given various interpretations and definitions. When surveying the curricula of the Area III schools, it was apparent that career education to some administrators meant vocational education; to others it was a nebulous term that had something to do with those persons not intending to enroll in college; and to some, career education meant activities having to do with selection of and preparation for a person's life work

In this study, career education is defined as those experiences which foster self-awareness, exploration, and preparation for occupational roles in society. The extent to which these career education components are being integrated into the curricula of Area III schools was measured by a sixteen statement opinionnaire administered to all ten[illegible] eleventh, and twelfth graders as well as to the administrators and teachers in these schools. Similar questions were also given to the parents of all eleventh graders who participated in this survey.

The sixteen statements represent various elements of career education as they related to awareness, exploration, and preparation activities. The elements used in this study to measure career education have been developed from statements from the National Standard Career Education Model---Kindergarten through Adult and are listed below with the statements referring to those elements:

Appreciations and Attitudes

1. My school has activities that help me find out what work and jobs mean.

11. My school has activities that teach me to appreciate the dignity and value of work.

Self-Awareness

2. My school helps me see my strengths and my interests when I am thinking about choosing a job.

8. My school has activities that help me develop a positive concept of myself.

Decision Making

3. My school has activities that help me to choose a group of jobs to study.

5. My school helps me plan what courses and activities I should take in school and beyond to be prepared to do the job for which I am planning.

Educational Awareness

4. My school helps me to recognize and understand those things in my life that are important to me.

9. My school helps me see that a person's standard of living depends on the kind of job he has as a wage earner.

Career Awareness

6. My school helps me see the special skills needed by people who work in various jobs.

7. My school helps me discover my interests, my abilities, and my feelings that relate to a group of jobs in which I think I might like to work.

10. My school helps me learn the relationship between an occupation and leisure time.

Skill Awareness

13. My school helps me match my interests and abilities with the skills that are needed in groups of jobs.

Beginning Competency

12. My school provides experiences for me to use tools and equipment that

are used in various groups of jobs.

16. My school helps me get the skills that are basic to a single job for which I am planning.

Employability Skills

14. My school helps me to see that "how I act and what I am" may fit one kind of job more than another kind of job.

15. My school has activities showing why certain types of jobs require more education and training than other kinds of jobs.

The purpose of surveying the three grade levels with the same opinionnaire is to determine at what grade level the students are receiving information regarding the various components of career education.

A Five-Point attitude scale was used to measure the reaction to each of the sixteen statements in the opinionnaire. The scale ranged from no help, very little help, some help, much help, to a great help.

Other questions on the survey were designed to measure reactions to the difficult problem of lack of interest in school work as now offered in junior and senior high school with the often associated discipline and lacking motivation problem, the extent of career information given to students in various classes, where students obtained information about jobs they are considering as careers, what activities students are involved in that allow them to investigate jobs, expected mobility, student knowledge of changing job markets, how many jobs require baccalaureate degree preparation, courses needed for vocational-technical training, and future plans. This information is summarized in following tables.

The same sixteen questions were used in surveying teachers (K-12), administrators (superintendents, principals, counselors), and parents of all eleventh graders participating, to compare what the students perceived the schools were doing in terms of career education concepts, what the

students perceived the schools were doing in terms of career education concepts, what the administrators perceived the school was offering to students in career education, what the teachers perceived their courses were offering to students in terms of career education, and what the parents of eleventh graders felt the schools should be offering to students in terms of career education. Questionnaires were received from 187 parents, 79 administrators, 611 teachers, 1,212 tenth graders, 1,129 eleventh graders, and 921 twelfth graders.

GROUP RESPONSES TO QUESTIONNAIRE

Taking the weighted mean of the scores on the first sixteen questions we find that Administrators scored 3.18; Parents scored 3.06; and Students and Teachers scored 3.03 and 2.83 respectively. (See Table II, page comparing the reactions of the four groups.)

Some comparisons between the four groups can be made by looking at the information presented in Table II.

Statement number twelve on "school provides experiences for using tools and equipment used in various groups of jobs" was ranked one by parents and students. Administrators ranked this thirteen and teachers ranked it fourteen.

Statement number four on "school helps me to recognize and understand those things in my life that are important to me" was ranked two by both administrators and teachers. Parents ranked this seven and students ranked it ten.

Students and parents ranked statement number fifteen on "my school has activities showing why certain types of jobs require more education and training than other kinds of jobs" two and three respectively; administrators ranked that statement five and teachers ranked it eight.

Statement number five on "helps me plan what courses and activities I should take in school and beyond to be prepared to do the job for which I am planning" was ranked four by students, but was ranked one, two, and twelve by administrators, parents, and teachers.

Students and parents ranked statement number eight on developing a positive concept of self five, while teachers ranked this one and administrators ranked it four.

Statement number one "my school has activities that help me find out what work and jobs mean" was ranked six by administrators; teachers, on

the other hand, ranked it four, while students and parents ranked it thirteen and fifteen respectively.

Statement number seven on help in relating interests, abilities, and feelings to a group of jobs was ranked seven, eight, and nine by teachers, administrators, and parents. Students ranked this statement eleven.

Teachers ranked statement number fourteeen on "my school helps me to see that "how I act and what I am" may fit one kind of job more than another kind of job" eight, while students ranked it eleven. Both parents and administrators ranked it fourteen.

Statement number ten the relationship between an occupation and leisure time was ranked nine, ten, twelve, and thirteen by students, teachers, administrators, and parents.

Statement number two on importance of awareness of one's strengths and weaknesses when choosing a job was ranked ten by parents, while administrators ranked it three. Teachers ranked this statement six and students ranked it sixteen.

Statement number six on "my school helps me see the special skills needed by people who work in various jobs" was ranked eleven by parents, five by teachers, seven by administrators, and eight by students.

Administrators ranked statement number eleven on teaching appreciation of the dignity and value of work eleven. Teachers ranked this three, while parents and students ranked it four and seven.

Statement number nine concerning a person's standard of living depending on the kind of job he has as a wage earner was ranked two by students, six by parents, eight by administrators, and eleven by teachers.

Students ranked statement number thirteen on "my school helped me match my interests and abilities with the skills that are needed in groups of jobs" fourteen. Administrators ranked it fifteen while teachers and parents ranked it thirteen and eleven respectively.

Statement number three on choosing a group of jobs to study was ranked fifteen by both teachers and students while parents ranked it sixteen and administrators ten.

Administrators and teachers both ranked statement number sixteen "my school helps me get the skills that are basic to a single job for which I am planning" sixteen. Students ranked it five and parents ranked it seven.

The score of administrators (superintendents, principals, and counselors), 3.18 seems to indicate that "some help" is being given to students regarding career education within the curriculum. The administrators seem to feel that more is being accomplished or that more is desired to be accomplished in career education than what parents (3.06) or students (3.03) see. Teachers (2.83) perceive career education in their schools most differently from administrators.

The questionnaire can also be analyzed in terms of awareness, exploratory and preparatory activities. Statements number 1, 2, 4, 8, 9, 10, and 11 measured the degree of awareness activities present in the curricula. Statements numbered 3, 5, 6, 7, 13, 14, and 15 measured exploratory activities in the curricula. Statements number 12 and 16 measured preparatory activities in the curricula.

Administrators, Teachers, Parents, and Students were also asked to indicate their feelings concerning ways of dealing with students who are uninterested in school work. The following statement was presented to each of the four groups: "Some students have no interest in school work as now offered in junior and senior high school and they become a problem. Here are some ways that have been proposed for dealing with these students. Will you indicate in the case of each proposal whether or not you approve of it?"

The first choice was "permit these students to quit school?" Parents felt most strongly that students should not be allowed to quit school (74%), while Administrators were the least opposed to students quitting (49%). Fifty-seven percent of the teachers were against permitting students to quit while

fifty percent of the students indicated the same.

Taking the other side of this picture, forty-one percent of the administrators, eighteen percent of the parents, twenty-six percent of the teachers, and twenty-nine percent of the students indicated that they would favor permitting students uninterested in school work as now offered in junior and senior high school to quit school.

Five other alternatives to quitting school were offered as choices to meet the problem of lack of interest by some students. Each of these alternatives received a majority of yes or positive responses from all four of the responding groups. The alternative receiving the largest percentage of favorable responses from students was "special training courses" (89.2%) with the alternative "work-study" (87.1%) a close second. Teachers ranked the alternative "work-study" (91.3%) highest with "special training courses" (90.5%) a close second. Administrators also chose "work-study (93.7%) as the most favorable alternative but "special training courses" (91.1%) was also their second choice. Parents, like students, indicated that "special training courses" (88.6%) was their first choice with "work-study" (88.2%) a close second choice.

Table III shows the breakdown of response from students, teachers, administrators, and parents, both in percentage and total number of responses, to the six alternatives offered to the problem of lack of interest by some junior and senior students in school work.

TEACHERS SURVEY

There were six hundred and eleven teachers (elementary & secondary) who responded to this questionnaire. The teachers were asked to respond to the statement: "The career education concept is being implemented in my classes" with one of three responses. Forty-eight percent responded "agree"; thirty-two percent responded "disagree"; nineteen percent responded "don't know".

Of the six hundred and eleven teachers who responded to the questionnaire, two hundred & seventy four indicated that they taught in Kindergarten through sixth grade; two hundred & six did teaching with seventh graders; two hundred and seven had classes with eighth graders; one hundred and eighty-six taught nineth graders; one hundred and sixty-seven worked with tenth grade; one hundred and fifty-six did teaching in the eleventh grade; and one hundred and six taught twelfth graders.

Forty-seven percent of the teachers surveyed were presently doing teaching in the areas of mathematics and science. Thirty-one percent were teaching in the areas of English, fine arts, and foreign language. Six percent were teaching physical education. Sixteen percent of the teachers were involved with practical arts (Aq., Bus., DE, Home Ec., Ind. Ed., Voc., Coop.).

The teachers were asked to check how many years of educational work-experience in elementary and secondary school they had. Two hundred & fifteen (36.2%) checked the "1-5 yrs." category; one hundred & nineteen (20%) checked "6-10 yrs." one hundred and seventy-nine (30.1%) checked "11-20 yrs."; fifty-four (9.1%) checked "21-30 yrs."; and twenty seven (4.5%) checked "over thirty years". Seventeen did not respond.

The teachers were asked to indicate how many years of full-time non-educational work-experience they have had. Two hundred and thirty-nine (41.1%) marked the "0-1years" category; two hundred twenty-eight (39.2%) checked "1-5 years"; seventy-one (12.2%) marked "6-10 years", twenty (3.4%) checked "11-20 years"; and twenty-two (3.8%) marked over twenty years". Twenty-nine did not respond.

The teachers were asked to indicate which sources they had received information about the career education concept. They could check as many of the seven choices as applied. Three hundred & thirty-eight (25.4%) marked "journals"; two hundred & three (15.2%) checked "films"; three hundred eighty-two (28.7%) marked "in-service sessions"; sixty-nine (5.0%) checked "seminars"; one hundred forty-one (10.6%) marked college courses"; one hundred thirty-four (10.1%) checked "books"; sixty-five (4.9%) marked research reports".

The question was asked each of the teachers, "Do you feel that counselors provide necessary services and feedback to you concerning students' needs?"

Teachers were evenly split on this question, two hundred eleven (37.0%) agreed; two hundred twelve (37.2%) disagreed and one hundred forty-six (25.6%) did not know.

The teachers were asked, "Does the school have a definite plan for placing students in learning activities within the school and community in accordance with individual abilities, interests, and needs?" A large portion of the teachers were uncertain of this with one hundred seventy-two (30.0%) saying yes; one hundred sixty-one (28.1%) saying no, and two hundred thirty-nine (41.7%) saying they did not know.

The teachers were questioned, "Do you use information available through the guidance services to learn more about the pupils in your classes?" Results indicated significant usage with three hundred forty-three (63.9%) indicating yes, and one hundred ninety-three (35.9%) indicating no.

Teachers were also surveyed as to career development classroom activities and materials currently in use. The five most popular were bulletin boards (17%), audio-video presentations (16%), books and newspapers (16%), field trips (14%), and guest speakers (11%).

ADMINISTRATORS SURVEY

There were seventy-nine administrators (superintendents, principals, counselors) who responded to this questionnaire.

The school administrators were asked, "Can the career education concept be implemented in your school district without additional funding?" Eleven (13.9) agreed that it could be implemented without additional funding. Forty-four (55.7%) felt that implementing the career education concept could not be done without additional funding. Twenty-four (30.4%) marked "don't know."

To the question "Is the career education concept being implemented in your local school district?" Fifty-two (67.5%) of the administrators indicated that it was being done. Fifteen (19.5%) checked that it was not being implemented. Ten (13.0%) didn't know.

Question 26 lists written responses by school district on specific activities being utilized to implement career development. Question 27 lists written responses as to obstacles blocking implementation efforts.

To the question, "I have received career education information from", the two primary sources of information were in-service sessions and journals.

Slightly less than half of the administrators surveyed indicated one or more days of career education in-service for teachers.

Approximately 75% of the surveys indicated that additional in-service days are available to teachers on an individual basis.

Question 36 dealt with classroom space and will be covered in the resources section of the study.

AREA III ADMINISTRATORS RESPONSES TO QUESTIONNAIRE - QUESTIONS 18-35

	Agree	%	Disagree	%	Don't Know	%
18. The career education concept helps students in all grade levels and all subjects.	52	66	10	13	17	21
19. The career education concept helps students who are preparing for job entry or vocational-technical education immediately after graduation.	61	77	7	9	11	14
20. The career education concept helps students who are preparing to enter a four-year college or university.	65	82	5	6	9	11
21. The career education concept is useful as a tool to motivate student learning.	63	80	3	4	9	11
22. The career education concept can be implemented in my school district without outside help.	15	20	46	58	17	22
23. Initiation of the career education concept will cause unusual changes in the school curriculum.	19	24	45	58	14	18
24. The career education concept can be implemented in my school district without additional funding.	11	14	44	56	24	30
25. The career education concept is being implemented in my local school district.	52	68	15	20	10	13

26. If the answer to question number 25 is "Agree" write a brief explanation below of your career education program:

School District	Response
South Clay	Within regular cirriculum areas
Spencer Community Schools	Elementary needs co-ordination
Harris - Lake Park	Teacher at all grade levels have made attempts to inform students of occupations and the dignity of all work
Harris - Lake Park	Introduction of classes. Nurses Aid - Career math class Purchasing of career Ed related equipment. DPI Grant

RESPONSES TO NUMBER 26 (cont)

School District	Response
Graettinger Community	Various vocational and exploritory courses are available. Areas outside of academic courses are strongly emphasized. Program does not go far enough. We are limited as to what we would like to offer and what we can.
Graettinger	Career Advisory Committee, Elementary Career Education Workshop on "Awareness" ideas - planning guideline for teachers. Mini-Career and College Day Programs provided juniors & seniors.
Milford Community School	Career units in Social Studies and English. Work-study, and work observation programs.
Milford Community	Vocational Programs in Careers, On-the-Job training, Teachers use subject matter areas in comparison with job skills.
Clay Central Community	Just beginning. We have career days in the Elementary Grades. Study various careers and what the careers involve.
Arnolds Park Cons. School	Our guidance counselor is supervising this area in cooperation of the staff. This is being done through group as well as in individual guidance. This question may be answered better by our guidance director.
No school listed	To some degree - working with ILCC on program. Youngsters are permitted to leave school during "no class" periods to work at jobs.
Mallard Community	We have purchased some materials - teachers have been encouraged to begin writing a course of study. An attempt is being made to present material and information regarding career education. However, I wouldn't say it is fully implemented.
Algona	Awareness at Jr. High level, Self-awareness at 9-11 level, Career awareness at senior level.
Titonka	Following a In-service meeting devoted to career education two years ago our teachers have individually planned and implemented career development activities in their class rooms. We are now in the process of organizing our teacher's efforts into a program. We plan on using this assessment plus our own community assessment to determine our present needs so we can establish goals as a group and then plan a coordinated program of career development activities to meet our goals. We hope to implement a program later this spring. We feel this will be an improvement over the present where teachers are individually implementing career ed. activities.

RESPONSES TO NUMBER 26 (cont)

School District	Response
Arnolds Park Cons.	Grades 10, 11, 12 - Career exploration units taught by student handbook, student activity booklet, films, trips, speakers. Covers values, attitudes, goals, interests, abilities, the world of work, psychology of work, occupational clusters, future occupational trends, educational avenues, getting the 1st job.
Emmetsburg	Jr. High - group work on values, job exploration, guest speakers, group work on work ethics and attitudes, etc.
Milford Community	In the elementary program career education is integrated along with the regular course of study.
Milford	1. Career Units in sophmore and junior years. 2. Some in regular classes.
Harris Lake Park	All levels have been made aware of the concept and all levels do make some provision. At the jr. High level a course in orientation takes them through clusters and self appraisal. Also, a teacher advisor system is in operation. At the high school level, English courses have been recognized, Career math added, work study, Voc Ag. Shop as well as home economics and business courses lead themselves to vocational Ed. In addition, this semester we are offering nurses aid. Finally the senior year is made more flexible so that students can secure jobs on their own.
Estherville	Career Ed. information in student course offering handbook. Posters illustrating course - careers coordination. New career information for teachers in the rooms (kits). Resource people coming in for small groups at sophmore level.
Estherville Comm. School	We have a work-study program for seniors. We have a mini-grant for Juniors dealing with career education. We have a few cases of work release for underclassmen. We have had resource people in on various occupations and have made field trips.
Estherville	Career information program through home rooms 9, 10, and 11. Career information oriented student handbook. A well developed elective program in trade & industry-office Ed. & DE.
Titonka	We have done some in-service to acquaint staff with concept. Steering Comm functions in our school to coordinate activities. Self awareness activities and acquaintance with world of work are carried out at elementary level. Plans are being formulated in high school for work study experiences.

RESPONSES TO NUMBER 26 (cont)

School District	Response
Terril	One semester courses in 10th and 12th grade, provision for work experience with credit, integration into K-12 program of concepts of career ed. Setting up outside courses on a contractual basis.
South Clay	Films - interviews
Terril Comm. School	Classes offered to two high school grades. Some awareness in elementary. Plans to implement work study.
Spencer Community	DE - OE Quest Day - Guidance Dept. Vocational training.
Spencer Community	Students in high school are on work study programs. Teachers in elementary schools are introducing students to the awareness of jobs and what they entail.
Spencer	D.E.; O.E.; Visitations, Guest speakers, counselors, T & I
Estherville	Career education is taught incidentally and formally on a limited program (kits, resource people, etc.)
Armstrong	Each individual instructor is including some type of career education in their program.
LuVerne Community	1. Values clarification with 7th graders. 2. As appropriate, brought up in classes. 3. Courses such as consumer math and consumer education.
Everly	It is in the initial stage, mostly the planning stage.
Algona	We have continued to discuss careers and jobs in our elementary curriculum, making career Ed an integral part of our total curriculum. The middle school and high school have taken special steps to focus on careers.
Algona	Career awareness is being conducted by senior instructors and community resource people. Awareness is being weekly in home-room and then career awareness is worked into classrooms whenever possible.
Algona	8th grade - ½ hr. per week small or large group with student activities or speaker from local community. 7th grade - ½ hr combination of career education and self awareness program. 6th grade same as 7th grade.
Ayrshire Cons.	Work-study program
Garrigan - Algona Community	Area College programs are available in power mechanics and health occupations.
South Clay Community	Implementation within regular course areas.

RESPONSES TO NUMBER 26 (cont)

School District	Response
Ruthven Cons.	Have a job training exploritory into various occupations, information available on various positions, counseling at all levels.
Ruthven Cons.	Have means to explore careers, have three courses for job industry, allow on-the-job training.
Arnolds Park	Mostly through class discussion and teacher awareness of careers. Being brought up during occurances in class.
Terril	Career education course for all sophmores and seniors. Special interest areas. Entry-level job placement.
Spirit Lake	Concept is encouraged K-12, many teachers are doing great things to implement the concept.
Spirit Lake	D-Ed program added, emphasis on Industrial Arts program and illustrated to students how course (ie: English, Math) are used by people in our society.
Spirit Lake	By thinking of the greater community as a most useful resource to our program.
Lincoln Central	Part of 10 school project. Self awareness at K-level - Guidance dept. and several teachers at high school level are becoming involved. Newer texts now in use at elementary level have the concept built in.

27. If the answer to question number 25 is "Disagree" list below obstacles to implementation of the career education concept:

Response:

Persomel qualified to implement program - such as a guidance counselor

In-service training for staff. Acceptance of the career education concept by staff

Teacher training and experience in its implementation.

Career concept have to vogue for real evaluation.

RESPONSES TO NUMBER 27 (cont)

Response:

Money. Work opportunities. Resource people

Teachers must see the need before any change in curriculum is of any value. We haven't pushed for it. Resource people are not readily available in our small community. A large per cent of our students are interested in farming.

Not enough information and direction with regard to career education - need in-service and information.

Need to organize details of program. Need additional funds. Lack of job sites in district.

Funding and job placement.

Our proposal because of time problems is now being developed for 2nd semester implementation.

Lack of money. Lack of facilities. Lack of teacher time.

No leadership.

Deficient at 9th grade - need a work study exploration program. Need community help.

Teacher understanding. Better in-service.

An all school effort has never been exerted - we have the CE concept scattered throughout our school but not on a formal basis.

The counselor is quite unfamiliar with what is needed. The problems with setting up a work-study program.

33. How many of these days are devoted to career education in-service?

Days	Number	%
0	36	56
1	16	25
2	6	9
3	3	5
4 or more	3	5

34. What percentage of elementary (k-6) teachers were released for in-service activity other than for regularly scheduled in-service days?

Percentage	Number	%
0	11	26
1-10	7	16
11-24	5	12
25 or more	20	47

35. What percentage of secondary (7-12) teachers were released for in-service activity other than for regularly scheduled in-service days?

Percentage	Number	%
0	11	23
1-10	11	23
11-24	6	13
25 or more	19	40

NEEDS ASSESSMENT

Comprehensive program planning is basic to the implementation of any new program and begins with the needs assessment. A needs assessment is exactly what it says it is, an assessment of needs -- all needs. The comprehensiveness of the assessment is the springboard to program planning. A list of needs might include the following:

School Records

- survey of school population showing student population by grade level, number of families represented, and family economic level
- jobs held by adult members of family
- ethnic profile
- language of parents
- mobility rate

Educational Profile

- previous school performance of students, according to standardized and/or criterion referenced tests
- teacher opinion

Instructional Program

- curriculum offerings and schedules
- class size
- degree to which present program offers an individualized, diagnostic approach
- record keeping for continuous progress

Health

- type and amount of health services provided students
- available school personnel
- community/county/state resources

Parent Education

- existence or availability of parent education
- parent need
- available facilities

Parent/Community Involvement

- existing parent/community involvement
- parent/community interest
- community advisory committee
- human resources
- particular talents
- community business/industry resources

Staff Development

- existing staff development program
- inservice needs
- availability of library materials
- university or college offerings

District Support

- survey and analysis of district resources
- availability and types of consultant, guidance, health, etc. services
- district roles and objectives

IMPACT Vol. 3 #3-4

More Emphasis to Career Education

National public support is best reflected in the Gallup Poll Report of Fall 1973. This poll shows overwhelming approval of the suggestion that schools give more emphasis to a study of trades, professions, and businesses to help students decide on their careers. Nine in ten persons in all major groups sampled in this survey say they would like to have the schools give more emphasis to this part of

the educational program. Most of those who vote for this greater emphasis say this program should start with junior and senior high school. However, many professional educators think it should start in the elementary grades.

The Question:

Should public schools give more emphasis to a study of trades, professions, and businesses to help students decide on their careers?

	National Totals N=1,627 %	No. Children in school 928 %	Public School Parents 620 %	Private School Parents 124 %	Professional Educators 306 %
Yes, more emphasis	90	90	90	89	90
No	7	7	7	9	9
No Opinion	3	3	3	2	1
	100	100	100	100	100

(The Gallup Poll of Attitudes Toward Education 1969-1973. Phi Delta Kappa, Inc. Elam, Stanley Editor. P. 163.)

Assessment of the Quality and Effectiveness of Instruction at Iowa Lakes Community College

The factors for assessing the quality and effectiveness of instruction at Iowa Lakes Community College are found in the Follow-up Placements Study of 1972-1973; The Research Center Survey; The Student Survey; Technological Readiness Survey; The Survey of the Community; The Program Curriculum Evaluation; The North Central Report; Employer Ratings of Graduates; and Analysis of the Success of the ILCC Transfer Students at Four-Year Institutions.

INDICES:

QUALITY OF EDUCATION

Follow-up and Placements Study 1972-1973:

1. How satisfactory was the training or classwork the 1972-1973 students received at Iowa Lakes?

   Very Satisfied - 24% Satisfied - 69%
   Unsatisfied - 6% Very Unsatisfied - 1%

2. Did the Arts and Science students feel that Iowa Lakes Community College provided what was needed for the school they are now presently attending?

   Yes - 86% No - 14%

3. Did your stay at Iowa Lakes Community College help you at your present school?

   Yes - 88% No - 12%

4. Has your training at Iowa Lakes Community College helped you with your present job?

   Yes - 67% No - 33%

Research Center Survey:

1. College Effectiveness:

A high score suggests that in the opinion of members, the college has a favorable reputation in the community, has a good atmosphere for learning, and offers high quality programs.

ILCC		ALL SCHOOLS
3.3	Students	3.5
3.5	Faculty	3.4
4.0	Administrators	3.7

2. Quality of Courses:

Reflects the quality of randomly selected courses (classes) from the perspective students currently completing those courses. A high score denotes that the courses have provided students with useful ideas and skills, broadened their perspectives, and increased their interest in the course topics. High scores also indicate that students are satisfied with the way the courses are going and would recommend the courses to friends.

ILCC		ALL SCHOOLS
3.3	Students	3.4

Iowa Lakes Community College Student Survey:

1. Examinations are usually thorough and fair:

   Agree - 53%; Partially Agree - 40%; Disagree - 7% (N)= 391

2. Instructors are generally available for assistance with classwork:

   Agree - 61%; Partially Agree - 27%; Disagree - 12% (N)= 359

3. Lectures are dry, dull, and monotonous:

   Majority - 13%; Half - 39%; Minority - 48% (N)= 401

4. Instructors present material in an entertaining manner:

   Majority - 30%; Half - 49%; Minority - 21% (N)= 400

5. Instructors give disorganized, superficial or imprecise treatment of their material:

   Majority - 8%; Half - 21%; Minority - 71% (N)= 400

6. Out-of-class assignments are reasonable in length:

Majority - 45%; Half - 37%; Minority - 18% (N)= 397

7. Insufficient distinction is made between major ideas and less important details:

Majority - 15%; Half - 40%; Minority - 45% (N)= 398

8. Instructors relate course material to contemporary problems:

Majority - 37%; Half - 45%; Minority - 18% (N)= 400

9. Generally speaking, I have been very satisfied with the quality of the classroom, shop, and lab instruction that I have received at ILCC:

Agree - 66%; Undecided - 14%; Disagree - 7%; Mixed Feelings - 13%
(N)= 371

Survey on Decision-Making Practices, Technological Readiness, and Attitudes:

Board Members and Administrators

1. In terms of quality education, two years at ILCC is similar to two years at one of the state universities:

Agree - 72%; Disagree - 14%; Undecided - 14% (N)= 7

2. The Adult and Continuing Education evening classes at ILCC provide something for most everyone:

Agree - 100% (N)= 7

Survey of the Community:

1. In terms of quality education, two years at ILCC is similar to two-years at one of the state universities:

Agree - 49%; Disagree - 24%; Undecided - 27% (N)= 339

2. The Adult and Continuing Education evening classes at ILCC provide something for most everyone:

Agree - 86%; Disagree - 4%; Undecided - 10% (N)= 343

Program Curriculum Evaluation:

1. Arts and Science Division

   a. Currently Enrolled Students:
      i. Are the courses you are now taking challenging?

         Yes - 91%; No - 6%; Some - 3% (N)=1249

   b. 1971-1972 Graduates and Dropouts:

      i. Has your training at ILCC helped you at your present job?

         Yes - 100%

      ii. Did your stay at ILCC help you at your present school?

         Yes - 80%; No - 20%

      iii. How satisfactory was the training or classwork that you received at ILCC?

         Very Satisfactory - 22.8% Satisfactory - 70.6%
         Unsatisfactory - 6.0% Very Unsatisfactory - 0.6%

         (N)= 175

2. Vocational and Technical Division

   a. Graduates and Dropouts:

      i. Has your training at ILCC helped with your present job?

         Yes - 84%; No - 16% (N)= 100*

      ii. How satisfactory was your training or classwork that you received at ILCC?

         Very Satisfactory - 28% Satisfactory - 69%
         Unsatisfactory - 01% Very Unsatisfactory - 02%
         (N)= 100

North Central Survey: 1974
Instructional Strengths

The College has established a curriculum that has a total range of educational experiences for the students, both in the transfer

---

*Includes 51% of graduating students.

program and in the occupational vocational programs.

Placements:

Records and Placement Survey 1973:

Arts and Science Students from 1972-1973 at ILCC are presently:

Going to School	68%
Working Full Time	20%
Working Part Time	8%
Military	1%
Seeking Employment	2%
Unable to Work	1%

Vocational Students from 1972-1973 are presently:

Going to School	4%
Working Full Time	62%
Working Part Time	9%
Military	4%
Seeking Employment	16%
Unable to Work	3%
Unknown	2%

Were Iowa Lakes 1972-1973 graduates employed in fields or related fields they were trained for at ILCC?

In Occupation or Related Field	85%
Occupation Unrelated to Area Trained In	15%

Is your major field of study different than what you prepared for at ILCC?

Major Remained the Same	78%
Major Changed	22%

Employer Evaluation:

Employer Ratings of Graduates:

In a recent survey encompassing the last two graduation classes of all the vocational-technical programs, the graduates' first employers were asked to rate their performance on-the-job. There were 195 surveys sent with 103 being returned.

Survey Results:

Question:	By Percentage of Respondents Below Average (Poor)	Average	Above Average (Excellent)
How do you rate this person's preparation for his job?	7.9%	49.0%	43.1%
How does this employee relate to customers?	10.0%	27.0%	63.0%
How does this employee relate to the employer or immediate supervisor?	5.0%	22.5%	72.5%
If you have employed other people in the same type of position as that held by the referred individual, how does our graduate compare in reference to competencies needed to perform the job?	15.5%	25.8%	58.7%
Average of Responses:	9.5%	31.0%	59.5%

Based on past graduates' performances, do you plan to interview future graduates for possible openings?

Yes - 95% No - 5%

Transferability and Success at Four-Year Institutions:

Curriculum Evaluation Study:
Survey Question:

Did you experience any difficulty in transferring ILCC credits?

Yes - 21% No - 79%

Analysis of Success of ILCC Transfer Students at Four-Year Institutions[1]:

	Iowa State University	Mankato University	University of Iowa	University of Northern Iowa
Number of ILCC Transfer Students	22	35	23	46
Mean GPA of ILCC Transfer Students	2.49	2.78	2.44	2.70
Mean GPA of all Students from Iowa 2-Year Institutions	NG[2]	2.72	2.50	2.60
Mean Transfer GPA of ILCC Students	NG	2.72	3.00	2.92
Mean Transfer GPA of all Students Iowa 2-Year Institutions	NG	2.54	2.80	2.53
Breakdown of Cumulative GPA's of Enrolled ILCC Transfer Students by Percent				
0 to 1	0	0	0	0
1 to 2	27.00	8.6	22.00	0
2 to 3	55.00	54.3	52.00	74.00
3 to 4	18.00	37.1	26.00	26.00

Comments:

1. Iowa Lakes Community College transfer students are, in general, successful at four-year institutions.

---

1. Approximately 60% of ILCC transfer students transfer to the schools listed in this chart.

2. Not Given

2. The mean transfer GPA for ILCC students is higher than the mean transfer GPA of students from other Iowa two-year institutions.

3. The mean UNI and MSC GPA of ILCC transfer students is higher than that of students from other Iowa two-year institutions.

4. The mean U of I GPA of ILCC transfer students is lower than that of students from other Iowa two-year institutions.

5. Judging from the breakdown of cumulative GPA's it appears that ILCC transfer students are more likely to succeed at the University of Northern Iowa and Mankato State College than at Iowa State University or the University of Iowa.

6. Interpretation: It appears that the transfer GPA's of ILCC students are higher as compared to the transfer GPA's of other Iowa two-year institutions. However, the superior performance of ILCC transfer students as compared with transfer students from other Iowa two-year institutions at two of the three institutions, where comparative information is available, might indicate superior capabilities.

ANALYSIS:

The quality and effectiveness of instruction at Iowa Lakes Community College is excellent. Ninety-three percent of the respondents in the Follow-up Placements Study stated that they were satisfied with the training or classwork they received. Sixty-eight percent of the ILCC Arts and Science students successfully transferred to various four-year institutions, and 62% of the vocational-technical students were employed full time. Of those students who were employed, 85% were employed in their field or related field of training, while 78% of the transfer students remained in their field of preparation (major).

Employers consistently rated ILCC vocational-technical students by an average response rate of 59.3% as excellent and above average in their work performance. ILCC transfer students were successful at four-year institutions. At two (2) of the three (3) four-year

institutions, for which information is available, ILCC transfer students maintained a higher GPA than the average GPA of all transfer students from Iowa two-year institutions.

A. Assessment of Instruction

CONCLUSIONS:

1. Assessment of the Scope of Instruction

   a. Iowa Lakes Community College has an excellent scope of instruction which meets the educational needs of the people of Merged Area III and the ten (10) points of the law.

   b. A plan of action for the development and implementation of the courses of study identified in the Course Development Planning Report should be made.

2. Assessment of the Quality and Effectiveness of Instruction

   a. The quality and effectiveness of instruction at Iowa Lakes Community College is excellent.

POPULATION CHARACTERISTICS AND TRENDS

Population characteristics and the trends that develop must be seriously studied and considered in the process of evaluating educational needs for Area III. The following tables present population changes occuring in the last ten years, by county, considering all ages. Looking at the totals for each county, we see that Clay county had a decrease in population of forty between 1960 and 1970, leaving a total population in 1970 of 18,464. Dickinson county experienced a total decrease of nine, leaving a total of 12,565 in 1970. Emmet county dropped 862 between 1960 and 1970, leaving a total of 14,009. Kossuth county experienced a loss of 2,377 people in the same ten year period leaving their total population at 22,937. And Palo Alto saw it's numbers decline from 14,736 in 1960 to 13,289 in 1970 for a loss of 1,447 people.

Table XXII presents a breakdown by county of the population change between 1960 and 1970. Not only is the total population of each county considered but more specifically, male and female statistics are presented and twenty-three different age categories are considered.

In 1960 there were 85,999 persons in the five counties of Area III. In 1970 there were 81,264 persons, for a 4735 population decrease of 5.5 percent. The State of Iowa experienced a 2.4 percent increase in the same decade.

When the population of the various age categories is studied in detail some rather startling facts are revealed. In 1960 there were 9836 children under five years of age in Area III, but in 1970 that same age category contained only 6128 persons. This was a decline of 3708 children, or a loss of 37.7 percent from 1960 to 1970. Table XXIV contains further information on age group population comparisons.

Table XXIII presents the population number and the percent of change of each of the towns of the five counties of Area III from 1950 to 1960 to 1970.

The meaning of this data in terms of enrollment projections, labor supply and labor demand becomes obvious. If the out-migration continues at the rate that it did between 1960 and 1970, it compounds the already substantial decrease in the number of available young people caused by the decline in the birth rate. In otherwords, not only were there fewer young persons in 1970 than in 1960, below the age of 10 in Area III, but by the time they reach age 18, there will, in all likelihood, be an additional decline in their numbers due to out-migration.

Table 25 reveals the rate of live births per 1,000 population for each county of Area III and for the State of Iowa. From 1955 to 1972 there was a decline in the rate of live births per 1,000 in Area III of 11.8 while the figures for the State of Iowa show a 9.2 decline.

Table 26 presents some interesting comparisons concerning the elderly, by county and state totals. We see that while the index of aging for the state is 43.4, it is 47.4 for Area III. 13.6 percent of the population of Area III is sixty-five years and older while 12.4 percent of the total state of Iowa population falls in that age category.

Table XXII presents a breakdown of the median age of county and state population for 1960 and 1970. While the median age in the state of Iowa dropped from 30.3 in 1960 to 28.8 in 1970, the median age in Area III increased from 30.1 in 1960 to 31.6 in 1970.

Tables 27, 28 (1) and 28 (2) are maps showing the county configuration within the state of Iowa, the total population of each county within Iowa, the percent of the county population that is rural, the percent of population that is rural-farm, and the percent of population of each county that is rural non-farm.

Table 29 lists the population projections for Area III, for 1960-1980 as developed for the Governor's Planning and Programming Office.

AREA III EMPLOYMENT

The unemployment rate has risen drastically in recent times. The picture has become increasingly gloomy. Unemployment rates, even at their best, do not tell the complete story, however. Such reports do not reflect that many persons who would like to have full-time employment have to be satisfied with part-time jobs, and they do not describe how many persons hold down two jobs. And, one of the major problems with an unemployment report is that it does not provide a distinction betweens employed and under-employed persons.

An importment concern, especially for the rural areas, is that the majority of the unemployed are from seasonal, agricultural situations. Educational programming that can meet these persons' needs and provide alternatives to seasonal employment conditions is one goal for which the schools can strive.

Tables XXX, XXXI, XXXII, and XXXIII are intended to help fill in the employment picture in Area III. It must be understood at the start that employment and unemployment statistics are in constant change. But a study of such statistics does not lend itself to seeing important trends and drawing conclusions that will be of help as plans are made to best meet the career needs of persons in Area III.

Table XXX presents the number of persons in each of the five counties of Area III who are employed in numerous occupations, as of 1970.

Table XXXI sets out the numbers of males and females sixteen years old and over and their situations as this relates to the labor force. Table XXXIII is a break-down of Area III female employment as of 1970.

AREA III EMPLOYMENT: 1970

Financial Resources

Fiscal resources available to a school system will provide a major contributing (or limiting) factor in the decision to alter educational programming. Thus, given schools may reject consideration of curriculum development that would expand into career education areas not presently in operation.

Declining enrollment in most schools will have the effect of reducing pupil-teacher ratios, thereby driving up per pupil costs. One viable alternative may, in fact, be a cooperative development approach among clusters of schools in order to pool financial resources and make educational programming available to students not possible through a single district venture.

Data obtained from the Department of Public Instruction, Administration and Finance Section, is reported in Table XXXIV . This table reflects, among other factors, indices of ability to pay, namely, assessed valuation per child and per pupil expenditures.

PUBLIC SCHOOL CURRICULUM ANALYSIS

One basic question of importance addresses the issue of what is currently being taught. In order for well-founded planning to take place, this question must be thoroughly examined. A curriculum evaluation must occur to determine the status of the curriculum foundation prior to any re-modeling or building efforts of the educational endeavor.

Curriculum information supplied by the Department of Public Instruction was analyzed to describe current programming at the secondary school level. The data, presented in Table XXXV, categorize and summarize individual courses (grades 9 through 12) into basic curriculum areas.

The first 6 curriculum areas are those normally considered to be traditional or general courses for college bound youth. They are Art, English, Mathematics, Science, Foreign Language & Social Studies. The remaining 4 areas are classified as vocational in nature. They are Agricultural, Industrial Arts, Business, & Home Economics. Drivers Education and Physical Education courses were not part of this study.

The courses were arbitrarily placed in categories using as a guide the "Minimum Curriculum Requirements for Approval of Iowa Elementary and Secondary Schools and Curriculum Required by Law in Iowa Schools" published by the Iowa Department of Public Instruction.

A study of Table XXXV shows that approximately 63% of the public curriculum courses offered are general courses, traditionally for college preparation. 37% are vocational oriented. More courses are offered than are units of credit. This indicates that flexibility of scheduling and the probability of not only single semester courses, but also mini-courses for credit do exist.

This study does not presuppose the future of some of the smaller school district curricula. It does appear, however, that small enrollment in some of the curriculum areas, traditional as well as vocational, may be an indication of forced, future curriculum revision. Those schools that cannot justify extremely high per-pupil program costs due to light enrollment may have to consider the possibility of joint inter-school curricula efforts if continued program offerings are anticipated.

CENIS STUDENT INTEREST SURVEY

The CENIS Student Interest Survey was conducted early in 1973 on a sampling basis.

The survey was designed to sample the occupational interests of approximately 15 percent of Iowa's eleventh and twelfth grade students. Each of the fifteen area schools coordinated the survey within its merged area. Statewide, 123 public and fifteen private school districts participated with approximately 150 different high schools involved. Totally, 17,865 students were surveyed from a total population of 102,485, for a sample of slightly over 17 percent.

In establishing the sample, schools with junior-senior enrollment of three hundred or more were randomly sampled within. Schools with less than three hundred eleventh and twelfth graders were selected randomly. All juniors and seniors attending those schools were surveyed. See pp. 8.16 for the survey instrument.

Occupations surveyed corresponded with those encompassed in the CENIS Labor Demand Survey, but the coverage also included many professional occupations (requiring at least a baccalaureate degree). Students responded to a total of 206 occupational areas, divided into nine categories. The first entry in each category allowed the respondent to select a broad occupational area, while subsequent entries permitted more specificity. Space was provided for the student to write in other occupational choices not included on the list.

The five most popular vocational areas selected by the students in the statewide sample included (1) secretaries, (2) agricultural production, (3) transportation (truck drivers). (4) auto mechanics, and (5) general merchandise (sales occupations).

In Area III, the six most popular vocational areas were (1) agri-business, (2) public services, (3) health occupations, (4) fine arts/humanities, (5) business office, and (6) personal service.

Table XXXVI shows the student interest in occupations in rank order. Table XXXVII shows the student interest by occupational clusters. Selected occupations from the interest survey are also given in Table XLVI to show the relationship between student interest and labor supply and demand.

As a part of this total Career Needs Assessment Study for Area III, an occupational interests survey was taken of all tenth, eleventh, and twelfth graders in the twenty-four schools willing to participate. Approximately 350 occupational choices were given and students were asked to indicate their first, second and third choices. Table XXXIX presents a breakdown of those occupations selected as first choice by five or more students. The occupations are listed in clusters. This will enable a quick comparison with cluster results from the CENIS Student Interest Survey.

STUDENT FOLLOW-UP

The Guidance Services branch of the Department of Public Instruction accounts for high school graduates and high school dropouts on a yearly basis.

According to the information released by the Guidance Services branch, approximately fifty-eight percent of the Area III 1972 high school graduates are pursuing further education or training; twenty-eight per cent are employed full-time, and fourteen percent are engaged in other pursuits. See Table XXXVLII

A four-year state composite follow-up study of all Iowa high school graduates is presented in Table XLI.

Information from Table XLII indicates a trend for fewer graduates to pursue further education and training. In 1969, sixty-three percent of the graduates were in this category as opposed to forty-nine percent of the 1972 class. However, there is an increase in the trend for graduates to be involved in full-time employment from twenty-four percent in 1969 to thirty-two percent in 1973.

It is interesting to compare the future plans of Area III tenth, eleventh, and twelfth graders with the average of the 1971 and 1972 follow-up studies. As part of the student interest inventory, fifty-five percent of the tenth, eleventh, and twelfth graders indicated plans to enter further education or training upon graduation; fifteen percent intend to enter full time employment; six percent plan to go into military service; three percent intend to become homemakers; and twenty-one percent are undecided.

Another classification of students that leave the educational system X-12 are the dropouts. Table XLV documents this information. In 1972 the Area III dropout rate was 1.51 percent; in 1973 it was 1.55 percent. Generally speaking the urban area has a higher dropout rate than does the rural area.

CAREER EDUCATION NEEDS INFORMATION SYSTEM (CENIS)

CENIS LABOR DEMAND SURVEY

In the early 1970's the Iowa Department of Public Instruction generated the CENIS Survey Project. Organized on a state-wide basis, the CENIS project samples representative employers and from that sampling projects a labor demand analysis for approximately 300 occupations for each merged area and for the state as a whole.

Factors included in the CENIS - collected data are full-time employees, current vacancies, estimated employment levels for one, three, and five years; and replacement needs for each of those three years.

The approximately 300 occupations included in the survey were those that required less than baccalaureate degree preparation or that were currently being taught at secondary and post-secondary training programs. Survey entries were tabulated according to the Dictionary of Occupational Titles (DOT) codes and titles.

For the purposes of this study, the labor demand and supply information was classified into the fifteen occupational clusters. Full-time employment for Area III in occupations requiring less than baccalaureate preparation is indicated along with the replacement demand for 1975 and 1977.

The Labor Demand Analysis tables of the CENIS report indicated labor needs as expressed by both replacement (due to turnover) and expansion. These indicators constitute another of the input variables utilized in considering the manpower need picture in conducting feasibility studies.

Another factor that addresses needs assessment is an analysis of student interests. In attempting to give this more total picture, Table XLVI presents

not only the number of persons presently employed in a specific occupation and the Labor Demand caused by replacement, but also the specific student interest in each occupational area listed. Table XLVI also includes the CENIS estimate of the number of new positions available in each of the occupational areas in 1977. This figure, considered with the replacement figures, should give an approximate view of employment trends in each occupation considered.

The Fine Arts and Humanities and the Marine Science clusters do not appear in Table XLVI since there is apparently little or no employment in Area III of persons with less than baccalaureate preparation in these areas.

AREA III SCHOOL ENROLLMENT DATE, PROJECTIONS, AND EDUCATIONAL CHARACTERISTICS

The greatest and most valuable resource with which the educational enterprise deals is obviously the human factor, the consumer of educational resources. The status of enrollment levels, present and predicted, is another critical planning factor that must face evaluation prior to curriculum modification.

In those districts where a decline in student numbers is occuring, the character of the curriculum may of necessity face alteration simply because of the decreased student demand for selected courses of study. On the other hand, those districts anticipating growth, or at least stability of student numbers, may find curriculum revision necessary due to changes in student demand emphasis. In either case, the educational unit must carefully analyze the student population as a part of the planning process.

The trend in recent years for the preponderant number of school districts is toward declining numbers in the student population. Even though total student numbers are in the downswing, a growing emphasis on career education is emerging in the school districts within Merged Area III.

Evaluation of the enrollment picutre serves as one important means of analyzing the emergining needs of the district in planning decision efforts.

Analysis of enrollment trends is presented by school district in Tables. XLVIII.

Each table consists of the enrollment projections by grade for each school district. This data was computed by the Department of Public Instruction, taking into consideration a need to compensate for migration, attrition, and other factors affecting enrollment. The kindergarten class data for each year 1974 through 1978 was obtained from the School Census Report received from each school district.

A composite picture of the enrollment level for Area III shows that while grades 9 through 12 remain fairly constant over the five year period, 1974-75, through 1978-79, there is a more drastic decrease in the elementary grades.

Table XLVIII lists a number of educational characteristics that are of importance in obtaining a more total picture of trends and needs of Area III. The breakdown for each of the five counties, as well as Area III totals and State of Iowa totals are presented. Information was gathered from 1970 Census materials.

BECOMING OPERATIONAL

THE CURRICULUM VITAE OF IOWA LAKES COMMUNITY COLLEGE

INTRODUCTION:

This section has been designed to provide an overview of the attributes and character of Iowa Lakes Community College. This section provides a background or milieu in which assessments and action plans are made. A general understanding of Iowa Lakes Community College will give substance to the nature of the activities and latitudes of ILCC.

15. Finances

THE PURPOSE AND GOALS OF THE INSTITUTION

Iowa Lakes Community College is a comprehensive Community College[1] dedicated to meeting the educational needs of all the people in Merged Area III.[2] The institution seeks to serve the general population, the educationally, economically, and socially disadvantaged, and the mentally and physically handicapped. The institution endeavors to provide a wide range of educational opportunities so that every student or participant may develop his or her capabilities to the fullest extent possible.

The mission of the institution is to be responsive to the varied needs of a heterogeneous clientele. The institution meets these needs by providing programs and offerings which include the first two years of college work, pre-professional education, vocational and technical training, in-service training and re-training of workers, high school completion, and continuing education; by providing training, re-training, and all necessary preparation for the productive employment of people; by providing community services; by providing activities which further and enhance the life styles of students and participants; and, by recognizing and responding to the educational needs of the people of Merged Area III.

The institution is committed to an open-door policy: to offering educational services at moderate cost, and to providing guidance, counseling, and personal services to all engaged in the institution's activities. The institution is further committed to engendering a wide

---

[1]A comprehensive community college is one that offers all of the services as defined in the Iowa Area College Law, Section 280 A, Code of Iowa

[2]Reference: Institutional Data, Vol. II, Section XX

variety of extra-curricular activities in order to fulfill students' and participants' need for well rounded cultural and social lives at Iowa Lakes Community College. These extra-curricular activities include art, drama, athletics, political awareness, lectures, intramural sports, music, and other activities.

Meeting the needs of people necessitates offering programs and services during both day and evening hours and at locations that are distant from the main attendance centers[1] to provide greater accessability for the public. Delivering educational programs, offerings, and services to the student is consistent with the institution's student oriented philosophy. The true measure of the institution's educational effectiveness is rooted in the quality of instruction and assistance given to students and the achievement by the students of their respective educational goals. Techniques and methods of instruction are designed for learning rather than for teaching. The institution is continually evaluating the methods and processes of instruction in order to create better learning environments and learner oriented activities.

The institution seeks to be innovative and creative in designing its educational offerings and services. This innovativeness makes the educational opportunities at the college unique. The institution is engaged, on a continual basis, in self-evaluation and self-assessment in order to ascertain the effectiveness of the instruction in achieving its goals. This process of self-study is instrumental in the designing of alternative approaches for achieving established goals, in the identification of new areas of need, and in the development and

---

[1] Reference: Institutional Data, Vol. II, Section XXI

implementation of new objectives and procedures. It is through this continual evaluation process that Iowa Lakes Community College remains both flexible in meeting educational needs and relevant to its social context.

Briefly stated, the purposes and goals of the institution are:

1. As authorized by law[1] to make educational and community activities available at moderate or no cost to the people of Merged Area III.

2. To provide liberal arts courses[2] and to ensure that those courses are transferable to any four year college or university.

3. To provide a selection of career, vocational, and technical training and re-training programs for those who seek gainful employment and employment up-grading and to insure that students and participants are well prepared for entrance and promotion in their chosen fields of work.

4. To provide in-service training and re-training for workers.

5. To provide guidance, counseling, and personal services to those individuals participating in the activities of the institution.

6. To engender a program of extra-curricular activities so as to insure access to a well rounded cultural and social life for those individuals participating in the activities of the institution.

7. To provide programs of instruction, such as high school completion; career, technical, and vocational education; the first two years of college education; continuing education; community services; enrichment activities; and adult basic education at hours and at locations accessable to the public.

---

[1]Reference: Institutional Data, Vol. II, Section XXII

[2]Reference: Institutional Data, Vol. II, Section XXIII

8. To make programs, services, and offerings accessible to the educationally, economically, and socially disadvantaged, and the mentally and physically handicapped.

9. To foster among students and participants an awareness of their responsibliities as citizens in our contemporary and everchanging society.

10. To provide students and participants with avenues of exploration that lead to greater self-fulfillment and better use of leisure time.

11. To continually evaluate and assess programs and services for their improvement and for the development of more effective and responsive programs, offerings, and services.

HISTORY AND CHRONOLOGY

Iowa Lakes Community College was officially organized on January 12, 1967, as authorized by Iowa Senate File 550, the Iowa Area College Law, which had passed the Iowa Legislature in 1965. Upon organization, the college's first board of directors began planning for the development of the college.

Estherville Junior College, which had been operated by the Estherville Community School District since its founding in 1924, was absorbed by Iowa Lakes Community College in 1968, the ownership of the Rotunda classroom building passing to the college. Construction of this facility had been made possible through popular community subscription of $213,000 in matching funds for federal grants. This community interest and concern in higher education continues and is reflected in bequests, trusts, and gifts to Iowa Lakes Community College.[1]

Emmetsburg Junior College, which was founded in 1930, was absorbed by Iowa Lakes Community College in 1970. Board policy calls for the operation of two attendance centers, with general education courses offered at both centers. A single administrative staff is charged with the operation of the entire system.

By the Fall of 1971, Iowa Lakes Community College had experienced two academic years with declining enrollment in the traditional junior college arts and sciences program. At that time the institution had not yet become flexible in determining the needs of people in Area III and in establishing programs to meet those needs. Therefore, the situation in the Fall of 1971 called for some retrenchment of faculty and some staff reassignment, but, most of all, it called for a new approach to

---

[1]Reference: Institutional Data, Vol. II, Section XXIV

education, new attitudes, and new concepts in serving the educational needs of the people of the community.

The answer to the problem clearly lay in developing more adult educational programs and more vocational and technical programs and in redesigning the traditional Arts and Sciences offerings. This period saw the emergence of the Career-Option programs, which provide a choice between more education following graduation or immediate employability. New offerings attracted new students as the emphasis was shifted from the traditional to the innovative.

With the addition of program offerings and the accompanying growth in student enrollment, there has been a corresponding expansion of the instructional staff, supportive personnel, and physical facilities to meet this growth, as shown in the graph on the following page:

CORRELATION OF FACULTY, PROGRAM, AND STUDENT GROWTH

The first phase of the classroom facility program at the South Attendance Center was completed in 1970 at a total cost of $750,000. This was financed through a State of Iowa grant and funds from the 3/4 mill capital improvement tax levy. The second phase was finished in 1973 at a cost of $660,000, financed through a Higher Education Facility grant and funds from the 3/4 mill levy.

The classroom facilities at the North Attendance Center were completed in 1972. Phase I of this complex cost $797,650 and was financed by 3/4 mill funds and a grant from the Higher Education Facility. Phase II was financed by funds realized through the sale of the Rotunda Building and from the 3/4 mill levy.

A chronological history detailing important events in the college follows:

CHRONOLOGICAL HISTORY

1965 Senate File 550, authorizing the establishment of area schools in Iowa, was passed by the Iowa Legislature.

1965 Series of preliminary meetings of county superintendents of seven northwest Iowa counties was begun for discussion of formation of merged area.

1966 Proposal for Merged Area III, composed of Clay, Dickinson, Emmet, Kossuth, and Palo Alto counties (Buena Vista and Pocahontas counties having withdrawn from the discussions), was adopted. State approval was given.

1966 Special election was held to name directors for the seven director districts in Area III.

1967 The Board of Directors of Iowa Lakes Community College was organized, electing Jack Tatman, Spirit Lake, as president.

1967 Doyle Carpenter took office as first superintendent of the college.

1967 Proposal for a 3/4 mill levy for capital improvements was approved by the voters of Area III and took effect with the year 1968.

1967 Iowa Lakes assumed operation of vocational courses that had been operated by Estherville Junior College.

1967 The Board of Directors voted to locate the vocational and technical programs at the South Attendance Center in Emmetsburg and to develop the general education programs at the North Attendance Center in Estherville.

1967 A 120-acre site was purchased at Emmetsburg at a cost of $120,000, while a 13-acre site was purchased at Estherville for $12,438.

1967 NEW PROGRAMS ADOPTED

VOCATIONAL	ARTS & SCIENCE	ADULT EDUCATION
Office Clerical	Arts & Science curriculum assumed from Estherville Junior College	Adult Basic Education
Licensed Practical Nursing		High School Completion
Auto Mechanics		Continuing Education
Farm Equipment Mechanics		
Auto Body		
Feed & Fertilizer		

1968 Dr. H. Edwin Cramer was elected superintendent to succeed Doyle Carpenter

1968 Complete jurisdiction over the operation of Estherville Junior College was assumed.

1968 NEW PROGRAMS ADOPTED

VOCATIONAL	ARTS & SCIENCE	ADULT EDUCATION
Secretarial		College Parallel Extension

1969 NEW PROGRAMS ADOPTED

VOCATIONAL	ARTS & SCIENCE	ADULT EDUCATION
Marine & Small Engine	Arts & Science curriculum assumed from Estherville Junior College	Career Short Term Preparatory
Farm Management		Career Supplemental
		Nurse Aide - Orderly

1970 Completion of Phase I of the buildings at the South Attendance Center, providing facilities for several vocational programs that had previously been housed temporarily in rented facilities throughout Area III.

1970 Emmetsburg Junior College, which had been established in 1930 and was operated by the Emmetsburg Community School District, was absorbed by Iowa Lakes Community College, making it possible to offer general education courses at both attendance centers.

1970 Following motion was adopted by Board of Directors at its August 25 meeting:

"To meet the needs of the heterogeneous clientele, multiple and varied programs shall be offered within each of the major subject areas of the community college, as well as

curricula which are varied according to the abilities, interests, and goals of the student population on each of the existing campuses."

1970 NEW PROGRAMS ADOPTED

VOCATIONAL	ARTS & SCIENCE	OTHER SERVICES
Retail Sales and Marketing		Fire Fighting
Farm Cooperative		American Institute of Banking

1971 Board of directors reorganized to conform to "one man-one vote" rule.

1971 The 3/4 mill levy was approved by the voters of Area III.

1971 Richard H. Blacker was named Acting Superintendent to succeed H. Edwin Cramer, who resigned. Mr. Blacker was subsequently elected Superintendent.

1971 NEW PROGRAMS ADOPTED

VOCATIONAL	ARTS & SCIENCE	OTHER SERVICES
Associate Degree Nursing		
Special Needs		

1972 New classroom building was completed at the North Attendance Center. The Rotunda Building was sold to the Estherville Community School District for $350,000.

1972 NEW PROGRAMS ADOPTED

VOCATIONAL	ARTS & SCIENCE	OTHER SERVICES
Parts Personnel	Veterans A.D.V.A.N.C.E.	Mental Health Project
Accounting Specialist	Instrumental Music	EMTA
Work Adjustment Center		

1973 The second phase of the facilities at the South Attendance Center was completed.

1973 Farm near Emmetsburg was purchased for laboratory use by the Agriculture Education Department.

1973 NEW PROGRAMS ADOPTED

VOCATIONAL	ARTS & SCIENCE	OTHER SERVICES
Carpentry	Journalism/Photography	Career Education Co-ordinator for local schools
Dairy Farm Management	Rehabilitation Facilities Specialist	
Motor Lodge-Motel Management	Junior Executive Sec.	
Secondary Exploratory	Secretarial Management	
Power Mech.	Business Administration	
Secondary Exploratory Health Occ.		
Ag Evaluation Center		
Upward Bound		
Special Services		

1974 Joseph Graff, Spencer, was elected president of the board of directors.

1974 Construction of greenhouse, milking parlor, two silos, and cattle and hog feeding facilities completed for the Agriculture Education Department.

1974 NEW PROGRAMS ADOPTED

VOCATIONAL	ARTS & SCIENCE	OTHER SERVICES
Horticulture	Recreational Specialist	Aging Programs
		Criminal Justice
		Spencer Learning Center
		CETA Programs

1975 Student Center opened at the North Attendance Center

1975 NEW PROGRAMS ADOPTED

Secondary Health	Data Processing Specialist	Summer CETA
New Section:	Environmental Technology	Youth Conservation Corp.
Swea City (1)Section		CETA Youth Recreation
Emmetsburg(2)Section		CETA Youth Career Development
Secondary Power Mechanics		
New Section:		
Emmetsburg(1)Section		
Secondary Agriculture		
New Program:		
Emmetsburg(2)Section		

THE SERVICE AREA - MERGED AREA III

Merged Area III is composed of five counties: Clay, Dickinson, Emmet, Kossuth, and Palo Alto, and encompasses thirty school districts, two of which are parochial systems. These five counties constitute the major service area of the College. However, students also come from other counties surrounding the service area. The quality of the programs and services offered by Iowa Lakes Community College has attracted many students from outside of the service area. A majority of these students come from the 12 contiguous counties surrounding the planning and service area. The map below shows the five county area that supports the College through a 3/4 mill operational levy and a 3/4 mill capital improvement levy, and the surrounding counties from which a significant number of students come.

Indices: COURSE DEVELOPMENT PLANNING REPORT

Program Development:

Planning for new programs proceeds on both a short-term and long-term basis. The procedure for identifying needs for new programs and determining employability is clearly laid out. As a program is developed it passes through several stages -- Request, Investigation, Development, and finally, Implementation. As a program develops through each stage it is presented to the Board of Directors for approval to proceed with the next stage of development. When documentation is complete, need has been established, and the recommendations of an advisory committee have been studied in developing the program curriculum, the final proposal is submitted to the State Board of Instruction for approval. (Prior to submission to the State, articulation with other institutions has been explored where the transfer of credits may be involved.)

Each department chairman submits annually his short-term and long-term program projections to the Assistant Superintendent for Instruction. Departmental program planning for the 1975-76 academic year includes the following new programs:

Environmental Technician; Data Processing Specialist; Welding and Cutting;

Secondary Preparatory Carpentry; Secondary Exploratory Power Mechanics;

Agriculture Career Awareness; Supplemental Continuing Education in Agriculture;

College Transfer Agriculture, and Secondary Exploratory Health Careers

Programs identified for development at a later date are:

Legal Assistance or Lawyer's Assistant; Physical Therapy Assistant;

Medical Assisting; Masonry; Millwork and Cabinet Making;

Plumbing and Heating; Electrician; Vocational and Occupational Education in Commercial Music;

Integrated Humanities; Corrections Specialist; Athletic Trainer;

Agricultural Equipment Operation; Agricultural Equipment Sales;

Agricultural Sales; Agricultural Resources; Horse Management;

Agricultural Adjustment Center; Horticultural Therapy;

Food Management; Food Production; Automotive Sales Specialist;

Court-Conference Reporting, and Industrial Field Laboratory

Educationally related programs and services have also been identified by Department Chairmen and others. They are as follows:

Financial Services; Summer CETA Program; Expanded Sheltered Workshop;

and, Programs for Senior Adults

ANALYSIS:

Iowa Lakes Community College provides instruction or related instruction in 93% of the professional areas of work identified by students in the Professional, Technical and Vocational Interest Survey[1]. The college also provides instruction or related instruction in 63% of the vocational-technical areas of work identified in the same survey. An additional three (3) programs or 10% of the identified occupations are under consideration for development and implementation[2].

---

1. Instruction for the remaining 7% of the identified areas of work is provided by other schools.

2. Instruction for 17% of the identified areas of work is provided by other schools. Ten percent of the identified areas are unmet.

Iowa Lakes Community College provides instruction, programs and services, as mandated in the ten (10) points of the Law.

Iowa Lakes Community College has projected enrollment figures which will necessitate an expansion in the programs and services offered.

Through the Course Development Planning Process, faculty members and Department Chairmen have identified several areas of instruction for implementation on immediate and long-term bases. Services have also been identified for implementation.

1975 Wage and Employment Practices Survey

During the 1974-75 fiscal year, Iowa Lakes Community College, in cooperation with the McQuay-Perfex Company of Spirit Lake, surveyed a number of regional industries as to their wage and employment practices. For the sake of brevity, the wage section is included in this report.

This data should be useful from two standpoints. First, the reader will be able to determine the specific occupations available for employment in each of the surveyed industries. Second, the reader can gain an idea of the specific salaries available for various types of work in this region.

WAGE RATES AND EARNINGS

FACTORY, OFFICE & SALARIED	STARTING	AVERAGE	TOP
ALFS MANUFACTURING CO.			
Final Inspector	$2.10	$2.60	$3.80

Draftsman	2.39	3.95	4.99

V. Study Applications for Career Development in Merged Area III

The reader will probably see many applications of the enclosed information, and we do not presume to limit these applications by suggesting the following:

1. Questions 1 through 16 of the Curriculum Survey can be used by educators to identify strengths and weaknesses of ongoing career education efforts. By considering student opinion, an idea can be gained as to program effectiveness within each school in attaining career development goals. By comparing student, teacher, administrator, and parent responses, differences in perception as to program effectiveness can be identified and possibly rectified.

2. Questions 17 through 22 of the Curriculum Survey indicate universal acceptance of nontraditional approaches to education by the four groups surveyed other than quitting school. Schools may wish to take a closer look at implementation of some of these programs.

3. Teachers may wish to review Questions 29 and 37 of the Curriculum Survey to determine how students view the degree of relevancy students see specific course offerings to their own needs and goals.

4. Question 31 of the Curriculum Survey provides data on where students receive information on careers. Educators may wish to review this data for their own school and determine if students are receiving information from the most desirable sources.

5. Questions 33 and 36 of the Curriculum Survey provide highly interesting data on student's intentions after high

school, geographically and educationally. Community leaders may be interested in the high tendency of students to leave the area.

6. Responses to Questions 34 & 35 of the Curriculum Survey indicate a high degree of unrealistic expectations in terms of current reality in job changes and educational requirements for most jobs.

7. Population and enrollment data must be considered in long-range planning. Indicators are that enrollment in school will continue to deadline. This makes joint cooperative efforts or consolidation more and more likely in the years ahead.

8. Employment information, projected job availability, current wage information and student occupational interest is provided. This data should prove useful to educators attempting to provide realistic occupational forecasts and realistic options to students, and educators involved in curriculum planning, especially at the secondary level.

9. Numbers of curriculum units available in each school are provided. Lists of specific courses offered are available for any school interested in cooperative efforts with neighboring districts.

10. Follow-up data on graduates and dropouts can be useful to schools in aligning their elementary and secondary programs with the reality of where the students actually are going.

VI. Study Limitations

The study did not succeed in involving all twenty-eight public districts, as four of them had supplied no data by computer processing time.

Student surveys were limited to grades 10, 11, and 12. We felt that the information from students at this level would be more realistic than that attained at lower grades.

The parent sample was not as large as hoped, but we feel the sample received provides data of adequate validity.

All information provided should be viewed carefully. Often unseen factors may be of influence, but easily overlooked. For instance, the data on school course relevancy, while on the surface indicating an objective student evaluation, may be heavily influenced by the numbers of students enrolled, often mandatorily. Also, wage and employment data changed constantly, and this information should be considered as relevant to that specific point in time.

While information in any study has its limitations, it should provide a tentative base for decision making, and provide groundwork for additional supplementary research.

VII. Dissemination

The present plan for dissemination includes two copies for each public and parochial school in Area III, a copy for each administrative head at Iowa Lakes Community College, an initial ten copies for the Iowa DPI, and copies for other public agencies in the area.

Anyone interested in receiving a copy of this study should contact the Iowa Department of Public Instruction.

APPENDIX

VIII

CAREER EDUCATION SURVEY - STUDENT

INSTRUCTIONS: Please read each of the statements below concerning your school. Indicate the degree of help your school gives you regarding each one of the statements below. Circle "1" on your answer sheet if you think your school gives you no help; "2" if you think your school gives you very little help; "3" if you think your school gives you some help; "5" if you think your school gives you a great deal of help; or "6" if you don't know.

	No Help	Very Little Help	Some Help	Much Help	A Great Help	Don't Know
1. My school has activities that help me find out what work and jobs mean	1	2	3	4	5	6
2. My school helps me see my strengths and my interests when I am thinking about choosing a job	1	2	3	4	5	6
3. My school has activities that help me to choose a group of jobs to study	1	2	3	4	5	6
4. My school helps me to recognize and understand those things in my life that are important to me	1	2	3	4	5	6
5. My school helps me plan what courses and activities I should take in school and beyond to be prepared to do the job for which I am planning	1	2	3	4	5	6
6. My school helps me see the special skills needed by people who work in various jobs	1	2	3	4	5	6
7. My school helps me discover my interests, my abilities, and my feelings that relate to a group of jobs in which I think I might like to work	1	2	3	4	5	6
8. My school has activities that help me develop a positive concept of myself	1	2	3	4	5	6
9. My school helps me see that a person's standard of living depends on the kind of job he has as a wage earner	1	2	3	4	5	6
10. My school helps me learn the relationship between an occupation and leisure time	1	2	3	4	5	6
11. My school has activities that teach me to appreciate the dignity and value of work	1	2	3	4	5	6
12. My school provides experiences for me to use tools and equipment that are used in various groups of jobs	1	2	3	4	5	6

	No Help	Very Little Help	Some Help	Much Help	A Great Help	Don't Know
13. My school helps me match my interests and abilities with the skills that are needed in groups of jobs	1	2	3	4	5	6
14. My school helps me to see that "how I act and what I am" may fit one kind of job more than another kind of job ..	1	2	3	4	5	6
15. My school has activities showing why certain types of jobs require more education and training than other kinds of jobs	1	2	3	4	5	6
16. (Answer this question only if you have decided upon a specific career choice. Otherwise, leave blank.) My school helps me get the skills that are basic to a single job for which I am planning	1	2	3	4	5	6

17. Some students have no interest in school work as now offered in junior and senior high school and they become a problem. Here are some ways that have been proposed for dealing with these students. Will you indicated in the case of each proposal whether or not you approve of it?

a. Permit these students to quit school?	__ Yes	__ No	__ Don't Kn
b. Have businesses and industries provide on-the-job training as a substitute for regular school	__ Yes	__ No	__ Don't Kn
c. Have special training courses which would prepare them for jobs	__ Yes	__ No	__ Don't Kn
d. Have a work-study program (½ day at school, ½ day on-the-job training)	__ Yes	__ No	__ Don't Kn
e. Give school credit for volunteer work during the school day with an approved organization such as a local hospital, day-care center, and the like	__ Yes	__ No	__ Don't Kn
f. Have separate programs for students with out-of-the ordinary interests and talents	__ Yes	__ No	__ Don't Kn

Please indicate how well your school relates the subject matter of each course listed below to how that course will help you when you are making decisions about selecting a job and when you are working in that job.

18. Art	1	2	3	4	5	6
19. Business	1	2	3	4	5	6
20. English	1	2	3	4	5	6
21. Foreign Language	1	2	3	4	5	6
22. Homemaking	1	2	3	4	5	6

	No Help	Very Little Help	Some Help	Much Help	A Great Help	Don't Know
23. Industrial Arts	1	2	3	4	5	6
24. Mathematics	1	2	3	4	5	6
25. Music	1	2	3	4	5	6
26. Physical Education	1	2	3	4	5	6
27. Science	1	2	3	4	5	6
28. Social Studies	1	2	3	4	5	6
29. Vocational (Specify _____)	1	2	3	4	5	6

30. If you could get a good full-time job, would you prefer to continue going to school? ..... __ Yes __ No __ Don't Know

You may select more than one answer for any of the following questions number 31 through 35. Circle the corresponding letter.

31. If I want information about jobs in which I am interested as a career I would go to:

A. a teacher
B. a counselor
C. parents or relatives
D. the library
E. workers on the job in which I am interested in

32. I have investigated jobs or career opportunities through:

A. courses in school
B. part-time summer work
C. visiting a business, professionial office, factory, farm or medical facility.
D. scouting, 4-H or other youth groups
E. have not investigated any career

33. When I enter the job market, I plan to stay:

A. in my hometown
B. in Northwest Iowa
C. in Iowa
D. in the Midwestern United States
E. elsewhere

34. I expect to change jobs during my lifetime:

A. not at all
B. one time
C. two times
D. three times
E. four times
F. five times

35. What percentage of jobs require a four-year college degree?

A. 10%
B. 20%
C. 30%
D. 40%
E. 50%

36. What are your plans after graduating from high school?(circle only one answer)
A. homemaker
B. work full-time
C. enroll in a 4-year college or university
D. enroll in a community college and them finish, at a 4-year college or university.
E. enroll in a community college or public vocational-technical school only
F. enroll in a private barber, cosmetology, nursing, business, or trade school
G. go into military service
h. don't know

37. Based upon your answer to question number 36, which high school courses are most important to you. Cirlce letter of your choices

A. Art
B. Business
C. English
D. Foreign Language
E. Homemaking
F. Industrial Arts
G. Mathematics
H. Music
I. Physical Education
J. Science
K. Social Studies
L. Vocational

38. What is the overall educational goal of the school you attend? Circle only one

A. to prepare students for college
B. to prepare students for jobs
C. to develop students individually (become more secure, self-confident, etc.)
D. to graduate students and get them out of school
E. don't know

39. Using the "Hal" occupation listing, select you first, second, and third career choices. Please list the career and the code number directly to the left of it.

	Code Number	Career
A.	_____	_____
B.	_____	_____
C.	_____	_____

40. Your school district is: _____

41. Please indicate your grade in high school:

A. sophomore B. junior C. senior

CAREER EDUCATION SURVEY - TEACHERS

Career Education is the sequence of career development experiences, beginning in early childhood and continuing through adult life, that prepares individuals for present and future career opportunities. These experiences are offered through various programs, services, and activities which are designed and implemented to assist youth and adults develop occupational compentencies and attitudes which facilitate employment and/or advancement in an occupation and which will result in meaningful career development. The following questions are based on the Career Education Concept.

INSTRUCTIONS: Please read each of the statements below concerning you classes. Indicate the degree of help your classes give your students regarding each of the statements below. Circle "1" on you answer sheet if you think your classes give your students no help; "2" if you think your classes give your students very little help; "3" if you think you classes give your students some help; "4" if you think your classes give your students much help; "5" if you think your classes give your students a great deal of help; or "6" if you don't know.

	No Help	Very Little Help	Some Help	Much Help	A Great Help	Don't Know
1. My classes have activities that help my students find out what work and jobs mean.....	1	2	3	4	5	6
2. My classes help my students see their strengths and interests when they are thinking about choosing a job.....	1	2	3	4	5	6
3. My classes have activities that help my students choose a group of jobs to study.....	1	2	3	4	5	6
4. My classes help my students to recognize and understand those things in their lives that are important to them.....	1	2	3	4	5	6

6. My classes help my students see the special skills needed by people who work in various jobs.....	1	2	3	4	5	6
7. My classes help my students discover their interests, abilities, and feelings that relate to a group of jobs in which they think they might like to work.....	1	2	3	4	5	6
8. My classes have activities that help my students develop a positive concept of self.....	1	2	3	4	5	6
9. My classes help my students see that a person's standard of living depends on the kind of job he has as a wage earner.....	1	2	3	4	5	6
10. My classes help my students learn the relationship between an occupation and leisure time.....	1	2	3	4	5	6

11. My classes have activities that teach my students to appreciate the dignity and value of work..... 1 2 3 4 5 6

12. My classes provide experiences for my students to use tools and equipment that are used in various groups of jobs..... 1 2 3 4 5 6

13. My classes help my students match interests and abilities with the skills that are needed in groups of jobs..... 1 2 3 4 5 6

14. My classes help my students to see that "how I act and what I am" may fit one kind of job more that another kind of job..... 1 2 3 4 5 6

15. My classes have activities showing why certain types of jobs require more education and training than other kinds of jobs.. 1 2 3 4 5 6

16. My classes help my students get the skills that are basic to a single job for which they are planning..... 1 2 3 4 5 6

17. Some students have no interest in school work as now offered in junior and senior high school and they become a problem. Here are some ways that have been proposed for dealing with these students. Will you indicate in the case of each proposal whether or not you approve of it?

a. Permit these students to quit school?..... __ Yes __ No __ Don't Kno

b. Have businesses and industries provide on-the-job training as a substitute for regular school..... __ Yes __ No __ Don't Kno

c. Have special training courses which would prepare them for jobs..... __ Yes __ No __ Don't Kno

d. Have a work-study program (½ day at school, ½ day on-the-job training)..... __ Yes __ No __ Don't Kno

e. Give school credit for volunteer work during the school day with an approved organization such as a local hospital, day-care center, and the like..... __ Yes __ No __ Don't Kno

f. Have separate programs for students with out-of-the ordinary interests and talents..... __ Yes __ No __ Don't Kno

(Mark "1" for Agree; "2" for Disagree; "3" for Don't Know)

	Agree	Disagree	Don't Know
18. The career education concept helps students in all grade levels and all subjects.....	1	2	3
19. The career education concept helps students who are preparing for job entry or vocational-technical education immediately after graduation.....	1	2	3
20. The career education concept helps students who are preparing to enter a four-year college or university.....	1	2	3
21. The career education concept is useful as a tool to motivate student learning.....	1	2	3

22. The career education concept can be implemented in my school district without outside help..... 1 2 3

23. Initiation of the career education concept will cause unusual changes in the school curriculum..... 1 2 3

24. The career education concept is being implemented in my classes..... 1 2 3

25. Please indicate your sex: __ Female __ Male

26. How many years of educational work-experience in elementary and high school do you have?

    A. One to five years
    B. Six to ten years
    C. Eleven to twenty years
    D. Twenty-one to thirty years
    E. Over thirty years

27. How many years of full-time non-educational work-experience do you have?

    A. 0 to one year
    B. One to five years
    C. Six to ten years
    D. Eleven to twenty years
    E. Over twenty years

28. Circle the sources from which you have received information about the career education concept.

    A. Journals
    B. Films
    C. In-service sessions
    D. Seminars
    E. College courses
    F. Books
    G. Research reports

29. Please circle your teaching classification. (circle as many as apply)

    A. Kindergarten through sixth
    B. Seventh
    C. Eighth
    D. Nineth
    E. Tenth
    F. Eleventh
    G. Twelfth

30. What subject (s) do you teach?

    A. Mathematics, science
    B. English, fine arts, foreign language
    C. Physical education
    D. Practical arts (Ag., Bus., DE, Home Ec., Ind. Ed., Voc., Coop.)

31. List names of people in your community that may be available to teach or speak on certain occupations or occupational clusters.

INDIVIDUAL	ADDRESS	OCCUPATION

32. May these people be listed in an Area III Speakers Directory?

___ Yes ___ No ___ Don't Know

33. Do you feel that counselors provide necessary services and feedback to you concerning students's needs? ___ Yes ___ No ___ Don't Know

34. Does the school have a definite plan for placing students in learning activities, within the school and community, in accordance with individual abilities, interests, and needs? ___ Yes ___ No ___ Don't Know

35. Do you use information available through the guidance services to learn more about the pupils in your classes? ___ Yes ___ No

36. Check the following items that you use for career development in you classes.

___ Audio-video presentations
___ Guest speakers
___ Field trips
___ Photography
___ Career clubs
___ Bulletin boards
___ Simulation games
___ Simulation kits or models
___ Books and newspapers
___ Scrapbooks
___ Interviewing
___ Actual work experience
___ Other _____

_____

37. Your school district is: _____

24. The career education concept can be implemented in my school district without additional funding..... 1 2 3

25. The career education concept is being implemented in my local school district..... 1 2 3

26. If the answer to question number 25 is "Agree" write a brief explanation below of your career education program:

27. If the answer to question number 25 is "Disagree" list below obstacles to implementation of the career education concept:

28. Check the category(s) in each of the three columns listed below that apply to you:

JOB CATEGORY	GRADE LEVEL(S)	SEX
__ Superintendent	__ Elementary (K-6)	__ Female
__ Principal	__ Middle School (7-9)	__ Male
__ Counselor	__ Tenth grade	
	__ Eleventh grade	
	__ Twelfth grade	

29. How many years of educational work experience do you have?

A. One to Five
B. Six to Ten
C. Eleven to Twenty
D. Twenty one to Thirty
E. Over Thirty

30. How many years of non-educational work experience do you have?

A. 0 to One year
B. One to Five years
C. Six to Ten years
D. Eleven to Twenty years

31. I have received career education information from: (circle all that apply)

A. journals
B. films
C. in-service sessions
D. seminars
E. college courses
F. books
G. research reports

32. How many days of in-service training for teachers are scheduled during the school year ? _____

33. How many of these days are devoted to career education in-service? _____

34. What percentage of elementary (k-6) teachers were released for in-service activity other than for regularly scheduled in-service days? _____

35. What percentage of secondary (7-12) teachers were released for in-service activity other than for regularly scheduled in-service days? _____

36. Would classroom or building space be available in your school district for joint vocational or exploratory offerings by your school district in cooperation with another district or districts and/or with Iowa Lakes Community College?

___ Yes ___ No Where _____

_____

_____

37. What subjects do you now offer that usually have slots for additional students?

SUBJECT	CAPACITY	VACANCIES

38. List names of people in your community that may be available to teach or speak on certain occupations or occupational clusters.

INDIVIDUAL	ADDRESS	OCCUPATION

39. May these people be listed in an Area III Speakers' Directory?

___ Yes ___ No ___ Don't Know

40. List educational programs in your school district that should be added to enrich and improve the existing curriculum

_____

_____

_____

41. Your school district is: _____

11. Our school has activities that teach students to appreciate the dignity and value of work..... 1 2 3 4 5 6

12. Our school provides experiences for students to use tools and equipment that are used in various groups of jobs.... 1 2 3 4 5 6

13. Our school helps students match their interests and abilities with the skills that are needed in groups of jobs.. 1 2 3 4 5 6

14. Our school helps students to see that "how I act and what I am" may fit one kind of job more than another kind of job..... 1 2 3 4 5 6

15. Our school has activities showing why certain types of jobs require more education and training than other kinds of jobs..... 1 2 3 4 5 6

16. Our school helps students get the skills that are basic to a single job for which they are planning..... 1 2 3 4 5 6

17. Some students have no interest in school work as now offered in junior and senior high school and they become a problem. Here are some ways that have been proposed for dealing with these students. Will you indicate in the case of each proposal whether or not you approve of it?

a. Permit these students to quit school..... __Yes __No __Don't Know

b. Have businesses and industries provide on-the-job training as a substitute for regular school..... __Yes __No __Don't Know

c. Have special training courses which would prepare them for jobs..... __Yes __No __Don't Know

d. Have a work-study program (½ day at school, ½ day on-the-job training)..... __Yes __No __Don't Know

e. Give school credit for volunteer work during the school day with an approved organization such as a local hospital, day-care center, and the like..... __Yes __No __Don't Know

f. Have separate programs for students with out-of-the ordinary interests and talents..... __Yes __No __Don't Know

State of Iowa
DEPARTMENT OF PUBLIC INSTRUCTION
Career Education Division
Des Moines, Iowa 50319

Dear High School Junior or Senior:

The Career Education Division of the Iowa Department of Public Instruction, in cooperation with your high school, is undertaking a survey to find out your career interests. Knowledge of your interests will help in the planning of future career education programs both at the high school and post-high school level.

Lists of occupations, organized and coded into groups, have been attached for you to review. They are printed on both sides of the attached sheet.

On the form below, please do these things:

1. List two occupations, by code letter and numbers, in which you plan or expect to be employed after completing your schooling.

2. Indicate how sure you are of entering your first choice occupation.

3. Indicate what your immediate plans following high school are expected to be.

When you have finished, please hand in this sheet. You may keep the occupational lists.

STUDENT INTEREST SURVEY

Instructions: After putting appropriate numbers in the top row of boxes, indicate your occupational choices by a letter (major group) and two numbers (specific occupation within group). For occupations numbered 99 (other), write titles on bottom lines. Indicate certainty of first choice and immediate plans after high school with a check (✓) or "X" in the appropriate box. If you have any questions, please ask for assistance.

(1-14) ☐☐ County ☐☐☐☐ District ☐☐☐☐ School ☐☐ Area ☐☐ Grade

Occupational Choices:

(15-17) ☐☐☐ 1st Choice

(18-20) ☐☐☐ 2nd Choice

Certainty of First Choice:
(21)

1 ☐ Very Sure of Decision

2 ☐ Fairly Sure of Decision

3 ☐ Not Sure of Decision

Immediate Plans after High School:
(22)

1 ☐ Full-time Employment

2 ☐ Military Service

3 ☐ Less than 4 year College

4 ☐ 4 Year College/University

5 ☐ None of These

Choices Numbered 99:

_____

AGRICULTURE AND CONSERVATION OCCUPATIONS

A01 General agriculture or conservation worker
A02 General, livestock, or crop farmer
[illegible] Farm manager
[illegible] Feed mill elevator operator
[illegible] Grain and feed products salesman or buyer
A06 Farm implement or garden equipment salesman
A07 Farm equipment mechanic
[illegible] Farm machinery set-up man
[illegible] Animal husbandryman
A10 Poultryman
A11 Seed analyst
[illegible] Agronomist
[illegible] Forester
[illegible] Nurseryman
A15 Landscaper
A16 Groundskeeper
[illegible] Horticulturist or florist
[illegible] Park ranger or foreman
A19 Wildlife gamekeeper
A20 Conservation officer
[illegible] Exterminator
[illegible] Soil conservation aid
[illegible] Extension agent
A24 Veterinarian
A25 Veterinary assistant or technician
[illegible] Other, specify

CONSTRUCTION OCCUPATIONS

[illegible] Construction worker
[illegible] Carpenter
B03 Painter
[illegible] Bricklayer or mason
[illegible] Building contractor
[illegible] Building materials dealer, salesman, or yardsman
Cost estimator
B08 Building inspector
[illegible] Civil engineering technician
[illegible] Earth moving equipment operator
[illegible] Electrician or lineman
B12 Plumber or pipefitter
[illegible] Sheet metal worker
[illegible] Structural steel worker
[illegible] Construction welder
B16 Architect
B17 Architectural draftsman
[illegible] Other, specify

SALES OCCUPATIONS

[illegible] General sales worker
[illegible] Buyer or merchandiser
C03 Industrial sales manager
C04 Retail store manager
[illegible] Advertising assistant
[illegible] Sales or grocery store checker or cashier
C07 Supermarket department head
C08 Clothes and accessories salesperson
[illegible] Fabric and sewing supplies salesperson
[illegible] Home furnishings salesperson
[illegible] Sporting goods salesperson
C12 Lawn and garden supplies salesperson
C13 Hardware salesperson
[illegible] Insurance salesman
[illegible] Real estate salesman
C99 Other, specify

MEDIA, ART, AND ENTERTAINMENT OCCUPATIONS

D01 Designer or entertainer
D02 Journalist
D03 Author or writer
D04 Editor
D05 Publisher
D06 Bookbinder
D07 Print shop foreman
D08 Printing pressman
D09 Typesetter
D10 Photographer
D11 Photographic assistant
D12 Photographic darkroom technician
D13 Fashion or photographer's model
D14 Fashion designer
D15 Displayman
D16 Illustrator or layout man
D17 Sign painter
D18 Artist
D19 Floral designer
D20 Industrial or product designer
D21 Actress or actor
D22 Dramatic or theater artist
D23 Dancer or performer
D24 Drama coach or director
D25 Professional musician or singer
D26 Professional athlete
D27 Radio or TV announcer
D28 Radio or TV program director
D29 Radio or TV control room technician
D30 Radio or TV equipment operator
D31 Radio or TV reporter
D99 Other, specify

MAINTENANCE AND REPAIR OCCUPATIONS

E01 Maintenance and repair worker
E02 Air conditioning or refrigeration mechanic
E03 Industrial maintenance mechanic
E04 Building maintenance man
E05 Electric motor repairman
E06 Electronics mechanic or technician
E07 Radio or TV serviceman
E08 Gas or electric appliance serviceman
E09 Maintenance electrician
E10 Instrument or watch repairman
E11 Musical instrument repairman
E12 Office machine repairman
E13 Repair welder
E99 Other, specify

FOOD SERVICE AND LODGING OCCUPATIONS

F01 Food service or lodging worker
F02 Bellman
F03 Caterer
F04 Cook or baker
F05 Kitchen helper
F06 Kitchen supervisor
F07 Meat cutter or butcher
F08 Food technologist
F09 Restaurant hostess
F10 Restaurant manager
F11 Waiter or waitress
F12 Custodian
F13 Housekeeper
F14 Hotel or motel manager

Project Abstract

Overhead projection equipment is commonly available for classroom use and transparencies are a popular and effective form of instructional media. As in other media forms, transparencies have their limitations. This project was designed to alleviate some of the principal limitations by providing the teacher with an inexpensive, relatively fast means of making transparencies which cover highly specific, unique subject matter contained in a vocational course.

After presentation of a rationale for teacher originated materials and for a selective, analytic process for determining requirements for instructional materials, a technical section is presented. The information there should provide sufficient background to replicate the process. This technical section includes:

a. taking the photograph
b. processing the film
c. making the original print
d. process camera information
e. press work

A final section of this report includes summary statements pertaining to conclusions reached during the project and recommendations for implementation of the process for efficient production and dissemination of the materials.

Rational for the Project

It has been noted by observation and intentional contact with teachers of vocational subjects that overhead transparencies are used extensively as a form of instructional media. Some reasons for this popularity are these:

1. The cost of projection equipment is relatively low so schools often have enough equipment that a projector is conveniently available to most classrooms.
2. Transparencies for special purposes and for special topics can often be made by the teachers.
3. Commercial sources afford reasonbly good access to instructional materials for topics within many courses.
4. Projection equipment is versatile and easy to use. It can be used by the teacher for class presentations; or be made available for use by small groups of students or by individual students. It is compatible with individualized instructional techniques.
5. The projection setting--the room--need not be darkened. In fact, projection equipment is at times used by smaller groups of students either in or adjacent to shop areas instead of the conventional classroom setting.

With these advantages and features which make transparencies a common form of instructional media are some factors or deterrents to use of transparencies. Some of these limiting factors are noted in the following:

1. Although there are commercially prepared transparencies and, in fact, significant series of transparencies, the cost is relatively high.
2. Commercially prepared materials understandibly are made for as wide a market as possible and often are limited to basic rudimentary topics, those "principles" least likely to change, leaving a large void, in the specific, changing topics, which are vital to vocational programs.
3. Content which must be constantly updated with current information (e.g. new processes, modified equipment, changed techniques, and technical information), presents an acquisition problem to the teacher.
4. Teachers have neither the time nor the resources to analytically select or construct instructional materials by the prescriptive process advocated for the development of highly functional media.

Because of the restrictions mentioned, teachers either do not use sufficient instructional devices or they select opportune but not necessarily effective materials. Another choice is,

with the limitations present, to construct very crude materials which can be done quickly with the resources at hand but which are not very effective as a teaching device. Preparation of transparencies, for instance, often requires the services of a person with the talent of a commercial artist. Such talent is seldom available.

The photographic process described in this report is not a complete panacea but does provide a method of acquiring transparencies for which a need is recognized. By intentional design, the subject can be identified, prepared for original photograph, and a highly detailed master (for reproduction) made by a relatively simple, quick, inexpensive process.

Technical Description of Photographic and Duplication Process

This section is intended to be a guide for those with some graphics and/or Audio Visual background which will enable them to replicate the process.

Specific reference will be made to commercial products which, in our experience, have proved to be satisfactory. This is in no way intended as endorsement or recommendation of a specific brand or source of commercial product. All products specified in this report are intended to indicate a type or grade of product and the term "or equivalent", (although not stated for writing simplicity) is understood to be implicit in the references to products used.

<u>Camera</u> There are relatively few comments and instructions

necessary for shooting the photo originals. Techniques, for those acquainted with a variety of photographic work, are most similar to press photography. Film processing and printing should produce a sharply detailed, high contrast print.

Some of the guidelines for shooting the original photo are noted in the following. Best results have been obtained by use of a 4 x 5 press camera. Satisfactory results were achieved with a medium format press camera or a twin lens reflex camera producing 2 1/4" x 3 1/4" and 2 1/4" square negatives. Good sharp 35 mm negatives, particularly when the subject matter has a limited area and can be shot in close, have also produced satisfactory originals.

Most of the small format experience has been with a 35 mm single lens reflex, however, some photos taken with simpler equipment like an Instamatic have been quite adequate. If available, the larger press camera or medium format cameras are recommended because there is more negative for ease in cropping and composing the final print.

All film was shot as near a normal exposure as possible. Flash, floodlights and available light have all been used. With artificial light (flash or flood) it may be necessary to consider back lighting or some means of providing neutral background which has medium reflectivity. The condition to avoid is a "black" background in the print. This dark background may be desirable for some photographic purposes but not for this process. In the printed transparency, it is necessary for a high value of light to be transmitted

through the image. Also, a large area of dense black in the original print will eventually result in large areas of ink on the printed form which causes severe press problems.

Available light has been used successfully, however, a general caution is to be sure the available light level is high enough and sufficiently balanced to produce high contrast results in the print.

Any form of lightning chosen should be compatbile with the depth of field provision which is necessary. Generally, a limited area or an object in an area is chosen as the subject, so a minimum depth of field is most often desirable in order that the subject be in sharp focus while the background is out of focus and is as indistinct as possible.

Films and Processing Film types were limited to Kodak Plus X, Tri X and a small quantity of Royal Pan sheet film. Plus X and Tri X were used in the 35 mm camera and the Tri X in the medium format cameras. It was found through experience that grain in the print, normally objectionable in photography, was not a consideration in this process. Although it was not experienced, it is anticipated that extreme grain in a print may cause some loss of resolution of fine detail in the transparency.

Processing was accomplished in normal conditions, that is, the temperature and time of development followed the recommendations for the specific film/developer combinations which were used.

Three developers were used with all the film types

mentioned. Kodak D76; a one-to-one solution, was found to be satisfactory resulting in a near "average" negative in which the shadow detail is rather well pronounced. Presence of shadow detail may, for some subjects, be desirable, but for others, be objectionable. Shadow detail does produce a slightly "softer" projected image in the resulting transparency and seems to produce more of a third dimension-depth in the projected image.

A second developer, used primarily with the 35 mm film, is Kodak Microdol-X. This is recommended with reservations. It will produce reasonable results, however, the negative lacks a desirable degree of contrast and there is less lattitude in the rest of the processing.

Kodak D-11 is a high contrast developer, also satisfactory for the process. It could be recommended for those instances where it is desirable to have very little or no shadow detail. The resulting print (printed on 2 or 3 grade paper) will have extreme contrast, little or no shadow detail and appear to have a "flat", two-dimensional image. D-11 is recommended as the best single developer for all film types for the majority of transparencies because the reproduction of detail obtained with this developer is the one feature found to be common to reproduction of transparencies.

<u>The Original Photo Print</u> Earlier reference to the print indicated that high contrast is desirable, so most prints were made on 3 or 4 grade papers. If the negative is sharp and composition has provided for good contrast

in the subject, control of the rest of the results can be exercised through control of the print contrast. Shadow detail, or the intentional elimination of it, can best be judged by comparison of the original photo with the projected image of the transparency. One note of caution should be mentioned. Do not try to compare or make an analysis of the printed image on the transparency as would be the case if the image were printed on an opaque paper. The only way an accurate appraisal can be made is to project the transparency.

The only remaining consideration regarding the original print is that the print size be proportioned to the image size of the transparency, which in this project was 8" x 10". Actual print size is not significant since the process camera is used to enlarge or reduce the original to the desired image size.

Process Camera This process to produce transparencies causes very little change in standard camera work. The primary difference to remember as a control factor is that the printed matter will be seen as a projection. Light must pass through the transparent stock in those portions of the stock not masked by an opaque ink. Dot pattern and dot size in the half-tone negative roughly represents the amount of light masking as compared with the light transmitting areas on the finished transparency. Persons who are printers deal primarily with circumstances where the image is printed on opaque stock (paper) and the ink on the paper is the basis of inspection and evaluation of a

properly printed image. This process requires a complete reversal of value judgment on the part of the printer because the light through the stock is what constitutes the projection image.

The major change in camera technique is directly related to the above description. An 85-line gray screen is recommended as the basic screen for exposure of the half-tone negative. This equipment will assist in limiting shadow detail and contributing to the required contrast of the projected image.

For comparison, a 50-line screen was tried and found to be too "open", resulting in a loss of fine detail. Additional exposures were made with a 110-line magenta screen and this was found to be satisfactory particularly when shadow detail was desirable in the transparency and when extremely fine detail was present in the subject being processed. Experience indicates, however, that a 110-line screen will cause a sharp drop in the light transmitting ability of the printed matter with a resulting loss of the necessary contrast, so an 85-line screen is preferable.

Basic exposure will probably vary with different equipment and facilities but for reference, the following information represents the practice followed for this project.

Film: - Ansco Reproline and Kodak Type 3

Main Exposure: 40 seconds

Flash: 5 seconds with an O filter at 4 feet

Presswork Standard plates - 3M "E" plates and "R" plates were used on Addressograph Multigraph 1050 presses. No special press adjustment is necessary, however, it is recommended that the dampening system be run at a minimum level. Just enough fountain solution present to prevent "scumming" is the recommended procedure.

Ink which was found to be most satisfactory was Van Son Rubber Base Plus. Several other inks were tried but were found to have major limitations. An I.P.I. ink identified as a "special ink for acetate" provided very good drying but did not have sufficient density or opaqueness to provide contrast. Von Son "Big M" is not recommended because of poor drying quality. It was assumed from this experience (and recommendations from suppliers) that rubber-based inks are generally the most satisfactory types.

Two kinds of stock were used to print transparencies. The first was an acetate sheet, three mil thickness. It was satisfactory,. however, some difficulty was experienced in feeding and delivery through the press. Press speed was varied and the ink distribution system adjusted to correct feed problems. All stock was purchased inter-leaved with paper stock. This is recommended even though the expense is slightly higher because press adjustments are made on the impressions on the alternate paper interleaf rather than on the transparency stock. It is very difficult to check the impression on the clear stock during a press run. Also, the interleaf sheets help eliminate offsetting in

the delivered stack.

A second type of stock used was a three mil mylar. It is more expensive, however, it is easier to feed through a press and as a finished transparency seems to lie flat on the projector without the curl or buckling experienced with some acetate sheets.

Offsetting immediately after printing is a characteristic of the process which must be guarded against. As noted previously, interleafing with paper stock relieved the problem somewhat, but it was found that press lifts of approximately 100 impressions should be carefully taken from the delivery, then these lifts stacked separately and allowed to dry for 12 hours prior to further handling.

Evaluation of the Process

This method of producing transparencies is sufficiently close to standard practice in both the photography and printing that it can be accomplished with very little expense for special equipment. Individual transparencies printed in runs of 100 are well below the cost of other methods. The process does, however, assume that transparencies made for one vocational class will have value elsewhere in similar courses, thus, the process is predicated on an exchange of materials between schools or dissemination of transparencies to schools through some central clearinghouse.

After explanation of the process, several teachers have used camera equipment not previously familiar to them to shoot a series of photos. These were later processed

into transparencies with very satisfactory results, so apparently teachers are capable of originating the required input. There was no reported problem with the original photographs. They were shot quickly during regular class activity without causing interruption.

Conclusions and Recommendations

The principal difficulties experienced in this project was that of "selling" the idea of teacher prepared materials and then explaining the relationship between selection of topic and the appropriateness of transparencies as the form of media which would effectively illustrate the topic. Many ideas were suggested which were in no way compatible to the use of transparencies. It is therefore surmised that much work needs to be done with teachers in selecting media forms which will efficiently aid the instructional process.

Because of this experience and other contact with teachers, it is suggested that coordination of the input is an essential ingredient for any system for production of transparencies.

The following recommendations are offered as points to consider in establishing a system of production using this technique.

1. Establish one facility as a clearinghouse for receiving and coordinating the input and dissemination. Several other facilities could perform the production.

2. Assign a person or persons acquainted with the process and having some experience with vocational curriculum to act as a catalyst and coordinator in obtaining input.
3. Establish a cross-reference system of recording materials available and a periodic announcement of availability.

These administrative features should provide a functional system of acquisition, production and dissemination to support implemenation of the process.

TITLE: A HISTORICAL AND CURRENT FOLLOW-UP STUDY OF OKLAHOMA VOCATIONAL-TECHNICAL GRADUATES.

PERSONAL AUTHOR: MORTON, J.R.; AND OTHERS

DESCRIPTOR: *FOLLOWUP STUDIES; *VOCATIONAL FOLLOWUP; *GRADUATE SURVEYS; *TABLES (DATA); SECONDARY EDUCATION; POST SECONDARY EDUCATION

IDENTIFIER: *OKLAHOMA; OTIS; OCCUPATIONAL TRAINING INFORMATION SYSTEM

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 119P.

ABSTRACT: THE DOCUMENT PRESENTS THE RESULTS OF FOLLOWUP SURVEYS OF SECONDARY AND POSTSECONDARY GRADUATES FROM VOCATIONAL-TECHNICAL PROGRAMS FOR THE YEARS 1970-1975, INCLUSIVELY. THE POSTTRAINING EXPERIENCES THE FIRST, THIRD, AND FIFTH YEAR AFTER COMPLETING THE TRAINING PROGRAM ARE REPORTED. THE FOLLOWUP INFORMATION IS PRESENTED IN TWO SERIES OF TABLES: (1) FOR EACH PROGRAM AND (2) FOR EACH SCHOOL, BY PROGRAM, FOR 1974-75 ONLY. (AUTHOR/RG)

CHAPTER I

BACKGROUND AND PROCEDURES

Introduction

The Oklahoma State Department of Vocational and Technical Education provides support for training for the purpose of providing students with the knowledge and skills necessary to enter and succeed in the world of work. It is necessary to examine the post-training experiences to get information for program evaluation, federal reports, and manpower support data for the Occupational Training Information System (OTIS).

The Oklahoma State Department of Vocational and Technical Education has been conducting follow-up surveys on individual students since 1965; however, follow-up information was not standardized until 1969. This report presents the findings of the surveys from 1970 to 1975.

Purpose of the Study

The purpose of this study is to answer the question, "What has been the post-training experience of vocational-technical graduates the first, third, and fifth year after completing the training program?"

Limitations

The report is limited by the following factors:

1. Comprehensive Home Economics, Coordinated Vocational Training and Education, and Pre-Vocational Orientation are not included in this report. The purpose of these programs does not include preparing students to enter the labor force as one of their major objectives.

2. Follow-up data on adult students, CETA students, and special schools students are not included in the report because the data is either not available or is published in other documents.

This report does include follow-up of secondary and post-secondary graduates from vocational-technical programs for the years 1970 to 1975 inclusively.

The Follow-Up Procedure

A three-report student accounting system was developed in 1970-71 and revised in 1973-74 to a one-entry system including the following reports to be submitted by the teacher.

1. The student enrollment form to be filled out for all new students in each vocational program.

2. The student status report, a computer printout of last year's students, to be updated with follow-up information or perpetuated enrollment data.

3. The student follow-up report to be completed on students who graduated or completed the program three and five years ago.

CHAPTER II

SURVEY RESULTS

Introduction

This chapter presents the results of the survey described in Chapter I. Table I indicates the relationship of last year's graduates to graduates employed full-time and graduates employed in jobs related to training by divisions. Table II shows the first year follow-up information by occupational objective and divisional first, third, and fifth year follow-up information. Table III is a listing by program and division of the 1974-75 follow-up information for each school.

Explanation of Terms and Tables

Number of students with marketable skills--refers to those vocational-technical graduates or who completed the training program or who dropped out of the program and are employed in the occupation for which they were trained.

Available for the labor force--refers to those vocational-technical graduates who are employed in a related field, employed in an unrelated field, employed part time, and unemployed.

Employed related--refers to those vocational-technical graduates or dropouts who are employed full time in an occupation that is the same as, or closely related to, the occupation for which the training program is designed.

Employed unrelated--refers to those vocational-technical graduates who are employed full time in an occupation that is not closely related to the occupation for which the training program is designed.

Employed part time--refers to those vocational-technical graduates who are currently employed on a part-time basis and not in school full time regardless of whether the particular job they are engaged in is related or unrelated to training.

Unemployed--refers to those vocational-technical graduates who are unemployed and seeking employment.

School related--refers to those vocational-technical graduates who have returned to school full time and are engaged in course work or a program of study related to the training they received from their particular vocational-technical program.

School unrelated--refers to those vocational-technical graduates who have returned to school full time and are engaged in course work or a program of study unrelated to the training they received from their particular vocational-technical program.

Armed forces--refers to those vocational-technical graduates who are serving in the Armed Forces. The 1973-75 data considers voluntary service in the Armed Forces as employment and may be either related or unrelated.

Not in labor force--refers to those vocational-technical graduates who are not in the labor force; that is, those not gainfully employed or seeking employment.

Unknown--refers to those vocational-technical graduates or dropouts that the survey respondents (i.e. teachers) were unable to place in any of the other eight categories defined above due to insufficient information. Prior to 1973-74, unknowns represented only students who had completed the training program; subsequent data reflects both completers and dropouts in the unknown category.

Table I of this study is a bar graph presenting the relation of graduates to graduates employed full time and graduates employed in jobs related to training by divisions. This information pertains to 1974-75 graduates and includes those dropouts who are employed in the field for which they were trained.

Table II of this study presents first year follow-up on the 1970-71, 1971-72, 1972-73, 1973-74, and 1974-75 graduates by each program. It presents, by division, first year follow-up information for the years 1967-68, 1968-69, 1969-70, 1970-71, 1971-72, 1972-73, 1973-74, and 1974-75. Third year follow-up by division is given for 1968-69, 1969-70, 1970-71, 1971-72, and 1972-73. Fifth year follow-up information is given for 1968-69, 1969-70, and 1970-71. If, in the report by program, there is no follow-up data available on a program for a particular year, the percentages for that year in that program will be zero. If the total number of follow-up responses for a program in a particular year is less than 30, an asterisk is printed by the year.

Table III of this study presents first year follow-up information by program on each school in the state. This information is reported on the 1974-75 graduates in raw numbers. The user may readily make percentage calculations if they are needed. A summary of the follow-up data is given both for the programs and for each division. The table has been divided to reflect secondary, post-secondary, and full-time adult status.

TITLE: A DIGEST OF THE EVALUATION OF COORDINATED VOCATIONAL ACADEMIC EDUCATION IN TEXAS.

DESCRIPTOR: *EDUCATIONAL ALTERNATIVES; *VOCATIONAL EDUCATION; *PROGRAM EVALUATION; *SCHOOL SURVEYS; SECONDARY EDUCATION; PROGRAM EFFECTIVENESS; *DISADVANTAGED YOUTH

IDENTIFIER: COORDINATED VOCATIONAL ACADEMIC EDUCATION; CVAE; TEXAS

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 11P.

ABSTRACT: THIS STUDY WAS CONDUCTED TO DETERMINE IF THE GOALS AND OBJECTIVES OF THE COORDINATED VOCATIONAL ACADEMIC EDUCATION (CVAE) PROGRAM IN TEXAS WERE BEING MET. QUESTIONNAIRES WERE DEVELOPED AND ADMINISTERED TO ADMINISTRATIVE SUPERVISORS, VOCATIONAL AND ACADEMIC TEACHERS, AND PRESENT AND FORMER STUDENTS IN 381 SCHOOLS. FROM THE INFORMATION RECEIVED, MOST VOCATIONAL PROGRAMS WERE FOUND TO BE SUCCESSFUL, WHILE 35 PERCENT OF THE ACADEMIC PROGRAMS INDICATED SUCCESS, AND 33 PERCENT INDICATED PROGRESS AND IMPROVEMENT. ALSO INCLUDED IN THE REPORT IS ADDITIONAL INFORMATION BEARING ON THE SUCCESS OR FAILURE OF THE PROGRAM, SUCH AS THE METHOD OF SELECTION OF COURSES, THE ADEQUACY OF FACILITIES, SUPERVISION, TEACHER PREPARATION, STUDENT INTEREST, STUDENT SEGREGATION, AND CURRICULUM. WHEN COMPARED TO STUDENT PERFORMANCE BEFORE ENROLLMENT, ABSENTEEISM, SUSPENSIONS, AND DISCIPLINE PROBLEMS SHOWED A MARKED DECREASE. CVAE TEACHERS REPORTED THAT 97 PERCENT OF THE VOCATIONAL TEACHERS AND 86 PERCENT OF THE ACADEMIC TEACHERS FELT THAT THE PROGRAM WAS EFFECTIVE. LESS SUCCESS WAS ACHIEVED BY THE ACADEMIC PHASE DUE TO LACK OF TRAINING FOR ACADEMIC TEACHERS, LARGE CLASSES, AND UNFAVORABLE ATTITUDES OF STUDENTS AND TEACHERS. ALTHOUGH STIGMA WAS A MAJOR DETRIMENT IN SOME SCHOOLS, IT WAS NOT FOUND WHERE CVAE STUDENTS REMAINED AN INTEGRAL PART OF THE STUDENT BODY. ALL FORMER STUDENTS RETURNING QUESTIONNAIRES WOULD ADVISE HIGH SCHOOL STUDENTS TO ENTER THE CVAE PROGRAM. (NJ)

A digest of a study
for the evaluation of
Coordinated Vocational Academic
Education in Texas

The study was conducted
by Mrs. Vonda June Prestom,
Paris Junior College, under
contract with the Department
of Occupational Education
and Technology, Texas
Education Agency.

This digest was completed at the
request of the Texas Education
Agency by Ira Nell Truman,
C.V.A.E. Teacher Education Project,
East Texas State University

SYNTHESIS OF COORDINATED

VOCATIONAL ACADEMIC EDUCATION IN TEXAS

Coordinated Vocational Academic Education in Texas has been in effect for six years with a growing number of schools in the program to indicate the program is a success. However, due to the fact that no formal research was available to determine the strengths and weaknesses of the CVAE Program, the Texas Education Agency approved a grant and contracted with Paris Junior College for a research study of the present CVAE Program in Texas. The primary purpose of this study was to determine if the goals and objectives for which CVAE was established were being met.

Coordinated Vocational Academic Education is a combination of vocational and academic instruction for the student who is not succeeding in the traditional program due to academic, socio-economic, or other handicaps. The vocational courses provide instruction to prepare students for jobs requiring semi-skilled knowledge and training; the academic courses provide instruction to meet the needs of the students and to provide practical application to the vocational courses.

Two studies were conducted. Questionnaires were developed for CVAE administrative supervisors, CVAE vocational and academic teachers, and present and former CVAE students. The first study was done to field test the research instruments and was used in 29 schools. The sample study and personal interviews formed a basis for evaluation and revision for the second study which included the 381 schools or 195 school districts which operated CVAE schools in Texas during the 1971-1972 school year. The questionnaires included reply envelopes which provided for each to be returned individually by the administrators and teachers. The student questionnaires were distributed during personal visitation. A large percentage of the personnel involved in the teaching or supervising of CVAE programs returned data for this study.

Due to the fact that teachers of failing programs are not as willing to return questionnaires as are teachers of successful programs, all conclusions drawn from the comparison of successful to failing programs are based on inconclusive data. Further research is needed in this area. However, from the information received, most vocational programs were found to be successful while 35 percent of the academic programs indicated failure, 32 percent indicated success, and 33 indicated progress and improvement.

The selection of clusters for CVAE programs in indivudual schools was determined by three methods: an occupational survey to determine the job market in the local area, administrative personal judgment, and recommendations of advisory councils. Personal interviews with administrators revealed that students have a greater tendency to drop out of school at the junior high school level. The 16 year old student who is two years behind his grade level is not likely to continue a traditional academic program. For this reason, most school systems introduce the CVAE program at the junior high level and feel a need for additional CVAE units at the high school level to continue the program beyond the junior high school level to regular high school vocational courses or CVAE Cooperative Part-time Programs. However, most administrators and academic teachers see a need to have more CVAE units in the junior high level and meet the needs of these students before expanding to the upper grades.

A large percentage of the administrators say they have 15 percent or more of their students eligible but not enrolled for CVAE. Administrators more than teachers realize the need for additional CVAE units. The industrial area is the primary area needing additional units according to the academic teachers. Industrial, homemaking, and cooperative are most often mentioned by administrators and teachers as needing additional units. CVAE personnel feel additional clusters should be added to the Texas Education Agency Approved List for additional programs for girls and for paint and body repair. Yet,

most administrators and vocational teachers feel most existing clusters do represent area job demands and most students say they are interested in obtaining a job in the field which they are studying in CVAE. More than half the clusters in current programs are mechanical repair, construction trades, and home and community services.

Lack of facilities is the major problem mentioned by administrators for not adding CVAE programs. Sixty-nine percent of the administrators gave this reason for not expanding. Most CVAE facilities and equipment meet the standards required by Texas Education Agency. The feasibility of CVAE using regular vocational facilities is equally divided in the opinion of administrators. The questionnaire data which revealed there is little isolation of CVAE students from the total student body was contradictory to visitation findings which indicated isolation of academic classrooms has a direct relationship to CVAE stigma.

Supervision is usually performed by school principals. According to questionnaires returned from administrators and to visitation, school principals are usually the supervisors of local school CVAE programs. Of the questionnaires returned from supervisors of CVAE programs, 53 percent were from principals or assistant principals. Although vocational director/administrators were on the staff of 70 percent of the responding schools, questionnaires were completed by only 26 percent of them as direct supervisors of CVAE. The remaining were completed by vocational counselors and other members of the school staff. One individual usually supervises both academic and vocational areas of CVAE. When there is a division in the supervision, the principal usually supervises the academic phase and the vocational director usually supervises the vocational phase.

While the teachers do not agree with the figures above as to principals usually being the supervisors of CVAE programs, all questionnaires agree that all vocational classes receive more supervisory visits than academic classes. Failing academic programs showed still fewer supervisory visits than successful academic programs. Lack of interest and concern of the administrator has a

direct relationship to CVAE failure. Administrators and vocational and academic teachers returned questionnaires indicating need of assistance from experienced personnel in developing instructional materials for CVAE and a state CVAE vocational and academic specialist to assist local programs.

The dissimilarities of vocational and academic teachers may be factors in the success or failure of the CVAE program. The vocational program was more successful than the academic program according to the findings of the administrators, CVAE teachers, and visiting team. The lack of academic teachers with training for teaching CVAE students was mentioned twice as often as any other problem in faculty selection. The state requirement for vocational teacher training adds to the wide difference of training between the academic teacher and the vocational teacher. More than half of the academic teachers feel they need additional training in areas of teaching methods, instructional materials, instructional aids for the students and training in student relationships and motivation. Vocational and academic teachers want additional training to be offered through area in-service training and summer college courses and feel a need for coordination of academic and vocational phases of CVAE.

The CVAE students' interest in vocational classes is most often the primary reason for his selection to the program. A large percentage of the students continue to prefer the vocational classes. Principals, counselors, and CVAE teachers with help from regular academic teachers usually identify, screen, and select students for the CVAE programs. Academic failure is most often the deciding factor in selection. Interviews and achievement testing are used in the decision.

There is little feeling of segregation on the part of the CVAE student. In fact, one proof of favorable attitude toward vocational classes is reflected by teachers' feelings that CVAE students feel segregated less often in vocational classes than in academic classes. Sixty-six percent of the

administrators report they have students returning to regular programs before completing CVAE classes due to the students' improved achievement levels. Vocational teachers see greater improvement in their students than the academic teachers see in their CVAE students. They agree that self-confidence and pride are the areas of greatest improvement.

Course offerings at the individual local level differ greatly. The local school personnel is responsible for the decision of how the classroom meets the needs of the CVAE students. The methods of achieving these goals vary from district to district, school to school, and teacher to teacher. Modified academic classes in English, mathematics, science, and social studies are offered for CVAE students. However, few CVAE students are enrolled in elective courses with mainstream students. Few elective courses, other than physical education are offered to CVAE students.

Vocational and academic teachers develop their own course outlines. Ninety percent of the academic teachers and 66 percent of the vocational teachers expressed a need for assistance in developing the outlines. The greatest need expressed was for definite curriculum guidelines with realistic goals. It was felt by many teachers and administrators that more coordination between vocational and academic courses is needed. Credit toward high school graduation is received for CVAE courses, although many schools do not offer enough CVAE courses to fulfill graduation requirements.

Since CVAE students are often absent and have a history of academic failure, the influence of CVAE can be noted by a change in absenteeism, academic failure, disciplinary problems and school dropouts. This study did a comparison of students before and since their enrollment in CVAE in regards to absenteeism, academic failure, disciplinary problems and dropouts. It further did a study between regular and CVAE students. When CVAE students are compared to their performance before enrolling in CVAE, the improvement is impressive:

- 2½ percent decrease in dropouts

- 11 percent decrease in absenteeism
- 36 percent decrease in suspensions
- 41 percent decrease in discipline problems

However, many teachers have found chronic absentees, undisciplined or apathetic students, and severe emotional problem students do not benefit from CVAE programs.

CVAE teachers report that 97 percent of the vocational teachers and 86 percent of the academic teachers feel that the CVAE program is effective in their school. Adequate or good community support is reported by a majority of the administrators. The most common means of promoting CVAE in a local area is through the informative programs to PTA, civic clubs, and community groups and letters to parents. News media in the community and local businesses often lend support.

Initial prejudice against the vocational phase of CVAE is eliminated by job interest, the lack of previous experience, and the break from traditional education. The stigma attached to the academic phase of CVAE is due to previous academic failure, low intellectual level of many selected students, and deprivation of elective courses and extra-curricular activities. Less success has been achieved by the academic phase of CVAE due to lack of CVAE training for academic teachers, large classes, difficulty in obtaining appropriate teachers' materials, as well as due to the unfavorable attitudes of teachers and students toward the academic phase.

Many schools have never encountered stigma, while in others stigma attachment is a major detriment to the CVAE program. Stigma is seldom found in programs where CVAE students attend modified CVAE academic classes and have daily contact with regular students through physical education, elective courses, and sports. When CVAE students remain an integral part of the total student body, no stigma is found. Evidence of CVAE success and program acceptance was found when mainstream students requested enrollment in CVAE courses. When

students see a product made by a CVAE student whose skill exceeds that of regular students, CVAE becomes a prestige involvement. Community use or display increases the respect and pride for the student. Another means of stigma deterrent is the development of leadership among CVAE students. Schools can further prevent stigma attachment by recognition of CVAE participation in area and state industrial fairs, display of awards, and honor rolls.

All former students returning questionnaires would advise high school students to enter CVAE. Their reasons are opportunity for job improvement, development of a better attitude toward school and respect for an occupation, and expansion of learning beyond that of regular classes. The students felt personal improvements in appearance, getting along with others, and more interest in and better understanding of school were results of CVAE.

COORDINATED VOCATIONAL ACADEMIC

EDUCATION CURRICULUM PREPARATION

AND TEACHER EDUCATION

Several years ago the State of Texas began its implementation of Coordinated Vocational Academic Education programs for disadvantaged students in the secondary schools. Since that time, an impressive number of programs have been established. The success in terms of keeping students in school to graduation, giving them valuable vocational training, and providing them with necessary income while they are in school can be validated in all parts of the State.

However, there is still a lack of coordination in aspects of the program and several needs have not been addressed. Therefore, the Texas Education Agency approved a project entitled Coordination of Coordinated Vocational Academic Education Curriculum Preparation and Teacher Education which was awarded to East Texas State University from September, 1973 to July, 1975. The priority area addressed in this proposal is for educational disadvantaged students in CVAE through the coordination of teacher education and curriculum development.

The objectives for this two-year project are as follows:

- to provide leadership and liaison for the developing of curriculum guides in the subject areas of mathematics, science, social studies, and English, utilizing existing materials and developing additional methods and materials for CVAE programs.
- to develop a comprehensive teacher education program for teachers in CVAE programs.
- to implement in-service program utilizing and piloting the modules mentioned in Objective two.
- to make available a network of professional staff development

centers, including the training of a corps of master teachers.

- to develop a model for curriculum development incorporating sound and current notions of inquiry, concept development, multi-cultural education, and relating academic concepts to the realities of work and everyday behavior.

One can conclude that the scope of this project should serve to meet the needs pointed out in the Paris Junior College report in that within two years:

- teachers would have curriculum guides and suggested materials to guide them,
- a supervisory staff capable of assisting academic teachers would be developed, and
- academic teachers in CVAE programs would have a source of in-service (and pre-service) education to help them meet the needs of their students.

DESCRIPTIVE NOTE: 57P.

ABSTRACT: FUNDING POLICY FOR APPRENTICESHIP-RELATED INSTRUCTION IN THE TEXAS PUBLIC SCHOOLS WAS CHANGED IN 1973 TO PROVIDE MORE EQUITABLE DISTRIBUTION BETWEEN STATE AND LOCAL MONIES THROUGH USE OF A CONTRACT HOUR FORMULA BASIS. TO PROVIDE GUIDELINES FOR ANY ADJUSTMENTS IN FUTURE FUNDING PATTERNS, THE TEXAS ENGINEERING EXTENSION SERVICE OF THE TEXAS A&M UNIVERSITY CONDUCTED A STUDY TO DETERMINE THE PRIVATE SECTOR'S ASSESSMENT OF THE NEW FUNDING BASIS AND ANY NEEDED CHANGES. DATA WERE COLLECTED THROUGH INTERVIEWS AND QUESTIONNAIRES FOR LOCAL APPRENTICESHIP PROGRAMS WITH RELATED INSTRUCTION PROGRAMS IN COOPERATION WITH LOCAL PUBLIC SCHOOLS. FINDINGS INDICATED THAT THE NEW FUNDING POLICY WAS APPROVED BY NEARLY EVERYONE CONCERNED WITH THE PROGRAMS. THE QUESTION, RESPONSES, AND SUMMARIZED PROGRAM EXPENDITURES ARE APPENDED. THE REPORT CONCLUDES THAT EXPENDITURES BY THE LOCAL JOINT APPRENTICESHIP COMMITTEES WERE A MAJOR CONTRIBUTION TO THE QUALITY OF THE PROGRAMS. RECOMMENDATIONS FOR FURTHER MODIFICATIONS IN THE STATE FUNDING POLICY AND IN PROGRAM STANDARDS ARE PRESENTED. (MF)

BACKGROUND AND PURPOSE OF THE STUDY

For a number of years, apprenticeship related instruction in the public schools was not only inadequately funded (in relation to total expenditures) but was also inequitably funded when compared to the contact hour reimbursement method used in the post-secondary institutions. In addition to State monies allowed for apprenticeship related instruction, the Local Joint Apprenticeship Committees (JAC) were called upon to provide supplementary funds to meet necessary expenditures. In many cases, these supplementary funds provided by the JAC are in addition to tuition charged to the apprentices. The Apprenticeship Related Instruction Cost Study (1972) found that the ratio of participation was 12 percent State monies and 88 percent local monies. As a result of a new funding policy adopted by the Texas Education Agency in 1973, financing of apprentice training related instruction has been more equitably distributed; and a greater utilization of apprenticeship related instruction has been encouraged.

In February of 1973, The State Board of Education accepted the concept of a contact hour formula basis for funding apprenticeship related instruction classes without regard to the type of sponsoring institution. In the public schools, this was a major change in funding, which was previously based on a percentage reimbursement of the instructor's salary up to a maximum amount. In some cases a portion of supervisory costs were also reimbursed. In addition to instructor's salary and supervision, allowable expense items under the new reimbursement policy also include clerical costs, operating expenses, janitorial

costs, and lighting and heating.

In this same meeting, The State Board also accepted the report mentioned above, (Apprenticeship Related Instruction Cost Study), which included a number of recommendations reads in part: "that an apprenticeship training advisory committee (ATAC) be established which would be representative of education, labor, management, and public who are presently involved in apprenticeship training . . ." (This committee was appointed March 10, 1973, and is now functioning). This recommendation further suggests: "Also, ATAC should determine which expenses would be reimbursible under the student contact hour basis of funding after further study." A problem arose in ensuring adequate analysis and input from the private sector and program sponsors with regard to needed adjustments and guidelines on future funding patterns.

The Texas Engineering Extension Service has maintained contact with apprenticeship program sponsors throughout the State. This line of communication was utilized to obtain data and an analysis of the needs of this important segment of the educational delivery system. It is expected that results of this project will:

1. Aid the Texas Education Agency (TEA) in making needed adjustments in the funding of apprenticeship related instruction programs.

2. Provide information to the Apprenticeship Training Advisory Committee to assist the committee in formulative recommendations to TEA.

3. Supply information to apprentice training specialists for use in advising local program operators on TEA policies.

4. Supply information to TEA and apprentice training specialists to be used by local schools and apprentice program sponsors in determining optimum size of classes.

OBJECTIVES

The specific objectives of the study were to:

1. Determine private sector assessment of the adequacy of the new basis for funding apprenticeship related instruction classes in the public schools.

2. Identify capabilities of the private sector funding program which should be considered in establishing future contracting, reporting, and auditing procedures.

3. Make recommendations, if needed, for possible adjustment in future funding plans.

PROCEDURE

The need for possible adjustments in funding of apprentice programs was discussed through contact with sponsors (JAC and coordinators) of local apprentice training programs. The data were collected through personal and telephone interviews and through questionnaires. In most instances, an interview checklist was completed by the interviewer for local apprenticeship programs which conduct related instruction programs in cooperation with local public schools. Some r spondents supplied information by completing the forms themselves and returning them.

The study followed the sequence of events listed below:

1. An interview checklist was developed and refined to elicit information on related instruction expenditures borne by local program sponsors (See Appendix I) and to determine reaction of local sponsors to the new funding procedure.

2. An overview of the project was presented to the annual meeting of the Apprenticeship and Training Association of Texas at the 1974 meeting of this organization to obtain an understanding of the study by the membership and support for assistance in gathering the data.

3. Arrangements were made for interviews, which were conducted as program sponsors were available.

4. For various reasons, numerous program sponsors were not available for personal interviews. Efforts were made, with some degree of success, to reach these individuals through telephone interviews or interview checklists distributed to them to serve as a survey questionnaire.

5. The U. S. Department of Labor, Bureau of Apprenticeship and Training, was consulted as need arose.

6. Close liaison was maintained with The Department of Occupational Education and Technology, Division of Public School Occupational Programs (Industrial) of the Texas Education Agency.

7. Responses were analyzed, and results are tabulated in Appendices II and III.

8. Recommendations were formulated on the basis of the interviews and the data obtained.

FINDINGS OF THE STUDY

The results which the study was expected to produce are briefly summarized as follows:

1. To determine the private sector assessment of the adequacy of the new basis for funding.

2. To identify the capabilities of the private sector funding program

which should be considered in establishing future contracting, reporting, and auditing procedures.

3. To provide a report which reflects the results of the study and which will have practical value to the Advisory Council for Technical-Vocational Education in Texas.

In general, the first result summarized above appears to have been successfully achieved. For the most part, those who participated in the study were quite helpful in providing an assessment of the new funding procedure. Less success was met in identifying (in objective terms) the capabilities of the private sector funding program.

Apprenticeship related instruction is funded by the Texas Education Agency in 20 independent school districts of the State. Partial or complete responses were obtained from 13 of these districts. This constituted a sampling of 65 percent of the funded school districts. The participating districts provide related instruction for 73 apprenticeship programs. Of these, complete or partial returns were obtained from 26 for a sampling of 36 percent. Apprenticeship programs which provided data in this study enroll a total of 1355 apprentices. This constitutes 38 percent of the total number of apprentices (3585) who receive related instruction through the public schools. Totals for the number of school districts which conduct apprenticeship related classes, programs being funded, and apprentices enrolled, are computed as accurately as data available at time of study would permit.

Private Sector Assessment of the New Funding Procedure. The information obtained for the purpose of determining the private sector assessment of the adequacy of the new basis for funding was acquired in the following manner:

Five questions were devised to elicit this data. Answers to the questions were received through interviews (both personal and telephone) and through responses returned by mail or through other individuals. Responses to these five questions are listed in Appendix II. They are listed in the order of the number of apprentices enrolled in each program which participated in the study. The responses begin with the program which enrolled the smallest number of apprentices and terminates with the program which enrolled the largest number. These programs enrolled from six apprentices to 309 apprentices.

> Question 1: How do you feel the present funding system compares to the previous funding system and why?

Three of the participants gave no response to this question. One explanation of this failure to answer the question may lie in comments of two others. One respondent indicated that he had little or no information about the previous method. Another stated in the interview that he had been given no explanation by the school of the present method. It was the feeling of the interviewer that there was a frequent lack of effective communication regarding funding methods. Of those who responded to the question, 85 percent expressed favorable to enthusiastic acceptance of the new procedure. The most frequent idea expressed by those who approved the program was that the new procedure was more flexible and permitted expenditure of funds for additional purposes which would directly improve the program.

> Question 2: Can the local school system be more helpful in the operation of apprenticeship?

One participant did not respond to this question. Thirteen of the respondents answered, "No". Fourteen answered, "Yes". (The additional response results from one coordinator whose program is divided between two districts. He responded

"No" for one location, and "Yes" for the other.) The "Yes" responses were requested to explain how the local school might be more helpful. Among the responses to this part of the question, the most frequent answers expressed concern for better communication with local school officials and more adequate facilities. Two respondents mentioned that it would be desirable for the local sponsor to participate in the budgeting process.

Question 3: Can State funding of apprenticeship related instruction classes be modified to be more responsive to your needs?

One participant provided no response to this question. Nine respondents replied, "No", to this question. The remaining comments (16) provided a variety of suggestions of ways State funding might be made more helpful. Nearly all, however, in one way or another were essentially requests for additional funds. Most suggestions could be summarized as a request that the limit of 12 students per class in the present reimbursement formula be increased--preferably to include all students in a class.

Question 4: In order of importance what are the five most urgent needs of your program?

No response was given this question by two participants. Other respondents identified from one to five needs. The need for improved physical facilities was a frequent response, and where mentioned, was usually listed first. Twelve respondents stated that instructional materials were a principal need--textbooks were most often mentioned specifically. Another frequently expressed need pertained to better cooperation and/or coordination with other interested groups. These included the local school, the JAC, and others concerned with apprentice training. Three individuals indicated problems in attracting qualified applicants while an additional three stressed the importance of better qualified

instructors. Five respondents stated a need for full-time program coordinators.

Question 5: What have been the five most important improvements in your program in the last five years?

The purpose of this question was to provide an assessment of the relative importance placed on various aspects of apprentice related instruction programs by those who conduct them. When viewed in relationship to question number four, answers to this question help provide insight into the priorities of expressed needs. Three participants provided no response to this question.

Eleven respondents indicated that new or improved physical facilities obtained during the past five years were considered to be one of their most important improvements. This is consistent with the large number of those who indicated improved physical facilities to be their greatest need in response to question number four. There were fifteen statements regarding improved relationships, cooperation, and/or coordination with those who are in a position to influence the program. This, too, coincides with instances in question number four where improved relationships with others concerned with the program was seen as a need. Only two respondents mentioned better instructional materials as our important improvement. When compared to the number who saw improved instructional materials as an urgent need, an interesting question is raised. When adequate instructional materials are available to a program, are they taken for granted and not seen as an important accomplishment; or is there a general dearth of suitable instructional materials in the related instruction programs? The latter appears to be the more probable explanation. Improved funding was seen as a major improvement by eight participants. There were four specific mentions of improved State funding, while four mentioned better local funding.

In summary, it appears the new funding policy was met with enthusiastic approval by nearly everyone concerned with related instruction programs conducted for apprentices through the public schools. In identifying ways the funding procedure might be improved, numerous respondents suggested that funding from the Agency be made more flexible, that is, that reimbursement be permitted on instructional materials and other program needs as well as on instruction and supervision. It was also frequently suggested that the number of students on which contact hour reimbursement would be made should be increased. There were some requests that reimbursement be permitted on all students enrolled in a class irrespective of the total number. Others indicated only that the maximum should be increased to a larger number than twelve. There were also indications that a need was felt for better communications from school officials and for more participation on the part of sponsors in the planning stages of budgets and programs. These indications were evident both in the written responses to questionnaires and in conversations with the interviewer.

Capabilities of the Private Sector Funding. It was known from data obtained in the Apprenticeship Related Instruction Cost Study (1972) that the major portion of the costs of related instruction in apprenticeship programs is borne by the apprenticeship training committees. It was hoped that the present study might provide additional information on the private sector involvement in two respects: (1) Has the new funding procedure changed the ratio of involvement between the private sector and the Texas Education Agency? (2) What is the nature of the expenses being absorbed by the training committees under the new funding procedure?

The extent of participation in this part of the study was somewhat disappointing of the 26 respondents who provided information regarding their assessment of the new funding program, only 16 included the financial data which was requested. This constituted a sampling of 22 percent of the 73 programs which are reimbursed by the Texas Education Agency. The information obtained from those who did participate in this phase of the study was generally detailed and well documented.

One problem in obtaining participation in this part of the study stemmed from the fact that there was no uniformity in the time at which annual accounts were closed and audits were performed. Data on expenditures were requested for the 1973-74 school year. Although the data were collected in the summer of 1974 after the close of school, numerous programs had not closed accounts and the desired information was not readily available. Those programs that did participate generally provided the information from audited records. One program, however, estimated expenditures for 1973-74. This was Program Number 18. Expenditures of this program for previous years were adequately detailed, had been audited, and provided a good basis for the estimate.

The first table in Appendix III provides a summary of expenditures for the 16 participating programs. Amounts have been rounded to the nearest dollar. The program numbers indicated in the table correspond to the program numbers in Appendix II. The programs numbered in the table are the 16 participants (out of total of 26) that provided data on expenses borne by the committee.

The following is a brief explanation of expense items as they appear in the table entitled "Summary of Expenditures by Programs."

Instructors' salaries. This amount constitutes a portion of the salary of one or more instructors which was paid by the committee directly to the instructor as a supplement to the salary paid by the school. While there are no substantiating data, the interviewer learned that the salaries received by instructors (including the supplement) ranged from an amount equal to the hourly wages in the respective crafts to double the regular hourly wage. The average appeared to be about one and one half times the regular hourly wages in the craft.

Other salaries. This amount represents salaries paid to others than the instructor. It includes salaries for clerical personnel and building custodians. All or part of a coordinator's salary were paid by programs number 15, 17, 21, 22, 23, and 26. Programs number 17, 18, and 24 also included a portion of administrative salaries in the amounts of $830, $500, and $3873 respectively.

Travel. This represents travel related to the instructional program. In general, it is for purposes other than conferences and contests. These are covered in a separate item.

Building expense. Expenses under this heading include rent or an equivalent amount for amortization where building is owned by the training committee. Only buildings used for classroom or laboratory purposes are included here. Office space for committee or administrative personnel is included under "other expenses."

Instructional materials. Included under this heading are such items as text books, library books, training aids, expendable shop supplies, and other materials.

Equipment purchases. These expenditures are for capital equipment used in the instructional program.

Conferences and contests. Expenses incurred as a request of participation in the Southern States Apprenticeship Conference, the Purdue Contest for Plumbers and Pipe Fitter Apprentices, State Apprenticeship Contests and similar programs are shown here. In-service training conferences are also included. The amount includes apprentices, instructors, and coordinators.

Payments to school. This includes any payment by the committee to the public school through which the program is conducted. In most cases this represents tuition for the apprentices which (in these instances) is paid to the school by the committee. Tuition collected by the school directly from the students is not considered in this study to be an expense of the training committee. Other payments to the school are for a variety of items such as social security, instructor salary supplements, supervisory salaries, and various student services.

Other expenses. Expenditures for such items as office supplies, auditors' fees, student services, office rent for committee members or coordinators, and equipment maintenance and repair are included under this heading.

At the bottom of the table, the amount of reimbursement for the program received by the school from the Texas Education Agency is shown. This information is taken from records of the Agency.

The second table in Appendix III, entitled "Classroom and Laboratory Facilities," provides information on ownership of classroom and shop buildings. There is a variety of arrangements ranging from ownership and maintenance by the school to ownership and maintenance by the local union. The specific arrangements of each program are described.

It appears that the first question on which this phase of the study was expected

to provide information cannot be answered definitely -- Has the new funding procedure changed the ratio of involvement between the private sector and the Texas Education Agency? Several problems exist: (1) It was not possible to obtain a random sample of programs, (2) the data obtained for the private sector in this study actually included only expenditures by the committee, while the Cost Study of 1972 included committees, employers, and others, and (3) the sample for the current study is heavily weighted by programs which provide their own classroom and laboratory facilities.

The Cost Study of 1972 did provide a separate total for expenditures by the committees, however. The amount was $2,253,947 for programs included in the study. The 1972 study also arrived at a total reimbursement by the Texas Education Agency of $296,791 for those programs included in the inquiry. (Apprenticeship Related Instruction Cost Study, 1972, Table 2, p. 14.) The total of these two sources of funding was $2,550,738. Thus, the committees provided 88.4 percent of this total while the Texas Education Agency provided 11.6 percent.

In computing totals for the sample in the present study, Program Number 1 was omitted. No reimbursement was reported by the Agency for this program which has six apprentices. The total expenditures reported by the remaining 15 programs in the sample was $401,324. The amount reimbursed the public schools for these programs by the Agency was $144,712. The total of these two sources of funding was $546,036. This constitutes a ratio of 73.5 percent for the training committees and 26.4 percent for the Agency.

This would suggest that the percentage of involvement by the Agency has increased significantly. This probability appears to be strengthened if the present

sample includes (as was suggested) a disproportionately high percentage of programs in which the committee or local union provides the classroom and laboratory facilities. These conclusions should be held as tentative, however, till further data can be obtained.

The total amount expended by the 16 programs in the study are listed in the table below. The expense items are listed in the order of their relationship to the grand total for expenditures by all programs combined. (Note the total percentage does not add to 100 due to rounding.)

TOTAL AMOUNT OF EXPENDITURES
FOR 16 PROGRAMS IN THE STUDY

Expenditure	Total Amount	Percent of Grand Total
Building Expenses	$105,510	26.0
Other salaries	71,960	17.8
Instructors' salaries	66,444	16.5
Instructional materials	55,422	13.7
Conferences and Contests	49,235	12.2
Payments to school	23,042	5.7
Equipment Purchases	12,390	3.1
Other expenses	11,919	2.9
Travel	8,930	2.2
Grand Total	$405,052	100.1

The data appear to provide useful information on the second question which this part of the study was designed to answer -- What is the nature of the expenses being absorbed by the training committees under the new funding procedure? As indicated by the Table, "Summary of Expenditures by Programs" (in Appendix III) the largest expenditure for committees which own the classroom and laboratory facilities in which related instruction is conducted is generally

"Building expense". The one exception is Program Number 20 whose payments to the school were somewhat greater than building expenses. The total amount spent by the 16 programs for building expense was also the largest amount spent by the combined programs in the study.

"Other salaries" were a major expenditure for several of the programs. Of the 11 groups that funded salaries for others than instructors, five provide part or all of a salary for a coordinator. The amount paid for coordination ranged from $135 to $16,153 per year. Clerical salaries were paid by eight of the programs. The amount ranged from $120 to $5,670 annually. The second highest amount paid for clerical salaries was $1,786. Administrative salaries constituted an expenditure for three programs with amounts of $500, $830, and $3,873. Building custodians were paid $20, $450, $960, and $5,100 by four committees. The total amount of $71,960 spent by the 16 programs constituted the second largest expenditure of all programs combined.

Only one program (Number 12) did not report any expenditure for instructors' salaries. The cost of salaries of instructors for individual programs in comparison to other expenditure varied widely. For five programs, (Number 3, 10, 15, 20, and 21) it was the largest single expenditure. "Instructors' salaries" tied "payments to school" as the largest expenditure of Program Number 18. For Program Number 26, it was the smallest expense item. For all programs in the study combined, instructors' salaries constituted the third greatest expense.

A major expenditure by most committees was for instructional materials. It appears probable that a principal part of the instructional materials used in related instruction classes is supplied by the training committees. Only two

committees reported no expenditures for this purpose. Although one program (Number 7) showed expenditures for instructional materials to be the largest single expense, for all programs combined, it was the fourth largest expenditure.

The cost of sending apprentices, instructors, and coordinators to conferences and contests was another major cost of the training committees. For the largest program (Number 26) it was the greatest single expense. For the combined programs, it was the fifth largest expense.

"Payments to schools" and "Equipment purchases" were respectively the sixth and seventh greatest expenses for the combined programs. Travel expense other than for conferences and contests was a sizable expense only for three of the largest programs. Program Number 22, which had the largest expenditure for this purpose, charged 80 percent of administrative travel to instructional purposes. Program Number 23 assigned all administrative travel to instruction, while Program Number 26 assigned 95 percent of administrative travel to instruction. For all programs combined, "travel" constituted the smallest expense category.

It is evident from the data that expenditures by the committees make a major contribution to the quality of related instruction in apprenticeship training programs. Classroom and laboratory facilities tailored specifically to program needs and instructional materials have contributed greatly to program enrichment. It is doubtful that experienced instructors could be obtained without the supplementary amounts paid on instructor salaries. The "extras" such as participation in contests and in many of the training conferences probably would not be possible without the financial participation of the training committees.

RECOMMENDATIONS

Although this report was not completed and published until after the beginning of school in 1974, the data were available to personnel of the Texas Education Agency during the previous summer. A modification in the funding program which the Agency made effective for the 1974-75 school year is consistent with what would have been a primary recommendation of this report.

The following provision was included in guidelines released by the Texas Education Agency to public schools in August, 1974.

"Limitations have been placed on the amounts reimbursable to the local education agency for approved expenditures. The maximum percentages reimbursable for each category are as follows:

Instructional Salaries	80% of approved class allotment
Supervision and Evaluation	15% of approved class allotment
Clerical and Custodial Salaries	8% of approved class allotment
Other (Supply, etc.)	25% of approved class allotment

Maximum reimbursement for the four categories cannot exceed 100 percent of the approved class allotment."

The amount reimbursed by the Agency for these categories of expense is paid to the public schools through which classes are conducted. There is no reimbursement directly to the local training committees or program sponsors. Those programs which provide their own classroom and laboratory facilities generally receive no assistance for categories other than instructors' salaries. There were some instances reported, however, where the school provided some help on purchase of supplies and instructional materials.

Other recommendations which have resulted from the present study are as follows:

1. That an effort be made by all concerned to improve communication regarding the opportunities available through apprenticeship training and the role of the Texas Education Agency in funding apprenticeship related instruction. Particularly it is suggested that the Texas Education Agency, the public schools, the Bureau of Apprenticeship and Training, The Apprenticeship and Training Association of Texas, the local training committees, and (where they exist) the State training committees continue and expand their efforts to ensure that everyone involved in apprenticeship training is familiar with the funding policies of the Agency.

2. That the Texas Education Agency develop and publish a State Plan, Guidelines, and Minimum Standards for related instruction classes funded by the Agency.

3. That in preparing the proposed State Plan, Guidelines, and Minimum Standards, the optimum size (for instructional purposes) of various types of classes be determined and that the maximum size of the classes for which reimbursement is paid be increased from the present 12 to 16 or 18.

4. That the Texas Education Agency provide local schools with information on any changes in funding policy no later than June 1 each year. At this time information should also be available regarding specific expenses which may be reimbursed and (to the extent that available funds are known) the amount which can be committed by the Agency to the school for reimbursement of related instruction classes.

5. That the Texas Education Agency provide basic funding information annually to the other groups listed in Recommendation Number 1 immediately after it is released to the local schools.

6. That representatives of the local schools and representatives of the local training committees be encouraged to develop program budgets on a cooperative basis to help ensure that all financial resources be coordinated toward making the maximum contribution to program effectiveness.

7. That area consultants of the Texas Education Agency be familiar with current guidelines and policies of the Agency regarding related instruction classes in order to assist local interests in program development and budget planning.

8. That the Texas Education Agency sponsor an annual meeting of apprenticeship coordinators in conjunction with other summer and/or winter workshops.

RESPONSES TO QUESTIONS REGARDING ASSESSMENTS OF NEW FUNDING PROCEDURE

QUESTION 1: HOW DO YOU FEEL THE PRESENT FUNDING SYSTEM COMPARES TO THE PREVIOUS FUNDING SYSTEM AND WHY?

1. No response.

2. It's more equitable for the JAC.

3. Improvement, helping greatly.

4. Present system more reasonable because it shares equal operation costs with local JAC.

5. No change - were getting $6 per instruction hour and are still getting it. Did away with $10 per apprentice per semester tuition. This year at end of year, $200 was allotted to program for books.

6. Much better. Change to public school made funding much more directly responsive.

7. No response.

8. Increased funding allows program to operate on broader base.

9. It's no different than before in _____ (Name of school).

10. Don't know anything about previous system.

11. Good, allows local funds to be used for needed items no longer covered by International Training Fund.

12. Appreciate having more money--don't know (how present system compares to previous system).

13. Increased funding by TEA took some strain off funding by local JAC.

14. Better because of increase instructors' salary and funds for material cost.

15. Better, less expense on local committee.

16. Got to be better. Other than an increase in instructors' salaries little of the funds sifted through.

17. Much improved. Added funds have been a great help.

18. Helping a considerable amount. Allowing enrichment of program.

19. Much better than old system. More of funding reaching the apprentice program.

20. Better, because of added funds.

21. Improved, no information from school people.

22. Much better because of flexibility.

23. Better because of flexibility.

24. The present system of $ .92 per student hour is much better than the old system. More of this funding is finally reaching the apprenticeship program.

25. Well pleased with contact hour system -- no comparison to old system.

26. Much better. More needed benefits.

QUESTION 2: CAN THE LOCAL SCHOOL SYSTEM BE MORE HELPFUL IN THE OPERATION OF APPRENTICESHIP?

1. No response.

2. No.

3. No. Has been very cooperative - furnishing facilities like pipe trades.

4. Yes, by providing a better training facility.

5. Yes, by including the program sponsor in the budgeting of the money. Maintain closer communication with the program sponsors.

6. No, don't see how.

7. No.

8. No.

9. Yes, increasing instructor cost, furnishing material cost and rental cost for shop area in _____(Name of school).

10. Yes, they will not let our students use the equipment which they have available for their classes.

11. No.

12. Yes, develop better understanding of program and better communications.

13. Yes, let the committee and instructors' know what's going on.

14. Yes, by not interfering with the local JAC'S method of operation. Not interfering with school policy.

15. Yes, let this committee and instructors know what is going on.

16. Yes, pass on more of funds. Could be more helpful in communications to state office. (That is, the school could be more helpful in assisting in communications between program leadership and TEA).

17. No (for one location). Yes, communications need to be better (for second location).
NOTE: This respondent instructs in two school districts.

18. Yes, excellent cooperation but short on space. Feel could have space if nonproductive programs were phased out (MDTA).

19. No.

20. Yes, by eliminating "red tape" in receiving supplies. Long procedures delay delivery. Coordinators need to be in on budgeting money for program use.

21. Yes, only in funding -- have coordinator.

22. No, the school system is changing so fast, can't complain now.

23. No.

24. No.

25. No, local coordinator leaves little desired.

26. No.

QUESTION 3: CAN STATE FUNDING OF APPRENTICESHIP RELATED INSTRUCTION CLASSES BE MODIFIED TO BE MORE RESPONSIVE TO YOUR NEEDS?

1. No response.
2. By paying reimbursement on each student.
3. Yes, pay 100%.
4. Yes, by paying the present rate on each student regardless of the number that is enrolled.
5. Yes, see to it that present flexibility is used to the full advantage of the local apprenticeship program.
6. No, don't know how it could be.
7. No.
8. Yes, reimbursement by the contact hour on all students.
9. Yes, by paying on each student by the contact hour.
10. No.
11. No.
12. Yes, come in and discuss plans, etc.
13. Yes, reimbursements should be paid on each student regardless of class size.
14. Reimbursement should be 92¢ on every student.
15. Yes, increase the maximum number in classes.
16. Not at present. We do need for school to be more flexible.
17. No, not now. Flexibility is helping.
18. Yes, use flexibility to buy training aids and other instructional materials.
19. Yes, more funding.

20. Yes, more money on direct funding with less red tape and overhead charges by intermediate funding agency (30% going to school).

21. No, need more information on present flexibility.

22. Yes, put in more money to level out fluctuations caused by work picture in industry funding.

23. No - satisfied.

24. Yes, more funding.

25. Yes, direct funding to financially sound programs which have own facilities, including supervisory reimbursement to full-time coordinators.

26. Yes, increase funding to pay for supervision within the program and help with material purchases.

QUESTION 4: IN ORDER OF IMPORTANCE, WHAT ARE THE FIVE MOST URGENT NEEDS OF YOUR PROGRAM?

1. a. Blueprint reading.
   b. Welding.
   c. Reinforcing setting.
   d. Structural steel.
   e. Miscellaneous steel.

2. a. Need a local training fund.
   b. Better coordinated JAC.
   c. More dedicated interest in apprenticeship.
   d. New text materials.
   e. Visual aids.

3. More laboratory testing equipment. (Only response)

4. a. Better facility to train in.
   b. New textbooks.
   c. Visual aids.
   d. Closer coordination between school officials and JAC.
   e. Closer coordination among members of local JAC.

5. a. Money to round out program.
   b. Better facilities -- using public school facilities.
   c. More contractor interest.

6. Shop materials because of decrease in ITF (International Training Fund), journeyman training. (Only response)

7. Qualified applicants. (Only response)

8. a. Larger shop area.
   b. More jobs.
   c. Program coordinator.
   d. New textbooks.
   e. More flexibility of control.

9. a. Better cooperation of school officials.
   b. Better cooperation of management group.
   c. Better cooperation of JAC.
   d. New text materials.
   e. More jobs.

10. a. More money.
    b. More equipment.

11. More qualified applicants. (Only response)

12. a. Adequate committee financing.
    b. Full time coordinator.
    c. Some help in applying national materials at the local level.
    d. Employer participation and help.

13. a. More jobs in order to train the apprentices.
    b. More shop area.
    c. More and better visual aids.
    d. New textbooks.
    e. Full time coordinator.

14. a. Funding should be on the contact hour for each student .
    b. New textbooks.
    c. Better equipment to be used at facility.
    d. Visual aids.
    e. Full time coordinator.

15. a. New building - more fitted to needs of the program.
    b. Better qualified instructors (more and better teacher training).
    c. More local funds.
    d. More active support and understanding by local schools.

16. a. More physical facilities for advanced courses.
    b. Local coordination.

17. No response.

18. a. Shop facilities.
    b. Better qualified instructors.

19. a. More funding for equipment.
    b. More funding for text materials.
    c. More funding for tools, equipment, and materials.

20. a. More money - due to local economy being let down and other sources.
    b. Teacher training.

21. a. Equipment - motor controls and pipe bending (plan to buy some).
    b. Instructional materials--beyond third year.
    c. Supplementary materials.

22. a. Complete new training facility.
    b. More training aids.
    c. Time for extra tutoring.

23. a. More space.
    b. More ITF (International Training Funds) for tools and capital equipment.
    c. More journeyman classes.
    d. Full time secretary.
    e. More black applicants (qualified and sincere).

24. a. More funding for equipment.
    b. More funding for text materials.
    c. More funding for tools--materials--and supplies.

25. Increase size of training facility.

26. No response.

QUESTION 5: WHAT HAVE BEEN THE FIVE MOST IMPORTANT IMPROVEMENTS IN YOUR PROGRAM IN THE LAST FIVE YEARS?

1. a. Being reactivated.
   b. Building a building.

2. a. Organization of the JAC.
   b. Starting related classes.
   c. Good job opportunity..
   d. Higher wage rates.
   e. Interest shown by management people.

3. a. General updating of total program.
   b. Instructional materials.
   c. Cooperation of National JAC in developing local standards.
   d. Selecting apprentices only one time per year.
   e. Responding to Title 29 Part 30 (1964) selection.

4. a. Holding related classes instead of correspondence courses.
   b. Initiation of local training fund.
   c. Interest created by participating in state apprentice contest.
   d. The use of a part time coordinator.

5. a. Attitude of apprentices has changed -- taking pride and showing appreciation of opportunity afforded them.
   b. More control and interest by the committee in what is being taught.
   c. A test record kept on each apprentice.

6. Getting out of P. S. institution and getting into own facilities. (Only response).

7. a. New building specifically for apprentice training.
   b. More local union interest.
   c. More instructors available.
   d. Increased flexibility in state funding.

8. a. Change in funding rates by TEA.
   b. Initiation of local training fund.
   c. Closer coordination with school officials.
   d. Closer coordination with local JATC.
   e. Better training facilities.

9. a. Initiation of local training fund.
   b. Better related classes.
   c. New facility to train in.
   d. Guidance by state coordinator.
   e. Minority participation.

10. a. Welding class was added.
    b. Plastic has been introduced for some patterns.
    c. More capable teachers have been added.
    d. We have received more cooperation from contractors.

11. Modified building to more nearly meet program needs, building exclusively for trade. (Only response).

12. Haven't had any important improvements. (Only response).

13. a. Closer coordination with school officials.
    b. Closer coordination by JATC.
    c. Increased funding by TEA.
    d. Initiation of local training fund.
    e. Newer facilities.

14. a. Improved funding of program by TEA.
    b. Negotiation of local training fund.
    c. New training building for training purposes.
    d. Closer coordination with school officials.
    e. Closer coordination with local JATC.

15. a. Different building.
    b. Increased number of apprentices by 300%.
    c. Better local union participation and understanding.
    d. Better management participation.

16. a. Changed instructors.
    b. Added to staff.

17. No response.

18. a. The tremendous upsurge in acceptance and approval by journeymen.
    b. Programs are turning out journeymen that are of a caliber that is generating more interest and applicants.
    c. There is evidence of the quality of the work improving as a result of new graduating apprentices entering the ranks of journeymen.

19. a. Constructed larger class and shop facilities.
    b. Purchased additional machines.
    c. Number of classes increased from four to eleven.
    d. Number of instructors increased from two to ten.
    e. Local training fund increased from 3 1/2 cents to 5 cents.

20. a. Own building for exclusive use.
    b. New State funding.
    c. Increase in local per-capita apprentice fund.
    d. Increased cooperation between labor and management in apprenticeship programs.
    e. Emphasis and assistance to adult and apprentice education by local school administration in recent years.

21. a. Full time training director.
    b. Having own facilities.
    c. Instructional materials from National.
    d. Better qualified applicants (don't know why).
    e. Labor-management relations on rules and regulations.

22. No response.

23. a. New training facility.
    b. Coordinator on full-time.
    c. Increased funding (local fund).
    d. Participating in national annual training directors meetings.
    e. Improvement in committee administration of program.

24. a. Organization of classes--assistance and record keeping.
    b. All new text materials from _____(Name of National Organization) through public schools.
    c. Tools and equipment from International Training Funds.
    d. State funding change helped take up slack in International Training Funds.

25. a. Constructed larger classroom and workshop facilities.
    b. Purchased additional welding machines.
    c. Number of classes increased from four to ten.
    d. Apprentice training increased from 3 1/2¢ to 5¢ per hour.

26. a. Building a shop building.
    b. Change in funding of program.
    c. Positive change in attitude of school administration and JATC.

27. No response.

20. a. Own building for exclusive use.
    b. New State funding.
    c. Increase in local per-capita apprentice fund.
    d. Increased cooperation between labor and management in apprenticeship programs.
    e. Emphasis and assistance to adult and apprentice education by local school administration in recent years.

21. a. Full time training director.
    b. Having own facilities.
    c. Instructional materials from National.
    d. Better qualified applicants (don't know why).
    e. Labor-management relations on rules and regulations.

22. a. New training facility.
    b. Coordinator on full-time.
    c. Increased funding (local fund).
    d. Participating in national annual training directors meetings.
    e. Improvement in committee administration program.

23. a. Organization of classes--assistance and record keeping.
    b. All new text materials from _____(Name of National Organization) through public schools.
    c. Tools and equipment from International Training Funds.
    d. State funding change helped take up slack in International Training Funds.

24. a. Constructed larger classroom and workshop facilities.
    b. Purchased additional welding machines.
    c. Number of classes increased from four to ten.
    d. Apprentice training increased from 3 1/2¢ to 5¢ per hour.

25. a. Building a shop building
    b. Change in funding of program.
    c. Positive change in attitude of school administration and JATC.

26. No response.

APPENDIX III

SUMMARY OF EXPENDITURES BY PROGRAMS

OWNERSHIP OF CLASSROOM AND LABORATORY FACILITIES

SUMMARY OF EXPENDITURES BY PROGRAMS

EXPENDITURES	PROGRAM NUMBER							
	1	3	6	7	10	11	12	15
Instructors' Salaries	$1,063	$1,253	$ 450	$ 660	$ 317	$ 645	---	$2,160
Other Salaries	---	---	$ 300	---	$ 120	$ 530	---	$ 735
Travel	---	---	$ 630	---	---	---	---	---
Building Expenses	$ 465	---	$4,100	---	---	$1,016	$1,500	$ 950

BIOGRAPHICAL DATA OF RESEARCH PERSONNEL

BIOGRAPHICAL DATA

MANSFIELD, WESLEY B. January, 1974

PERSONAL:

Age: 55 Citizenship: U.S. S.S. No.: 476-10-5932

Birthplace: Groveton, Texas Marital Status: Married

Number of Children: Two

Professional Interests:

Vocational Industrial Education
Supervisory and Managerial Development
Business and Industrial Communication

EDUCATION:

D.Ed., Texas A&M University, 1970.
M.A., Baylor University, Summer, 1948.
B.A., Baylor University, Spring, 1948.

EXPERIENCE:

Educational

Associate Director, Engineering Extension Service, Texas A&M University 1973-Present
Assistant Director for Programs, Engineering Extension Service, 1972-1973
Program Head, Supervisory Development Program, Engineering Extension Service, 1963-1972
Extension Instructor, Supervisory Development Program, Engineering Extension Service, 1953-1963

Industrial

15 years in industrial field of Structural Steel Fabrication in areas of estimating, designing, and production coordination.

Military Service

Service in U.S. Maritime Commission (1943-1944) and Water Division of U.S. Army Transportation Corps (1944-1946). Served in European Theater of Operations and attained rank of First Lieutenant.

PROFESSIONAL AFFILIATIONS:

Texas Vocational Industrial Association
American Vocational Association
Phi Delta Kappa
Iota Lambda Sigma
Texas Association for Community Service and Continuing Education

COMMITTEE MEMBERSHIPS:

Apprenticeship and Training Advisory Committee to the Texas Education Agency
Brazos County Development Council Manpower Committee
Business/Industry and Education Exchange Advisory Committee to the Texas Education Agency
Texas A&M University Library Council

OTHER PROFESSIONAL ACTIVITIES:

Extensive work in field of human relations and communication in industry.

Co-developer of the "Communimeter" (A training device being used internationally to point up problems in person-to-person communication).
Coordination of more than 2000 short courses, seminars, and workshops. Instruction in more than 450 of these.
Author of numerous articles and training manuals in communication and supervision.
Title of Doctoral Dissertation: A Study of Time Allotments to First-Line Supervisory Activities in Texas Manufacturing Industries with Implications for Training Programs.

BIOGRAPHICAL DATA

PULASKI, RICHARD E. January, 1974

PERSONAL:

Age: 43 Citizenship: U.S. S. S. No.: 462-36-1868

Birthplace: San Antonio, Texas Marital Status: Married

Number of Children: Two

Professional Interests:

Apprenticeship Training
Labor-Management Relations

EDUCATION:

Ed.D, Interdisciplinary Education, Texas A&M University (In Prog.)
M.Ed., Industrial Education, Texas A&M University, 1966
B.S., Industrial Education, Texas A&M College, 1960

EXPERIENCE:

Educational

Training Consultant, Texas Engineering Extension Service, Texas A&M University 1971-Present
Administrative Assistant to the Superintendent, North East Independent School District, San Antonio, Texas 1972-73
Program Officer, Advisory Council for Technical Vocational Education in Texas, 1969-1971
Apprentice Training Specialist, Texas Engineering Extension Service, Texas A&M University, 1962-1969
Teacher-Coordinator, Industrial Cooperative Training, Midland Independent School District, Midland, Texas 1960-1962
Instructor of Apprentices, Odessa College, 1961-1962

Industrial

A total of 5 years with various employers
4 years as an Apprentice Plumber & Pipe Fitter
1 year as a Journeyman Plumber & Pipe Fitter 1948-1949
Various full and part-time assignments with the Building and Utilities Department, Texas A&M College, 1956-1960

Military

U.S. Navy, Enlistedman 1950-1954

LICENCES:

Professional

Texas-High School Teacher, Academic and Vocational Subjects.
Vocational Supervisor and Counselor Administrator Certificate.

Trade

Texas-Journeyman Plumber

PROFESSIONAL AFFILIATIONS:

American Society of Sanitary Engineers
United Association of Journeyman Plumbers and Pipe Fitters in the U.S. and Canada
Texas State Association of Plumbing Inspectors (Honorary Life Member)
American Vocational Association
Texas Industrial Vocational Association
Texas State Teachers Association
Apprenticeship and Training Association of Texas
Iota Lambda Sigma
Phi Delta Kappa

COMMITTEE MEMBERSHIPS:

Texas Education Agency Construction Cluster Curriculum Development Advisory Council for Technical Vocational Education in Texas (Labor Alternate)
Texas Comprehensive area Manpower Planning System Committee
Bryan Manpower Development Training Act. Committee
College Station Plumbing Code Advisory and Appeals Board, Chairman

OTHER PROFESSIONAL ACTIVITIES:

Author of numerous articles and training manuals related to apprenticeship and related instruction.
Contributor to articles and books regarding plumbing, pipe fitting, and apprentice training.
Lecturer on apprenticeship training and building inspection.
Investigator on studies and research projects related to apprentice training.

HONORS AND AWARDS:

Vocational-Technical Education Leadership Development Fellowship Awardee (EPDA-552)

Mechanical Contractors of Texas Commendation for Leadership in Development of Apprenticeship and Journeyman Training Programs

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 71P.

ABSTRACT: THIS REPORT PRESENTS DATA DESIGNED TO PROVIDE ESTIMATES OF THE PROPORTION OF THE LABOR FORCE IN WHICH KNOWLEDGE OF AGRICULTURE AND AGRICULTURAL PROCESSES COULD IMPROVE ON-THE-JOB PERFORMANCE. "THE STANDARD TERMINOLOGY FOR CURRICULUM AND INSTRUCTION IN LOCAL AND STATE SYSTEMS" WAS USED TO DETERMINE OCCUPATIONS WHICH MAY REQUIRE AGRICULTURAL OR RELATED COMPETENCIES. THIS WAS SUPPLEMENTED BY THE EXPERIENCE OF TEXAS AGRICULTURAL AND AGRIBUSINESS SPECIALISTS WHO EVALUATED JOB TITLES USED IN CLASSIFYING SURVEY EMPLOYMENT DATA FROM THE 1970 CENSUS OF THE POPULATION. IN 1970, OVER 500,000 JOBS EXISTED IN 141 OCCUPATIONS REQUIRING AGRICULTURAL OR RELATED KNOWLEDGE. THESE JOBS WERE FOUND IN 172 INDUSTRIES WITH APPROXIMATELY HALF IN 12 INDUSTRIES INVOLVED IN THE PRODUCTION OF AGRICULTURAL, HORTICULTURAL, FORESTRY, AND FISHERY PRODUCTS AND RELATED SERVICES AND PROCESSING INDUSTRIES. THE REMAINING OCCUPATIONS WERE IN AREAS SUCH AS EDUCATION, AGRICULTURAL AND FOOD PRODUCT SALES, BANKING, AND REAL ESTATE. APPENDIXES CONSIST OF THE GUIDE DEVELOPED TO DEFINE AGRICULTURAL COMPETENCIES, THE CENSUS QUESTIONS USED TO OBTAIN THE OCCUPATIONAL AND INDUSTRY DATA, LISTS OF ADVISORY COMMITTEE MEMBERS, LISTS OF VOCATIONAL AGRICULTURE COURSES IN TEXAS, AND CENSUS CODING SCHEME FOR OCCUPATION COMBINATIONS. DIGEST

Development and evaluation of vocational education programs requires knowledge of current and projected occupations which utilize the competencies gained from instructional programs. Because of the increasing interrelationships involved in the production, processing and distribution of agricultural products many persons in this chain, in addition to persons in the production sector, require competencies gained through instructional programs of vocational agriculture. While not difficult to estimate the potential training requirements in the production sector alone, identification of occupations in allied industries involves a detailed search over all occupations and industries. The Standard Terminology for Curriculum and Instruction in Local and State School Systems, published by the Office of Education was used as a standard reference to determine occupations which may require agricultural or related competencies. This was supplemented by the experience of Texas agricultural and agribusiness specialists who evaluated job titles used in classifying survey employment data from the 1970 Census of Population.

In 1970, over 500,000 jobs existed in 161 occupations requiring agricultural or related knowledge. These jobs were found in 172 industries with approximately half in twelve industries involved in the production of agricultural, horticultural, forestry and fishery products and related services and processing industries. The remaining occupations were in areas such as education, agricultural and food product sales, banking and real estate. While not all occupations identified require formal agricultural training and many require training in addition to that received from programs of vocational agriculture, analysis of the data leads to several recommendations for Vo-Ag. curriculum development.

Production agriculture

Production agriculture, while becoming less labor intensive will in the future, require a higher quality of human input. With a technologically dynamic agriculture this means that vocational-agriculture instructional programs will require constant evaluation and revision to assist in the training of this manpower. Additional programs of continuing adult education stressing farm record keeping and farm equipment maintenance and operating safety is encouraged.

A larger number of wage and salaried workers than self employed operators identified agriculture as their major source of employment. Almost 98,000 wage and salaried persons were tabulated by the 1970 Census of Population compared with 73,526 farm operators and tenants who earned over half of their income from farm operations. New courses of instruction dealing with farm personnel management and increased emphasis on occupational safety is encouraged.

Land economics and real estate

Emphasis on land conservation practices relating both to agricultural and non agricultural land use is recommended. The establishment of the Texas Real Estate Center at Texas A&M University provides a new resource for developing courses of instruction in land management and appraisal.

Gardeners and Groundskeepers

The existence of almost 20,000 gardeners and groundskeepers in Texas suggests that further study should be undertaken to determine the feasibility of expanding cooperative education efforts in landscape and grounds maintenance. Gardeners and groundskeepers are employed in over 125 industries in Texas. The continuing emphasis on environmental beauty suggests that higher skilled employees will be required in the future.

ACKNOWLEDGMENTS AND PROJECT STAFF

The research team for this project consisted of the following persons associated with the Texas Agricultural Experiment Station.

Conrad F. Fritsch, Assistant Professor Dept. of Agricultural Economics and Rural Sociology	Project Director and Principal Investigator
John W. Holcomb, Professor Dept. of Agricultural Education	Co-Project Director
Earl S. Webb, Professor Dept. of Agricultural Education	Co-Project Director
Larry R. Lorenz	Co-Principal Investigator
David E. Wright	Research Scientist
Dennis L. Dance	Computer Scientist
Paula Tebbs Susan Moellenberg	Project Secretaries
Joanna Harrington	Technical Assistant
Susan Cronk	Clerical Assistant

In addition, Mr. J. A. Marshall and Mr. Garland Scroggins, Director and Assistant Director, Agricultural Education, Texas Education Agency provided valuable support and technical advise. Mr. Oscar Millican, Assistant Director, Division of Occupational Research and Development provided administrative guidance and liaison for the project.

Mr. Ed Ney and Mr. Randall Keeling of the Texas Employment Commission generously made available occupational data and provided encouragement and suggestions throughout the study. During all stages of the project, close liaison was maintained with members of the National Committee on Employment Opportunities and Training Needs in Agribusiness which assisted in development of consistent and meaningful guidelines to identify agricultural and related occupations. Comments and suggestions made by Mr. Walter Sellers on an earlier draft are especially appreciated.

Although benefiting greatly from the advise and assistance of the above people, any errors which remain are the sole responsibility of the authors.

PREFACE

Agriculture and the industries which it supports, more commonly known as the agribusiness sector, play an important role in the overall Texas economy. Total value has been estimated at upwards of $10 billion annually. While research relating to total output and capital requirements in Texas agribusiness is well grounded, systematic research relating to employment and human resource needs in agricultural and related occupations is still nascent.

That the term agriculture is no longer synonymous with simply the production of crops and livestock has been known by agricultural leaders for several decades. In the mid 50's the President's Panel of Consultants on Vocational Education recommended that:

> The vocational agriculture program, under Federal reimbursement, should be broadened to include instruction and increased emphasis on management, finance, farm mechanization, conservation, forestry, transportation, processing, marketing the products of the farm, and other similar topics.

The ideas expressed culminated in the passage of Public Law 88-210 in 1963, better known as the Vocational Education Act of 1963.

Furthermore, the increased emphasis on the "world of work" embodied in the concept of career education also points to the expanding awareness of the need for ongoing evaluation of existing instructional programs and development of new courses of instruction at the elementary, secondary and post-secondary levels.

The need for additional in depth data relating to current and projected manpower needs was recognized by The Advisory Council for Technical-Vocational Education in Texas when it recommended that compilation of "labor market data and information....is in all probability one of the most critical needs in the Management and Planning aspects of technical-vocational education in the state of Texas." The report of the Tri-Agency Task Force charged with developing a concept of the overall design of a manpower supply/demand system for Texas also recognized the critical need for data to provide an adequate base for making responsible decisions to meet the future educational and labor force requirements of the state.

This report uses data from the 1970 Census of Population to

provide guidelines for planning curricula in agriculture and its related fields. While oriented primarily towards needs which can be met by educational programs of vocational-agriculture, the results can also be generalized to include the broader aspects of career education at the elementary, secondary and college levels.

MANPOWER REQUIREMENTS IN AGRICULTURE AND RELATED OCCUPATIONS

INTRODUCTION

Over the past three decades agriculture has evolved in the public mind from simply a producer of raw agricultural output to a multifaceted complex of interrelated activities involving the production, processing and distribution of the nation's food and fiber. This complex is assisted by public services relating to conservation of natural resources and by formal and informal programs of education and research. Additionally, the forestry, fishery and recreation industries are closely tied to agricultural processes through efficient conservation and use of natural resources.

The term agricultural and related occupations used throughout the report refers to those occupations in the agribusiness sector defined here as including supply, production and processing and distribution sectors, as well as those occupations in the public sector and in the renewable natural resource sector, in which successful, on the job performance could be enhanced by knowledge of agriculture and agricultural processes (Figure 1).

Figure 1. Agribusiness and Related Industries

Development of Consistent Decision Criteria

To arrive at an acceptable, comprehensive and workable definition of agricultural and related competencies it is necessary to begin with a common source document which has basic acceptance to most people. Working in conjunction with the National Committee on Employment Opportunities and Training Needs in Agribusiness, composed of representatives from the U. S. Departments of Health, Education and Welfare; Agriculture; and Commerce (Bureau of the Census), initial concepts and ideas were developed.

The National Committee provided guidance to each of the states undertaking individual state studies. While the general guidelines and procedures were developed by the National Committee and the special Task Force working with the Committee, each state was encouraged to adapt the results developed at the national level to the conditions existing in the state.

The base document used to define occupations requiring agricultural and related competencies was developed from the agricultural section of the Standard Terminology for Curriculum and Instruction in Local and State School Systems published by the Office of Education. It is reproduced in Appendix I. Eight specific areas of competency are defined by this document as relating to agriculture.

1) agricultural production
2) agricultural supplies/services
3) agricultural mechanics
4) agricultural products
5) ornamental horticulture
6) renewable natural resources
7) forestry
8) other agribusiness

As a part of a national identification procedure, 30 specialists from Texas representing agricultural production and agribusiness, education and government were requested to select agricultural and related occupations within their specialty areas using the above source as a basic reference. The specialists were chosen based on their direct knowledge of agricultural and related occupations and were requested to augment the formal documentation by their own experience.

The occupation and industry classifications used were obtained from the Classified Index of Industries and Occupations, 1970 Census of Population, developed and published by the Bureau of the Census. This classification scheme conforms with industry and occupation data published from the 1970 Census of Population. The 215 industry groupings and 417 occupational groupings contained in the Index represent approximately 19,000 industry and 23,000 occupational titles. Even so, the reduced Census form contains upwards of 90,000 different combinations of industries and occupations.

Meeting in a two day conference November 8 and 9, 1972, the specialists representing the eight areas of concentration outlined above each made selections concerning the relevance of the particular occupation in each industry where the occupation was found.

The work performed by the Texas panel was similar to that done in eight other states. Included in this initial phase, in addition to Texas, were New York, Pennsylvania, South Carolina, Ohio, Minnesota, Iowa, California and Oregon.

The results of these special panels were collated and reviewed by the National Committee in December 1972.

Data Limitations

The data presented in this report are tabulations of results from the twenty percent sample of Texas households taken for the 1970 Census of Population. The employment data reflect the occupational distribution of the work force 16 years of age and older as of the last week in March, 1970. Although other data sources are available which provide estimates of either industry labor force distribution or occupational distribution, the Dicennial Census of Population provides the only comprehensive source of occupational distribution within industries.[1/]

Employment data is also obtained from the Bureau of Labor Statistics establishment surveys, i.e. direct surveys of industry establishments. These data are generally thought to provide greater accuracy than data

---

[1/] The Census questions from which the data in this report are derived are reproduced in Appendix II.

from household surveys since they reflect actual industry employment at a given point in time.[y] Although providing more accurate estimates of industry employment, currently available establishment surveys underestimate total labor force participation since they cover only wage and salaried payrolls in non agricultural industries and include only people actually working during the survey period. Within this limitation there may be a slight overcount to the extent that workers are included on more than one payroll during the survey period.

Slight underestimation of the total labor force also occurs in the Census count. This is due to difficulties involved in definition of the household population from which samples are drawn.

When results from both household and establishment surveys are adjusted for conceptual differences, the household survey data consistently provide lower overall estimates of labor force participation although variations exist between industries. As seen in Table I, estimates from household surveys are lower than corresponding estimates from establishment surveys in mining, wholesale and retail trade and the service sector. They are higher in construction, manufacturing, transportation and public utilities and government. The discrepancy between the two data sources is largest in construction, wholesale and retail trade and services. While the figures in Table I reflect only national labor force estimates they provide an indication of potential discrepancies existing in state data.

---

[y] Christopher G. Gellner, "A 25-Year Look at Employment as Measured by Two Surveys," Monthly Labor Review, Washington, B.L.S., U.S. Department of Labor, July 1973, pp. 14-23. In addition to the Dicennial Census of Population, the Bureau of the Census also conducts monthly surveys of 45,000 households-the Current Population Survey (CPS)-which provides occupation/industry data. These two sources provide the basis for the household employment estimates produced by the Bureau of Labor Statistics.

Table I. Comparison of Employment Estimates from Household and Establishment Surveys, by Industry Groups*

Industry	Comparison of Household Survey Estimates with Establishment Survey Estimates	Percent of Total Labor Force in each Industry (household estimate)
	----------Percent----------	
Mining	- 4.1	.8
Construction	+10.5	5.5
Manufacturing	+ 2.7	27.5
Transportation & Public Utilities	+ 1.3	6.4
Wholesale & retail Trade	- 9.0	20.3
Finance, Insurance & Real Estate	+ .2	5.6
Services	-16.0	15.0
Government	+ .3	18.9
Total	- 2.9	100.0

* The comparisons reflect household survey estimates beginning with 1972. This was the first year that estimates were adjusted to reflect the new totals from the 1970 Census of Population.

Source: Christopher G. Gellner, "A 25-Year Look at Employment as Measured by Two Surveys," Monthly Labor Review, Washington, B.L.S., U. S. Department of Labor, July 1973, pp. 14-23.

The data presented in this report are designed to provide estimates of the proportion of the labor force in which knowledge of agriculture and agricultural processes could improve on-the-job performance. While providing very good estimates of manpower requirements in production related occupations, estimates of employment in the remaining agriculturally related occupations contain both over and underestimates of the true values. Over estimates occur when the individual industry-occupation cell overaggregates employment requirements. For example, all officials of lodges, societies and unions are tabulated in one industry/occupation cell. Over 100 different organizations are represented under this heading, but only officials associated with agricultural organizations such as the

Farm Bureau, Growers marketing services, etc. require agricultural or related competencies. To exclude this occupation group would exclude many hundreds of persons who require very direct knowledge of agriculture in the course of daily business operations. Conversely, agriculture teachers are undercounted since this Census category includes only college level instructors.

A more serious source of undercount occurs in occupations such as recreation and conservation personnel employed by the state and federal government. Although appearing under the general heading of foresters and conservationists the future importance of this employment is underestimated by sole recourse to 1970 Census data.

Census data were adjusted to represent a more accurate occupation estimate in only one situation. Census tabulation combined all secondary school teachers regardless of area of specialty and reported them as a single occupation group. Data obtained from the Texas Education Agency, which included only science and vocational-agriculture teachers, were substituted to provide a more realistic figure.

Finally, when interpretating figures presented in this report it must be acknowledged that employment estimates provide only one criterion for measurement of training requirements. No attempt is made to determine the level or type of agricultural knowledge required in the identified occupations or the methods by which the agricultural competencies involved in each occupation can be obtained. These interpretations fall outside the scope of this report.

The Texas State Employment Matrix

The basic decisions made by the panel of specialists and reviewed by the National Committee were taken as a base for developing Texas agricultural and related occupations. In addition to this base, occupations relating to courses of instruction currently being offered through the Vocational-Agriculture program and in Colleges of Agriculture in the state were used to provide additional guidelines concerning the definition of an agricultural and related occupation.[3/]

3/ See Appendix IV for a list of the areas of instruction in vocational agriculture currently being offered in Texas.

Of the 215 industry groupings and 417 occupational groupings, defined by the Bureau of the Census, a total of 141 different occupations in 172 different Texas industries were identified as including people requiring agricultural or related competencies. This reduces the decision matrix by approximately three-quarters or to slightly less than 25,000 potential occupation/industry combinations.

For ease of presentation, occupations are grouped by the following criteria:

Group I---Occupations that require or utilize agricultural or related competencies in any industry in which they are found.

Group II--a) occupations that require or utilize agricultural or related competencies only in selected industries, or b) occupations within selected industries in which only a portion of the workers require agricultural or related competencies.

A major problem with the development of manpower data sufficiently precise for use in educational planning lies in the difficulty of relating employment needs jointly by occupations and industry. Identification of those occupations requiring agricultural or related competencies across all industries wherever they may exist is a more difficult task than simple determination of total employment in industries which have previously been defined as agribusiness. The matrix approach used to present the Census of Population data is the most direct method of arriving at this cross comparison.

It should be noted that this classification scheme uniquely separates occupations into either Group I or Group II. Nineteen individual occupations were identified in Group I with an additional 122 occupations in Group II. The occupations are further grouped by importance of agricultural and related occupations in total industry employment to provide easier identification of the major concentrations of agricultural and related employment.

AGRICULTURAL AND RELATED EMPLOYMENT IN TEXAS

To gain a perspective of the importance of agricultural and related employment within the occupations identified as including workers requiring agricultural or related competencies, the discussion in this chapter will utilize the importance of employment within industries as an aid to classifying agricultural or related employment. Because of the data limitations described earlier, not all employment in occupations defined as agricultural and related actually requires agricultural or related competencies. It is reasonable to assume however, that a much larger proportion of employment in identified occupations requires agricultural or related competencies when occuring in industries with a close association to agricultural production than when found in industries with more tenuous ties to agricultural production. Employment was therefore classified into five industry groups based on the proportion which employment in agricultural and related occupations is of total industry employment.

Agricultural and Related Employment within Industry Groupings

Of the 172 individual industries identified as having agricultural or related employment, 77 industries had employment in both Group I and Group II with the remaining 95 having occupations only in Group I or only in Group II (Table II).

It is also seen from Table II that the 77 industries with Group I and Group II employment account for 94 percent of the estimated 514,382 employees in occupations requiring agricultural or related competencies in 1970. Of this total, 207,817 or 40 percent were in Group I employment.

Almost half of the total employment in occupations identified as agricultural or related was concentrated in the 12 industries in which agricultural and related employment made up 50 percent or more of total industry employment. Almost 90 percent of the employment in these 12 industries was concentrated in ten industries having about three-quarters or more of their employment defined as agricultural or related (Table III). Because of the heavy concentration of employment

Table II. Summary Distribution of Major Industries With Agricultural and Related Occupations, Texas, 1970.

Percent Agricultural and Related Employment of Total Industry Employment	Number of Industries	Group I Agricultural and Related Employment	Group II Agricultural and Related Employment	Sum of Group I and II Employment
Greater than 50%*	12 (7.0)	180,001 (86.6)	68,802 (22.4)	248,803 (48.4)
25% to 49.9%*	16 (9.9)	10,858 (5.2)	105,744 (34.5)	116,602 (22.7)
10% to 24.9%*	17 (9.9)	7,441 (3.6)	71,413 (23.3)	78,854 (15.3)
Up to 10%*	32 (18.0)	2,632 (1.3)	38,731 (12.6)	41,363 (8.0)
All others with either agricultural or agriculturally related occupations	95 (55.2)	6,885 (3.3)	21,875 (7.1)	28,760 (5.6)
Totals	172 (100)	207,817 (100)	306,565 (100)	514,382 (100)

*Includes only industries with both Group I and Group II agricultural and related occupations.

directly associated with agricultural production, services and allied primary products almost three-quarters of the employment in the 12 industries on Table III is identified as Group I employment. However, the food processing and related products industry provided the second largest number of opportunities in occupations classified as agricultural or related.

Industries with agricultural and agriculturally related occupations with 25 to 49.9 percent of all industry occupations are listed in Table IV. The distribution of Group I and Group II type employment is almost the reverse of that indicated for industries with half or more of total employment in agricultural or related occupations. Over 90 percent of the estimated employment is identified as Group II employment. Industries included in Table IV are heavily oriented toward tertiary service industries related to agriculture, fisheries and forestry, and include farm machinery and equipment, canning preservation and distribution of farm products, real estate, credit agencies and business management and consulting firms. In addition, non-profit membership organizations, which include agricultural trade associations and farm organizations and state public officials are included in this group.

Table V lists industries with less than 25 percent, but more than 10 percent of total employment identified as agricultural or related. The 17 industries are similar to the industries in Table IV in that they provide services to the primary agricultural, fisheries and forestry sector. In addition, occupations in recreation and entertainment industries are included in Table V. Persons employed in local and Federal government are also included.

The remaining industries in which both Group I and Group II employment are found are listed on Table VI. While accounting for almost 25,000 employees who may require agricultural or related competencies, this employment is spread over 31 different industries. Relevant occupations include sales personnel who may have direct business associations with agricultural production firms, employment related to conservation and environmental protection, as well as employment associated with conservation of land and water resources as by-products of the extractive industries. In other cases management positions will be included in this list. Additionally, draftsmen or engineers in

*Includes only industries with Group I and Group II agricultural and related occupations.
**The expanded estimate was less than 25. The estimated values are included however, in the remaining industry entries. Because of this redistribution, the column totals presented do not equal the sum of the column entries.

manufacturing industries who are responsible for equipment design and performance require understanding of agricultural and related processes in order to develop equipment required in mechanized agriculture.

Of the remaining industries in which only Group I or Group II employment was identified, the dominant occupation cited is that of gardeners and groundskeepers. They are scattered over 127 industries with almost 20,000 employees included in this category. Turf management employees are included as a sub classification.

Agricultural and Related Occupations
Within Occupation Groupings

Viewing occupational distributions within an industry context is suggestive of the overall importance of agricultural and related employment in the industry. The distribution of occupations within each of the four major industry groupings provides the framework for a more detailed discussion in this section of the type of competencies required. Whereas in the previous section the importance of agricultural and related employment was determined relative to total industry employment, in this section occupational importance within each of the four major Group II industry classifications will be discussed. Agricultural and related employment will be compared with total employment in each respective occupational classification for Group II occupations. Because of the close relationship of Group I employment to agricultural production and, by definition, the inclusion in Group I of only those occupations in which all occupation/industry combinations could be identified as agricultural or related, this employment will also be considered as a separate group.

Group I Employment

A large proportion of Group I employment is composed of direct agricultural production related employment as shown in Table VII.

Over three quarters of these workers are either farmers or employed by farmers, with an additional 12 percent associated with marine industries, veterinary aides or other assistants in the care of livestock and animals and gardeners and groundskeepers. Meat cutters

*The Census of Agriculture reports 133,216 operators of part-time and retirement farms and farms with total agricultural sales of less than $5,000 in 1969. Farms with sales of $5,000 or more totaled 80,254 which compares favorably with the Census of Population figures. The 133,216 figure represents the maximum under-count of farmers and farm operators by the Census of Population and occurs because of differences in sample design and Census orientation. The employment data from the Census of Population reflects the major time spent in a job. The Census of Agriculture counts all farm operators with no regard to major source of earnings.

The Census of Agriculture further estimates that 128,269 farm operators reported non-farm earnings of which 100,329 reported at least 100 days of non-farm employment. Some of this employment may already be included in the agricultural and related employment presented in this report, and hence should not be recounted.

and butchers provided employment for over thirteen thousand persons in 1970 and constitutes an important occupation group.

Slightly over five thousand professional, technical and kindred workers, or about 2.4 percent of total Group I employment in these occupations were identified. This number represents an underestimation of teachers requiring knowledge of agricultural or related processes due to the Census classification scheme. Others are included under the general heading of secondary schools and colleges and universities and appear as Group II employment.

As noted in the footnote to Table VII, a smaller number of farmers is identified by the Census of Population than by the Census of Agriculture. This is primarily due to a difference in definition by the two Censuses. The figure estimated by the Census of Population includes only persons whose major employment was in production agriculture while the Census of Agriculture figure includes operators of part time and retirement farms who also receive additional outside income. Technically, a portion of the additional 133,216 persons should also be included within the general Group I framework. However, since it is not known how many are primarily employed in other agriculturally related occupations, none are included in order to eliminate the possibility of double counting. It is interesting to note that when identified by major source of employment, farm wage and salaried workers outnumber self employed farmers and tenants.

Group II Employment

Whereas most of the occupations listed under Group I are related to agricultural production, employment in Group II occupations is more heavily oriented toward management, administration and sales. Employment in agricultural occupations included in Table VIII reflects the employment distribution in industries with at least 50 percent of total employment previously classified as agricultural and related. Tables IX and X present the employment distribution in industries with 25-49.9 percent and 10-24.9 percent of total employment in agricultural or related occupations and Table XI employment in industries with less than 10 percent of total employment in agricultural or related occupations.

A major assumption implied in the organization of data as presented above, is that the accuracy of employment estimates for persons requiring agricultural and related competencies is greater for occupations in industries with a higher proportion of total employment in these occupations than in those industries with a smaller percentage of total employment in agricultural and related occupations. The highly aggregated industry and occupation Census classifications may overestimate actual agricultural and related employment in certain industry/occupation cells in which specific agriculturally related jobs are included with many non agricultural variations of the same occupation.

For example, 3647 airplane pilots were identified in industries which could have hired aerial applicators for crop dusting purposes. But only 416 were identified in the agricultural production and agricultural service sectors, both with 50 percent or more of total employment identified in agricultural and related occupations. Therefore it can be safely assumed this represents an accurate estimate of aerial applicators in these industries. The remaining 3231 pilots were employed by firms in the air transportation industry which are included in industries with 10-24.9 percent of total employment in agricultural and related occupations. While highly conceivable that some of these pilots were employed as aerial applicators the true number is perhaps only a small fraction of the total employment of airplane pilots. However, without recourse to specific industry data the exact total is unobtainable. With the exception of secondary teacher classification, for which supplementary data were readily available, the total industry employment is reported as it appears on the Census printout.

A total Group II employment of 68,802 was estimated in industries with at least 50 percent of total employment in agricultural or related occupations (Table VIII). Managers, administrators, sales workers and operatives constituted almost two/thirds of this total. Professional, technical and kindred workers made up only a very small proportion (about 2 percent) of total employment in these industries. The total employment of 68,802 in the agricultural and related occupations included in Table VIII

**Less than 25. The total includes all values and is therefore greater than the sum of the occupation estimates.

was only 3.6 percent of all employment in the identified occupations.

Included under the general heading of managers and administrators are persons employed in agricultural and horticultural services, agricultural production, meat products, food and other related farm products. Managers in logging, fishery and marine industries, hardware, garden and farm supply stores, and retail florist shops are also included in the total count of 9593. In addition, 3576 sales managers, shipping agents and purchasers are employed in these industries.

Similar to the occupation cluster of managers and administrators, 15235 sales workers and 11548 clerical workers are employed in industries handling agricultural or related products. As seen in Table III, (page 11) the twelve industries with employment in agricultural or related occupations totaling at least 50 percent of industry employment are all very closely associated with agricultural production. This suggests that virtually all of the estimated 68,802 workers employed in agricultural and related occupations require agricultural or related competencies as a necessary part of their overall job performance.

The largest block of Group II employment, 105,744, was identified in industries with 25 to 49.9 percent of total employment in agricultural or related industries, (Table IX). This is about 5½ percent of all employment in the identified occupations. Due to overaggregation of data, several occupational clusters appear to overcount agricultural or related employment. Most accountants listed are employed by business management and consulting firms, of which only a small percentage require agricultural or related competencies. The identified personnel and labor relations workers are employed as state officials. While very few would have been associated with agriculture in 1970, the importance of this occupation within agriculture will most likely increase in the current decade.

The occupations of creditmen and officials of lodges, societies and unions are both overestimated; the overestimation in the former is perhaps greater than in the latter. A more precise estimate is not possible in either case since employment presented is associated with only one industry group.

The classification of managers and administrators, while somewhat

**Less than 25. The total includes all values and is therefore greater than the sum of the occupation estimates.

overestimated none-the-less provides a reasonably good estimate of agricultural or related employment. Almost two/thirds of the total are grocery store managers. Managers, as distinct from clerks, require and often receive training in management and economics in courses included in curricula in Colleges of Agriculture. Most of the remaining employees in this occupation cluster are employed by firms providing services to or processing of agricultural, fishery or forestry products.

The figure of 43,532 real estate agents and brokers appears at first glance to be highly overstated in relation to agricultural and related competencies. However, recent developments in rural land markets and a more active research role in real estate economics by the Texas Real Estate Research Center at Texas A&M University must be cited as evidence for inclusion of this occupational group. Over 15,000 real estate agents were estimated for 1970 with an additional 683 appraisers. Finally, machine operatives is singled out as a potential over estimate of agricultural or related employment. However, a majority of these workers are employed in the forestry, forest products and food industries thereby requiring agricultural or related competencies.

While not all of the 105,744 employees in occupations identified as agriculturally related require agricultural or related competencies it is reasonable to conclude that between 50 percent and 75 percent require some knowledge of agricultural processes as a part of their employment requirements or between 50,000 and 80,000 persons.

Table X presents the occupational distribution in industries with employment in agricultural or related occupations of 10 to 24.9 percent of all indsutry employment. The estimated 71,413 employees is slightly less than 4 percent of total employment in the included occupations. Over 80 percent were included in the professional, technical and kindred, and managers and administrators classifications, compared with only 40 percent of employment in these classes in industries with 25 to 49.9 percent of total employment in agricultural and related occupations. However, these estimates are considered by the authors to contain a large element of overestimation.

Overcounting of architects, engineers, personnel and labor relations workers, airplane pilots, public administration, bank officers and school

administrators is evident. Only tenuous ties to agriculture can be developed for most of the clerical and kindred workers although some of the 2986 enumerators and interviewers in federal employment are associated with agricultural crop surveys and therefore require extensive agricultural knowledge. All identified clerical workers are employed by local governments and few would require knowledge of agriculture or related subjects as a part of their normal responsibilities.

The occupation cluster of athletes and kindred workers however, is a valid occupation since it includes animal handlers in amusement parks and race tracks. Overall, based upon the limited importance of agriculture in the industries included in Table X, agricultural or related employment is estimated at 20 percent of total identified employment, or about 15,000 persons. This is less than 1 percent of all employment in the identified occupations.

Similar to employment figures for industries with 10-24.9 percent of total employment identified in agricultural and related occupations only part of identified employment in industries with less than 10 percent of total employment in agricultural or related occupations requires knowledge of agricultural competencies. However, several important occupational clusters are included in the data presented in Table XI.

Almost 13,000 secondary school teachers including teachers of vocational agriculture and biology are counted in addition to 2669 vocational and educational counselors. These two occupations represent 40 percent of the total identified employment on Table XI. Based on these figures, a conservative figure of 20,000 total employees requiring some degree of agricultural or related competency appears reasonable.

SUMMARY AND RECOMMENDATIONS

Summary

Development and evaluation of vocational education programs requires knowledge of current and projected occupations which utilize the competencies gained from instructional programs. Because of the increasing interrelationships involved in the production, processing and distribution of agricultural products many persons in this chain, in addition to persons in the production sector, require competencies gained through instructional programs of vocational agriculture. Programs of technical and professional training beyond the secondary level are also requisite for many of these positions. While not difficult to estimate the potential training requirements in the production sector alone, identification of occupations in allied industries involves a detailed search over all occupations and industries.

Employment, both private and public, in areas of conservation and restoration of renewable natural resources such as land and water also utilize competencies basic to farm and ranch management and thereby qualify for inclusion under the general heading of agriculture. Additionally, occupations in the forestry, horticultural and fisheries industries utilize competencies associated with the production of food and fiber.

The Standard Terminology for Curriculum and Instruction in Local and State School Systems, published by the Office of Education was used as a standard reference to determine occupations which may require agricultural or related competencies. This was supplemented by the experience of agricultural and agribusiness specialists in nine states, including Texas, who evaluated job titles used in classifying survey employment data for the 1970 Census of Population. After compilation and re-evaluation by the interdepartmental National Committee on Employment Opportunities and Training Needs in Agribusiness, the selected occupations and industries were further evaluated within the context of Texas agriculture.

For ease of presentation, agricultural and related employment was grouped by the following criteria:

Group I---Occupations that require or utilize agricultural or related competencies in any industry in which they are found.

Group II--a) Occupations that require or utilize agricultural competencies only in selected industries, or b) occupations within selected industries in which only a portion of the workers require agricultural or related competencies.

Using these criteria, 141 occupations existing in 172 industries were identified as containing employment requiring agricultural or related competencies. Of a total 1970 labor force of 4,141,529, about 12½ percent or 514,382 persons were employed in occupations meeting the Group I or Group II criteria. These figures do not include 133,216 operators of part time and retirement farms identified by the Census of Agriculture who obviously require agricultural competencies. They were not included because of the possibility of double counting. Double counting would occur to the extent that these people are also employed in off farm jobs requiring agriculturally related competencies.

Employment in Group I occupations which are closely associated with agricultural production totaled 207,817 persons in 1970. An additional 68,802 persons required agricultural and related competencies in twelve related service industries and accounted for almost 90 percent of the employment in these industries. Only a portion of the remaining 237,763 persons employed in occupations requiring agricultural and related competencies actually require and utilize these competencies in the normal course of their employment. Data limitations prevent a precise estimate without bringing in additional judgmental factors. In the opinion of the authors approximately one half of these workers would require agricultural or related competencies. This suggests that about 400,000 persons required agricultural or related competencies in Texas in 1970.

Recommendations

Analysis of the employment counts from the 1970 Census of Population leads to several implications for increased training and educational

needs for that portion of the Texas labor force requiring agricultural or related competencies. Although additional training is required for occupations in rapidly expanding industries, more indepth training in existing fields of instruction is also important.

Production agriculture

Production agriculture, while becoming less labor intensive will in the future, require higher quality of human input. With a technologically dynamic agriculture this means that vocational-agriculture instructional programs will require constant evaluation and revision to assist in the training of this manpower. Additional programs of adult education stressing farm record keeping and farm equipment maintenance and operating safety is encouraged.

A larger number of wage and salaried workers than self employed operators identified agriculture as their major source of employment. Almost 90,000 wage and salaried persons were tabulated by the 1970 Census of Population compared with 73,536 farm operators and tenants who spent over half of their time in farming operations. New courses of instruction dealing with farm personnel management and increased emphasis on occupational safety is encouraged.

Land economics and real estate

Emphasis on land conservation practices relating both to agricultural and non agricultural land use is recommended. The establishment of the Texas Real Estate Center at Texas A&M University provides a new resource for developing courses of instruction in land management and appraisal.

Gardeners and Groundskeepers

The existence of almost 20,000 gardeners and groundskeepers in Texas suggests that further study should be undertaken to determine the feasibility of expanding cooperative education offerings in landscape and grounds maintenance. Gardeners and groundskeepers are employed in over 125 industries in Texas. The continuing emphasis on environmental beauty suggests that higher skilled employees will be required in the future.

Texas will continue to be one of the major agricultural states in the nation. Agriculture and related occupations will continue to provide an important source of income for many Texans. Although total employment in agricultural production will continue to decline as agriculture becomes less labor intensive, the quality of training and overall educational attainment of agricultural manpower must be continually upgraded in order to maintain a viable and competitive agricultural and rural economy.

Moreover, employment opportunities in off farm, agriculturally related occupations will undoubtedly increase. Only a few of the possibilities for expanded instructional offerings in these newer fields have been discussed in this report. However, the data developed for the report provide the necessary base for further evaluation of these possibilities in forthcoming publications.

APPENDIX I

A Guide for Defining Agricultural and Related Competencies

A Guide for Defining Agricultural and Related Competencies[1/]

I. Summarized definition of agribusiness occupational competencies. Skills in and knowledge of 1) agricultural production - the production and propagation of animals (land and aquatic), animal products, plants (crops and ornamental), plant products and forests and forest products; and the provision of services associated with agricultural production; 2) the manufacture, distribution and servicing of supplies used in agricultural production; 3) the designing, installation, repair, operation and servicing of machinery, equipment and power sources and the construction of structures and conveniences used in agricultural production; 4) the inspection, processing and marketing of agricultural products and primary by-products; 5) aspects of greenhouse, nursery, landscaping and other ornamental horticultural operations; 6) the conservation, propagation, improvement and utilization of renewable natural resources; and 7) the multiple uses of forest lands and resources.

II. Detailed definition of agribusiness competencies

A. AGRICULTURAL PRODUCTION - Skills in and knowledge of the production of plants, animals and their products.

1. Animal science - Skills in and knowledge of the production of animals and animal products.

a. Animal propagation and production - Knowledge of animals produced for food, fiber and other purposes.

1) Animals produced for food and fiber - Knowledge of cattle, swine, sheep, poultry, fish (see also II.F.7. Fish) and other animals produced for food and fiber.

2) Other animals - Knowledge of pets, wildlife (see also II.F.4. Wildlife), laboratory animals and other animals produced and propagated for purposes

---

1/ This definition has been adopted by the National Committee on Employment Opportunities and Training Needs in Agribusiness from Standard Terminology for Curriculum and Instruction in Local and State School Systems, HEW, Office of Education, 1966

other than food and fiber.

b. Nutrition - Knowledge of the relationship of proteins, fats, carbohydrates, water, minerals and vitamins in the production of meat, milk, eggs and wool.

c. Genetics - Knowledge of the principles of inheritance and their applications for the breeding and selection of animals.

d. Physiology - Knowledge of the body processes and functions related to the production of animals and animal products (eg. lactation, reproduction, egg production, digestion, growth and wool production).

e. Animal health - Skills in and knowledge of the prevention and control of animal diseases and the treatment of injuries to animals.

f. Production management - Skills in and knowledge of the operation and management of a farm, ranch or other establishment involved in the production of animals and animal products.

1) Feeding practices - Knowledge of the "least cost" combinations of feed ingredients for achieving maximum quality and quantity in production.

2) Housing practices - Knowledge of the housing and other environmental needs of specific kinds of animals.

g. Other animal science - Competencies, not elsewhere included, in the propagation and production of animals and animal products.

2. Plant science - Skills in and knowledge of the production of plants and the products derived from plants.

a. Plant culture and production - Knowledge of plants produced for food, fiber and other purposes.

1) Crops produced for food and fiber - Knowledge of cereal grain crops, fiber crops, forage crops, oil crops, tree fruit and nut crops, small fruit and berry crops, vegetable crops and other crops produced for food and fiber.

2) Other plants - Knowledge of shrubs, trees, flowers, turf and other plants cultivated and produced for ornamental, esthetic and other purposes except for food and fiber (see also II.E. Ornamental horticulture); and forest trees and forestry products (see also II.G. Forestry).

b. Soils - Knowledge of the physical, chemical, biological and fertility properties of soils in relation to their management for crop and other agricultural production operations.

c. Nutrition - Knowledge of the nutrient and soil fertility requirements of plants.

d. Genetics - Knowledge of the principles of inheritance and their applications for the breeding and selection of plants.

e. Physiology - Knowledge of the life processes in plants and their implications in the production of plants and plant products.

f. Plant disease and pest control - Knowledge of the symptoms, causes and control of plant injuries and diseases; the impace and control of beneficial and harmful insects, nematodes, snails, mites, rodents and birds in relation to agricultural production; and the control of undesirable forms of plant life.

1) Insecticides and rodenticides - Knowledge of and skills in the use of substances used to destroy or otherwise control harmful insects, rodents and other plant pests.

2) Fungicides, bactericides, viricides and nematocides - Knowledge of and skills in the use of substances used to destroy or inhibit bacteria, viruses and other causes of plant diseases.

3) Herbicides - Knowledge of and skills in the use of compounds used to destroy or inhibit the growth of selected plants.

4) Nonchemical and other methods of controlling plant

diseases and pests - Knowledge of biological, mechanical, cultural and other methods of control.

g. Environmental biology - Knowledge of the interaction of plant life processes with factors of the environment and their characteristics and implications for managing plant production.

h. Other plant science - Competencies, not elsewhere included, in the culture and production of plant and plant products.

3. Agricultural mechanics - (See II.C. Agricultural mechanics).

4. Agricultural business management - Decision-making skills in and knowledge of production efficiency and resource analysis, accounting, finance and other business management factors applied to agricultural production operations.

a. Accounting - Skills in accounting, including tax accounting, as applied to agricultural production operations.

b. Efficiency analysis - Skills in the use of performance records in determining and analyzing the efficiency of an agricultural production operation.

c. Agricultural economics - Skills in budget analysis and the use of quantitative input output relationships, costs and price expectations to secure optimum economic returns for agricultural production operations.

d. Manpower utilization - Decision-making skills in and knowledge of the economic use and management of labor resources.

e. Purchasing and marketing - Skills in purchasing agricultural production input (such as livestock, seed, machinery, etc.) and marketing animal and plant products for agricultural production operations.

f. Financial and legal management - Knowledge of the financial and legal aspects of managing an agricultural production business, such as agricultural loans and credit.

g. Agribusiness organizations - Knowledge of current programs of agribusiness organizations, including their development, purposes and usefulness.

h. Government programs - Knowledge of current government policies, regulations and programs available to and having influence upon agricultural production, management and prices and income of rural people.

i. Other agricultural business management - Competencies, not elsewhere included, in the business management of agricultural production operations.

B. AGRICULTURAL SUPPLIES/SERVICES - Knowledge of and skills in the production, processing, distribution and use of consumable supplies used in the production of animals, plants and their products; and the provision of services associated with the distribution of such supplies. Examples are agricultural chemicals, feeds, seeds and fertilizers (plant food).

C. AGRICULTURAL MECHANICS - Knowledge of the power, machinery, tools, equipment, structures and conveniences utilized in the production of animals, plants and their products; and skills in soil and water management for agricultural production.

1. Agricultural power and machinery - Knowledge of and skills in the selection, operation, servicing, maintenance, repair and safety of agricultural power -- engines, electricity and hydraulics; and the planning, installation, servicing, assembling, adjusting, operating, repairing and distribution of agricultural machinery.

2. Agricultural structures and conveniences - Knowledge of and skills in the planning, selection of materials for and construction and maintenance of agricultural structures and conveniences.

3. Soil management - Knowledge of and skills in surveying and classifying soils; determining cropping systems and fertilizer; and conditioning and cultural practices for increasing agricultural production efficiency.

4. Water management - Knowledge of and skills in surveying, planning, laying out, constructing, using and maintaining irrigation, drainage, water conservation, runoff and erosion control systems; and maintaining proper soil-water-plant relationships.

5. Agricultural tools and equipment - Knowledge of and skills in the planning, fabrication, selection, use, maintenance and distribution of agricultural hand and power tools and equipment and the planning and establishing of home farm shops.
6. Agricultural electrification - Skills in making effective use of electricity and electrical equipment in agricultural production operations.
7. Other agricultural mechanics - Competencies, not elsewhere included, in the mechanical aspects of agricultural production.

D. AGRICULTURAL PRODUCTS - Skills in the inspection, sorting, grading and storing of and knowledge of the use, nutritive value and other qualities of agricultural products (in their original state of production) and primary by-products (in the first processed stage), including the processing of agricultural products. Also, skills in the marketing of agricultural products and primary by-products when combined with other agricultural product competencies, for operations other than agricultural production (compare II.A.4.e Purchasing and marketing). Included are food products such as meat, milk, cheese, fruit, grain and oilseeds; and nonfood products such as cotton, tabacco, wool, furs and wood.

1. Food products and primary by-products - Knowledge of and skills in the preparation and processing of food products and primary by-products for sale and consumption and knowledge of the nutritive value of such products.
   a. Food products - Knowledge of the information, processes and science and decision-making skills associated with meats, fish, poultry, eggs, milk, fruits, vegetables, cereal grains, oilseeds, mushrooms, nuts, sugar, sap and other food products.
   b. Primary food by-products - Knowledge of the information, processes and science and decision-making skills associated with the primary by-products of the food products listed above, such as cream, ice cream, butter, cheese, flour,

cottonseed oil, alcohol and syrup.

2. Nonfood products and primary by-products - Knowledge of and skills in the processing, inspection, grading, sorting and storing of nonfood products and primary by-products for domestic and industrial uses.
   a. Nonfood products - Knowledge of and skills in processing, marketing and other activities involving nonfood products, such as ginning and baling cotton, grading and storing tobacco, sorting and grading wool and other nonfood products such as furs, hemp, gum and wood.
   b. Primary nonfood by-products - Knowledge of and skills in processing, marketing and other activities involving primary nonfood by-products, such as cotton yarn, wool yarn, processed tobacco and wood pulp.
3. Other agricultural products - Competencies, not elsewhere included, associated with agricultural products and primary by-products.

E. ORNAMENTAL HORTICULTURE - Knowledge of and skills in the culture of plants used principally for ornamental and esthetic purposes, including establishing, maintaining and managing ornamental horticulture enterprises.

1. Arboriculture - Knowledge of and skills in the culture and maintenance of woody plants used for decoration and shade purposes.
2. Floriculture - Knowledge of and skills in field or greenhouse production of flowers and the arrangement of such flowers for ornamental purposes.
3. Greenhouse operation and management - Skills in and knowledge of producing plants under glass and in other artificial environments.
4. Landscaping - Knowledge of and skills in locating, planting and maintaining turf, plants, shrubs, trees or devices for the beautification of home grounds and other areas of human habitation and recreation.
5. Nursery operation and management - Knowledge of and skills in the production of turf, plants, shrubs and trees for

purposes of transplanting or propagating them.

6. Turf management - Knowledge of and skills in establishing, managing and maintaining grassed areas for ornamental and recreational purposes.
7. Other ornamental horticulture - Competencies, not elsewhere included, associated with ornamental horticulture production, processing, marketing and services.

F. RENEWABLE NATURAL RESOURCES - Skills in and knowledge of the conservation, propagation, improvement and utilization of renewable natural resources such as air, forests, soil, water, fish, plants and wildlife, for economic and recreational purposes.

1. Forests - Skills in and knowledge of the conservation, propagation, improvement and utilization of forests for economic and recreational purposes (see also II.G. Forestry).
2. Recreational use of natural resources - Skills in and knowledge of the multiple uses of land, water and other natural resources for recreational activities such as fishing, picnicking, hunting, camping and nature study.
3. Soil - Skills in and knowledge of maintaining soil stability and productivity including the prevention of erosion, pollution, water logging, exhaustion of plant nutrients and the accumulation of toxic salts.
4. Wildlife - Skills in and knowledge of the propagation, preservation and improvement of wildlife, such as used in the operation of game farms and commercial hunting enterprises and the management of hunting areas (see also II.A.1.a.2. other animals).
5. Water - Skills in and knowledge of water conservation practices such as the prevention of soil erosion and water pollution; flood control; aquatic weed control; and the development, conservation and management of water supplies for agricultural, domestic, industrial and recreational purposes.
6. Air - Knowledge of and skills in the control of air pollution, including the effects of agricultural activities

on pollution and the effects of pollution on plants and animals.

7. Fish - Skills in and knowledge of the propagation, rearing, stocking and management of fish in public and private waters, such as used in fish farming and hatchery operations and commercial fishing enterprises (see also II.A.1.a.1. Animals produced for food and fiber).
8. Range - Skills in and knowledge of the preservation and improvement of natural range lands.
9. Other renewable natural resources - Competencies, not included elsewhere, associated with the conservation, propagation, improvement and utilization of renewable natural resources.

G. Forestry - Skills in and knowledge of the multiple uses of forest lands and resources, including their protection and management for economic and recreational purposes and related services.

1. Forestry production and propagation - Skills and competencies in the propagation of forest trees, including Christmas trees and the production of forest products, including initial collective activities such as harvesting trees and transporting logs (see also II.A.2.a.2 Other plants).
2. Forest protection - Knowledge of the behavior of and skills in the control of elements harmful to forests and forest resources (see also II.F.1. Forests).
3. Forest products - Skills in and knowledge of the processing, selection, grading and marketing of wood, gum, sap, nuts and other forest raw materials (see also II.D. Agricultural products).
4. Primary forest by-products - Skills in and knowledge of the processing, marketing and other functions associated with maple syrup, wood pulp and other forest by-products in the first processed stage (see also II.D. Agricultural products).
5. Recreational use of forest lands - (see II.F.2 Recreational use of natural resources).
6. Other forestry - Competencies, not included elsewhere, associated with the multiple uses of forest lands and resources.

H. OTHER AGRIBUSINESS - Competencies, not included elsewhere, associated with agricultural production, supplies/services, mechanics and products; ornamental horticulture; renewable natural resources; and forestry.

APPENDIX II

Census of Population Reference Questions

The occupation and industry data were obtained from answers to questions 33-35 of the 1970 Census of Population. These questions are reproduced below:

Census of Population Reference Questions

33-35. Current or most recent job activity or business.
Describe clearly your chief job activity or business last week, if any. If you had more than one job, describe the one at which you worked the most hours.
I you had no job or business last week, give information for last job or business since 1960.

---

33. Industry

a. For who did you work? *If now on active duty in the Armed Forces, print "AF" and skip to question 37.*

(Name of company, business, organization, or other employer)

b. What kind of business or industry was this?
Describe activity at location where employed.

(For example: Junior high school, retail supermarket, dairy farm, TV and radio service, auto assembly plant, road construction)

c. Is this mainly -- *(Check one box)*

- ☐ Manufacturing
- ☐ Wholesale trade
- ☐ Retail trade
- ☐ Other *(agriculture, construction, service, government, etc.)*

---

34. Occupation

a. What kind of work were you doing?

(For example: TV repairman, sewing machine operator, spray painter, civil engineer, farm operator, farm hand, bulldozer operator, junior high English teacher)

b. What were your most important activities or duties?

(For example: Types, keeps account books, files, sells cars, operates printing press, cleans buildings, finishes concrete)

c. What was your job title?

---

35. Were you -- *(Check one box)*

- ☐ Employee of private company, business, or individual, for wages, salary, or commissions
- ☐ Federal government employee
- ☐ State government employee
- ☐ Local government employee (city, county, etc.)

Self-employed in own business, professional practice or farm -

- ☐ Own business not incorporated
- ☐ Own business incorporated
- ☐ Working without pay in a family business or farm

The questions obtained information from the employed, the experienced unemployed and the experienced workers not in the labor force. The reference week for the requested information from employed persons was the last full week in March 1970. For the unemployed persons and those in the experienced out of labor force the information was obtained for the most recent position. If a worker was employed at two or more jobs during the reference week, the only job recorded was the one in which he worked the greatest number of hours.

APPENDIX III

Advisory Committees on Agricultural and Related Occupations

A. National Committee on Employment Opportunities and Training Needs in Agribusiness

B. Texas Committee on Employment and Training in Agribusiness

C. Panel of Agribusiness Specialists, Texas

A. National Committee on Employment Opportunities and Training Needs in Agribusiness[1]

Maurice L. Hill
Rural Manpower Service

U. S. Department of Agriculture

Glenn Z. Stevens, Head
Department of Agricultural Education
Pennsylvania State University

1/ As constituted June 1972

B. Texas Committee on Employment and Training in Agribusiness

J. A. Marshall
Director
Agricultural Education
Texas Education Agency (Chairman)

H. O. Kunkel
Dean
College of Agriculture
Texas A&M University

John C. White
Commissioner
Texas Department of Agriculture

W. J. Hood
Chief
Rural Manpower Development
Texas Employment Commission

C. Panel of Agribusiness Specialists, Texas

D. A. (Andy) Anderson
Texas Forest Service
Texas A&M University

Chesley Auten
Lake Whitney State Park

John Barnes
Farmers Home Administration

Sam Barnes
Central Power and Light

Paul Sweetland
U. S. Forest Service

Dale E. Elms, President
Elms Equipment Company, Inc.

H. J. Ewald, Jr.
Red Ewald Fiber Glass

Mark Fowler, Chairman
Department of Ag. Economics
Texas Tech University

B. W. Glade
Southland Paper Mills, Inc.

Robert Gooch, Vice President
Gooch Packing Company

Frank Gross, Manager
Texas Valley Citrus Committee

Bluefford G. Hancock
Plant Sciences Department
Texas A&M University

Larry Hunt
Placement Department
Texas Employment Commission

Alton Ice, Executive Director
The State Advisory Council of
Technical-Vocational Education

Ira Kiker
Public Relations Department
Safeway Incorporated

Reese Killion, Vice President
Wolfe Wholesale Florist

Bill Lane
Farmer

Gordon McKee, Soil Scientist
SCS - USDA
First National Life Building

Wilbert Meischen, Executive
Director
Vocational Agriculture Teachers
Association of Texas

Robert (Bob) G. Merrifield, Head
Department of Forest Science
Texas A&M University

Howard Mitchell
Texas Ag. Limestone Association

Clemon Montgomery
Assistant Director, Marketing
Division
Texas Department of Agriculture

Kenneth Nelson
Temple Industries

J. H. (Tony) Price
Executive Director
Texas Cotton Ginners Association

Wilmer Smith
Farmer

E. R. Wagoner, Ex. Vice President
Texas Forestry Association

Texas A&M University

APPENDIX IV

Courses of Instruction in Vocational-Agriculture in Texas, 1971

Courses of Instruction in Vocational-Agriculture
in Texas, 1971

I. Production Agriculture

01.01 00 Agricultural Production
01.01 10 Vocational Agriculture I
01.01 20 Vocational Agriculture II
01.01 30 Vocational Agriculture III
01.01 40 Vocational Agriculture IV

II. Agricultural Cooperative Part-Time Training

01.01 00 Agricultural Production
01.01 11 Ranch Employee
01.01 21 Dairy Farm Worker
01.01 31 Poultry Hatchery Employee
01.01 41 Swine Farm Employee
01.01 51 Horse Farm Employee
01.01 61 Livestock Auction Employee
01.01 71 Feedlot Employee
01.01 81 Poultry Farm Worker - Broiler Production
01.01 91 Poultry Farm Worker - Commercial Egg Flock
01.01 12 Crop Farm Employee
01.01 22 Plant Scientist Assistant
01.02 00 Agricultural Supplies/Services
01.02 11 Agricultural Chemical Sales and Serviceman
01.02 12 Feed Sales and Serviceman
01.02 22 Feed Warehouse Employee
01.02 32 Grain Elevator Employee
01.02 13 Seed Sales Serviceman
01.02 14 Fertilizer Sales and Serviceman
01.02 99 Agri Supplies/Services (Other)
01.12 99 Horseshoer
01.22 99 Veterinarian Assistant
01.03 00 Agricultural Mechanics
01.03 11 Agricultural Machinery Repairman
01.03 21 Agricultural Machinery Set-up and Deliveryman
01.03 31 Irrigation Equipment Sales and Serviceman
01.03 41 Farm Equipment Operator
01.03 51 Agricultural Machinery Mechanic's Helper
01.03 61 Agricultural Machinery Partsman
01.03 71 Agricultural Machinery Service Supervisor
01.03 12 Agricultural Structures and Conveniences Employee
01.03 13 Soil Management Employee
01.03 14 Water Management Employee
01.03 15 Agricultural Welding and Serviceman
01.03 25 Agricultural Hand and Power Tools Serviceman
01.03 16 Agricultural Construction and Maintenance Employee
01.03 17 Farm and Ranch Electrification Employee
01.04 00 Agricultural Products

01.04 11 Meat Processing Plant Employee
01.04 21 Fruit and Vegetable Packing Plant Employee
01.04 31 Poultry Products Employee
01.04 41 Dairy Products Employee
01.04 51 Wool and Mohair Warehouse Employee
01.04 61 Cotton Gin Employee
01.04 71 Seafood Processing Employee
01.05 00 Ornamental Horticulture
01.05 10 Garden Center Employee
01.05 13 Greenhouse Worker
01.05 14 Parks Employee
01.05 24 Park and Landscape Employee
01.05 34 Assistant Groundskeeper
01.05 15 Nursery Worker
01.05 16 Assistant Greenskeeper
01.06 00 Agricultural Resources
01.06 12 Recreation Farm Employee
01.06 13 Soil Conservationist Assistant
01.06 14 Wildlife Conservation Employee
01.06 24 Game and Hunting Farm Employee
01.06 17 Fish Hatcheryman Employee
01.07 00 Forestry (Production, Processing, Management, Marketing & Services)
01.07 10 Forestry Worker
01.07 14 Wood Products Employee
01.07 24 Sawmill Employee
01.99 00 Other

III. Agricultural Pre-Employment Laboratory

01.01 00 Agricultural Production
01.11 01 Feedlot Employment I-II
01.02 00 Agricultural Supplies/Services
01.02 01 Agricultural Chemicals & Fertilizers I-II
01.03 00 Agricultural Mechanics
01.03 01 Agricultural Power & Machinery Repair I-II
01.03 10 General Agricultural Mechanics I-II
01.03 81 Farm & Ranch Mechanical Repair (CVAE)
01.04 00 Agricultural Products
01.04 01 Meat Processing I-II
01.05 00 Ornamental Horticulture I-II
01.05 20 Horticultural Related Occupations (CVAE)
01.06 00 Agricultural Resources Development I-II
01.07 00 Forest Products Harvesting I-II

APPENDIX V

Census Coding Scheme for Occupation Combinations

Census Coding Scheme for Occupation Combinations

PROFESSIONAL, TECHNICAL & KINDRED WORKERS 001 - 195

Accountants 001; computer specialists 003,004,005; statisticians 036
Architects 002; draftsmen 152; designers 183
Engineers: civil 011, electircal 012, industrial 013, mechanical 014, sales 022, other 023
Economists 091; home management advisors 026
Librarians 032,033
Scientists: atmospheric 043, biological 044, chemical 045, physical 042, 051, 052, 054
Personnel and labor relations workers 056
Technicians: health 085, chemical 151, electrical 153, engineering 154, 155, 162, 173, 195
Teachers: college & university, science, engineering, health, trade economics 102-143,145
Surveyors 161
Airplane pilots 163
Vocational & educational counselors 174
Athletes & kindred workers 180
Writers, editors, reporters, photographers, publicity 181-194

MANAGERS AND ADMINISTRATORS, EXCEPT FARM 201 - 246

Public administration: assessors 201, controllers, inspectors 213, 215,222
Bank officers, financial managers 202; creditmen 210
Buyers, shipping agents 203,205; purchasers 225
Officers, pilots, pursers: ship 220,221
Officials of lodges, societies, unions 223
Sales managers: retail & wholesale trade 231,233
School administrators: college 235
Managers and administrators, other 245 & 246

SALES WORKERS 260 - 284

Sales & advertising agents 260,281,282,283,284
Auctioneers 261
Demonstrators 262
Insurance & real estate agents & brokers 265, 270
Stock & bond salesmen 271

CLERICAL & KINDRED WORKERS 305 - 396

Bookkeepers 305
Enumerators & interviewers 320
Estimators & investigators 321
Expeditors & production control managers 323
Insurance adjuster & real estate appraisers 326, 363
Secretaries 370, 364, 372
Shipping & stock clerks & storekeepers 374, 381
Weighers 392
Clerical workers, other 394, 395, 396

CRAFTSMEN & KINDRED WORKERS 403 - 586

Blacksmiths 403
Excavating, grading, road machinery operators 436, 412
Carpenters 415, 416
Decorators & window dressers 425
Electrician apprentices 431
Foremen 441
Inspectors, scalers, graders 450, 452
Mechanics & repairmen 470-495
Pattern & model makers 514
Structural metal craftsmen 550
Craftsmen & kindred workers, other 575, 586

OPERATIVES 602 - 715

Assemblers 602
Bottling & canning operatives 604
Chainmen, rodmen, axmen: surveying 605
Checkers, examiners, inspectors, manufacturing 610
Sawyers & cutting operatives 662, 612
Graders, sorters, packers, wrappers 624, 625, 634, 643
Welders & flame cutters 680
Machine operatives 690, 692, 696, 694, 695
Deliverymen, motermen, truck drivers 705, 710, 715

LABORERS, EXCEPT FARM 753 - 796

Freight & stock handlers 753, 762
Lumbermen, raftsmen, woodchoppers 761
Teamsters 763
Vehicle washers & equipment cleaners 764
Warehousemen 770
Laborers, other 780, 785, 796

SERVICE WORKERS, EXCEPT PRIVATE HOUSEHOLD 933 - 962

Attendants, personal service 933
Guards & watchmen 962

ACCESSION NUMBER: VT103280

PUBLICATION DATE: 31OCT73

TITLE: EDUCATIONAL AND OCCUPATIONAL ASPIRATIONS AND EXPECTATIONS OF EL PASO HIGH SCHOOL STUDENTS.

PERSONAL AUTHOR: VENEGAS, MOISES

DESCRIPTOR: *COMPARATIVE ANALYSIS; *ANGLO AMERICANS; *MEXICAN AMERICANS; *OCCUPATIONAL ASPIRATION; DOCTORAL THESES; STATISTICAL ANALYSIS; *ACADEMIC ASPIRATION; GRADE 10; GRADE 12; SENIOR HIGH SCHOOLS

IDENTIFIER: EL PASO; TEXAS

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 115P.; ED.D. DISSERTATION, NEW MEXICO STATE UNIVERSITY

ABSTRACT: A COMPREHENSIVE SURVEY OF THE EDUCATIONAL AND OCCUPATIONAL ASPIRATIONS AND EXPECTATIONS OF EL PASO HIGH SCHOOL STUDENTS WAS MADE IN THIS STUDY. THE DATA WERE OBTAINED FROM A RANDOM SAMPLE OF FIVE PERCENT OF THE HIGH SCHOOL SOPHOMORES AND SENIORS ENROLLED IN THE EL PASO AND YSLETA SCHOOL DISTRICTS. APPROXIMATELY 590 STUDENTS WERE SAMPLED DURING FEBRUARY AND MARCH OF 1973. DATA ON THE HIGH SCHOOL STUDENTS WERE COMPARED AND ANALYZED IN TERMS OF ETHNICITY (MEXICAN AND ANGLO AMERICAN), SEX, GRADE LEVEL, AND TYPE OF PROGRAM. SPECIFICALLY, HYPOTHESES WERE FORMULATED TO DETERMINE DIFFERENCES OF EDUCATIONAL AND OCCUPATIONAL ASPIRATIONS AND EXPECTATIONS BASED ON SEX, GRADE, ETHNICITY, AND SCHOOL PROGRAM. RESPONSES WERE ANALYZED USING THE CHI-SQUARE AND ANALYSIS OF VARIANCE. CONCLUSIONS INDICATE THAT STUDENTS IN ALL GROUPS, REGARDLESS OF ETHNICITY, SEX, GRADE, OR PROGRAM HAD HIGH ASPIRATIONS AND EXPECTATIONS FOR EDUCATION AND OCCUPATION. A STATISTICALLY SIGNIFICANT DIFFERENCE WAS FOUND BETWEEN ANGLO AMERICANS AND MEXICAN AMERICANS AND BETWEEN MALES AND FEMALES. GENERALLY, ANGLO AMERICANS HAD HIGHER ASPIRATION AND EXPECTATION LEVELS, AS DID MALES IN COMPARISON TO FEMALES. A SIGNIFICANT DIFFERENCE WAS ALSO NOTED AMONG THE THREE SCHOOL PROGRAMS; THE ACADEMIC GROUP WAS GENERALLY HIGHER THAN THE GENERAL AND VOCATIONAL SAMPLES. IN ADDITION TO A REVIEW OF THE LITERATURE, DESCRIPTION OF THE PROCEDURES, AND DATA ANALYSIS, THE SURVEY INSTRUMENT IS APPENDED. (AUTHOR/NJ)

PREFACE

This study is one part of a two-part comprehensive manpower survey done in El Paso County, funded partly by Division of Occupational Research and Development, Department of Occupational and Technical Education, Texas Education Agency.

The work was done by Research Assistant Moises Venegas, who was then a doctoral student at New Mexico State University. In effect, this report is Mr. Venegas' dissertation.

The other part of the study, which analyzed the the need for trained/educated personnel as seen by the employers of the County, completes the comprehensive manpower survey, which will be used as a basis for designing curricular programs to meet not only the needs of the students but also the needs of the employers.

We want to thank the high school students who participated in the study, the members of the administrative staffs of both the Ysleta and the El Paso Independent School Districts, and the faculty members who helped us in our efforts.

We also want to thank the staff of the Texas Education Agency for their help and encouragement and the New Mexico State University personnel who were so generous with their time and effort, particularly Mr. Venegas.

Respectfully submitted,

Alfredo G. de los Santos Jr.
President
31 October 1973

ACKNOWLEDGEMENTS

The writer would like to express his sincere appreciation to his advisor, Dr. Everett D. Edington, for his assistance and advice given during the preparation of this dissertation. He He would also like to thank his committee, Dr. Timothy J. Pettibone, Dr. Don B. Croft, Dr. Gregory Maltby, Dr. Darrell Kirby, and Dr. Simon F. Kropp, for their comments, suggestions, and time given during the preparation of this study.

In addition, the writer would like to thank Dr. William P. Kuvleskey and the research team at Texas A&M University for their assistance in compiling and coding the information for this study. A special note of thanks is extended to Dr. Alfredo de los Santos for his assistance in the study's development. He also wants to thank Mrs. Marian E. Baker for her suggestions and for typing the manuscript.

I especially wish to acknowledge my wife, Nelinda, and Michael for their patience and understanding during the last two years.

ABSTRACT

EDUCATIONAL AND OCCUPATIONAL ASPIRATIONS
AND EXPECTATIONS OF EL PASO HIGH
SCHOOL STUDENTS

BY

MOISES VENEGAS, B.A., M.A.
Doctor of Education in Educational Administration
New Mexico State University
Las Cruces, New Mexico, 1973
Dr. Everett D. Edington, Chairman

The primary purpose of this study was to make a comprehensive survey of the educational and occupational aspirations and expectations of El Paso high school students.

The data were obtained from high school sophomores and seniors enrolled in the El Paso and Ysleta school districts, El Paso, Texas. An approximate random sample of 5% of sophomores and seniors was taken from the high schools of the two districts. Data were gathered through the use of group-administered questionnaires. The instrument selected was one which was developed at Texas A&M University and which has been widely used in status

projection studies of youth. Approximately 590 students were sampled during February and March of 1973.

Data on the high school students were compared and analyzed in terms of ethnicity (Mexican American and Anglo American), sex, grade level, and type of school program in which enrolled. Specifically, hypotheses were formulated to determine differences of educational and occupational aspirations and expectations based on sex, grade, ethnicity, and school program. Responses were analyzed using chi-square and analysis of variance.

From the findings presented, it was concluded that students in all groups, regardless of ethnicity, sex, grade, or school program, had high aspirations and expectations for education and occupation. A statistically significant difference was found between Anglo Americans and Mexican Americans and between males and females. Generally, Anglo Americans had higher aspiration and expectation levels, as did males when compared to females. A significant difference was also noted among the three school programs, i.e., the academic group was generally higher than the general and vocational samples.

Chapter 1

INTRODUCTION

Excellence in education requires a rational basis for change. The first step is an assessment of needs. To attempt to state that assessing educational need is a concept new to education would be naive. On the other hand, there is little question that this most critical component of planning and decision-making has been left to the somewhat capricious whims of intuition and educational guessmanship. Many people in education assume, rather than assess, educational needs. It is the intent of this paper to survey the educational needs of El Paso high school students.

The comprehensive community college is better than most institutions of higher learning in attempting to fulfill the educational and occupational needs of the student of today. With the democratic "open door" policy of admission, the community college must offer opportunities to all the community, not just to a selected few.

In a discussion of the steps necessary to provide for a successful community college, Thornton (1966) outlined the following steps:

> 1. The first step is obviously an assessment of whether the community wants and needs a community college.

> 2. Having conducted such a poll, the future community college needs to conduct a general survey of educational needs before opening its doors.
> 3. Once the community college has its formal opening with a limited offering of courses, a more detailed investigation is necessary in order for the school personnel to have data available for future decision-making [p. 110].

In general, this survey should include at least two dimensions: the student dimension and the business sector. From the high school students, information is needed as to how many plan to attend college, what kind of courses they need, and what kind of vocational aspirations they have. From the business and industrial community, there is a need to acquire data on employment trends, training requirements, labor supply, and the economic future of each specific type of business. This study is, of course, interested in ascertaining the high school student's educational and occupational plans for the future. The best way to obtain this information is to approach the student himself and ask him. With this information on hand, the community college should be in a position to meet the needs of its clientele.

Statement of the Problem

The failure of schools to provide programs that will help all students cannot continue. Society and especially educational institutions need to meet the internalized needs and expectations of those individuals who make up that society. Not only will the failure to meet those needs lead to a frustrated society, but it will spell defeat for the purpose which educational institutions were set up to fulfill.

Educational institutions need to know what it is that people want. For the comprehensive community college, there are two main areas of concern, the business community and the student population, as mentioned earlier. The business sector has to be surveyed in order to determine the type of people it needs and wants, and the students need to be consulted in order to ascertain what they want and hope to be. The present study was mainly concerned with the students' aspirations and expectations in education and occupation. The study utilized the scheme suggested by Kuvleskey and Bealer (1966) to measure the aspirations and expectations of high school students. Kuvleskey and Bealer made a distinction between aspiration and expectation. Expectation refers to the person's anticipation, which may not be the same as aspiration or desire. The divergence between the two, if it exists, has been labeled anticipatory goal deflection by Kuvleskey and Bealer. The more precise we are concerning the aspirations and expectations of people, the better we can plan a program to meet the needs of those people.

Purpose of the Study

The primary purpose of this study was to make a comprehensive survey of the educational and occupational aspirations and expectations of El Paso high school students. It will be used along with other data for the projection, planning, and revision of the El Paso Community College's curricular program. The study will help

to make the community college more responsive to the needs of students in the El Paso area.

Definitions of Terms

Anticipatory goal deflection: The condition of not having congruent aspirations and expectations. It may be positive, in which case expectations are higher than aspirations, or negative, which indicates expectations lower than aspirations.

Aspirations: Those statuses that are desired; for example, an occupation or an education that is desired by an individual (see Appendix A, Questionnaire, question 9).

Community college: A public college which provides a two-year, postsecondary college parallel, terminal-general or terminal-technical, for out-of-school youth; or adult education programs; or any combination of these.

Expectations: The probable attainment of particular status areas, e.g., the educational level an individual expects, not desires, to attain. The individual's attitude toward this goal may be favorable or unfavorable (see Appendix A, Questionnaire, question 11).

Mexican American(s): A person or persons of Mexican or Spanish ancestry. Such diverse terms as Spanish-speaking Americans, Spanish Americans, Mexicans, La Roza, Latinos, Hispanos, Chicanos, etc., are often used interchangeably to identify this ethnic group in the Southwest.

Research Objective

Research was conducted to determine the occupational and educational status orientations of a sample of high school students from the metropolitan area of El Paso, Texas. Responses to the survey were compared by sex, age, ethnic background, and high school program in which enrolled. The major objective of the study was to determine the educational and occupational preferences of high school students in the El Paso area.

Implications of the Study

The results of this study will serve many purposes in future planning of educational programs in the El Paso area. The study will serve along with other data as a basis for the projection, planning, and revision of the El Paso Community College's curricular programs. Also, El Paso high schools will have much needed information for use in guiding the student towards his aspirations and expectations. The student becomes part of the planning in educational programs.

In a much wider range, the data gathered by the research will be compared and used with a similar study that is being conducted in the industrial and business sector. What business and industry need in future manpower and what the student hopes to be will give a very specific direction to educational institutions in determining what type of student to prepare for the future.

This study is also part of a more comprehensive survey of high school students in Texas that is being conducted by the Department of Sociology at Texas A&M University

Chapter 2

REVIEW OF THE LITERATURE

Aspirations and Expectations

The empirical literature on educational aspirations is substantial. Kuvleskey and Reynolds (1970a, 1970b, 1970c) have listed more than 400 published and unpublished works pertaining to educational and occupational aspirations. Merton's (1957) theory of social structure and anomie inculcation of high success goals of various kinds (educational and occupational) constitutes a patterned characteristic that cuts across subcultural differentiation in our society. Merton maintained that having high aspirations is not unique to one group in society, but is held by all segments of our society. Such writers as Heller (1968), Madsen (1964), and Schwartz (1971) have concluded that aspirational levels of Mexican Americans are lower than those of Anglo Americans. These authors used the cultural determinism model to explain the differences between the two groups. Others in the field of status orientation have come to a different conclusion. The findings of Kuvleskey (1970), for example, indicate that it is known from much research that the occupational aspirations and expectations of all kinds of youth are high during the high school stage relative to opportunities available.

Educational and occupational choices are decisions that are formulated over a period of years. Taylor (1968) identified three different stages: fantasy, tentative, and realistic. It is thought that the high school student is somewhere between the tentative and realistic stages. Studies do not completely agree on the stability of projection for high school students. Some studies indicate that students are stable, while other studies support the theory that there is considerable change between the tenth and twelfth grades. A Louisiana study (Mondart et al., 1970), conducted to identify the occupational and educational aspirations and expectations of high school students, surveyed a total of 13,607 students. The findings indicated that high school students develop strong occupational interests early, with tentative choices made by the eleventh grade. A Texas study project found that a large number of youth's projections went up (Kuvleskey, 1969). If this is true, then it contradicts Ginzberg's phase theory which contends that with age and maturity, aspirations and expectations become more realistic (Hoppock, 1967). For the researcher hoping to gather data to help plan educational and occupational training programs, this becomes crucial. When, in fact, is the time when adolescents have the most realistic view of what they expect or desire to be? By looking at two high school levels (tenth and twelfth), it is hoped that in this study some answers can be found.

In searching for answers that will help in planning future programs, there are many variables that aid in predicting what a

person will eventually become. A person's aspirations and expectations, more than other known variables, help predict what a person will do. Haller (1968, p. 484) cited correlations from +.46 to +.49 between youth's educational and/or occupational aspirations and early adult levels of attainment.

Empirical evidence shows that most respondents in the study of educational and occupational choices can differentiate rather sharply between aspirations and expectations. Ability to differentiate between aspirations and expectations is found at various age levels, but is particularly documented among adolescents (Stephenson, 1957).

In the words of Haller (1963), "we do not have a valid theory to explain and predict exactly what occupation a person will enter [p. 5]." There are, however, some instruments that help us decide what it is that people wish to pursue in terms of education and occupation.

Some distinctions should be made with regard to youth's orientations toward future status attainment. There are two types of projections (Kuvleskwy, 1970). The one involving desires is aspiration and the other, which is an anticipation of attainment, is expectation. Expectation, then, is

> the individual's estimation of his probable attainment in reference to a particular goal-area, i.e., what occupational position he expects to reach. Expectations should not be confused with aspirations, for the object involved with an expectation need not be desired and therefore need not be a goal. The object

> involved with an expectation is an anticipated occurrence, and the individual's orientation toward the expected state may be favorable or unfavorable [Kuvleskey & Bealer, 1966, pp. 11-12].

An example might be that a person desires to become a lawyer, but because of the time and money involved expects only to become an elementary school teacher. Kuvleskey and Bealer (1966) maintained that current evidence supports the fact that expectations are more clearly related to existing occupational opportunities than are aspirations. Kuvleskey (1970) contended that aspirations come before expectations, the latter being formed due to "perceived limitations, blockages, or strong directive pressures [p. 10]." When the two diverge, the relationship between them is an analytically separable element representing degree of modification of aspirations as anticipatory goal deflection (Kuvleskey, 1970). Anticipatory goal deflection represents the potential divergence.

Each of these two projections, aspirations and expectations, consists of two dimensions: (a) the status element which is the object of orientation, and (b) the strength of orientation which is measured by intensity of desire and certainty of expectation (Kuvleskey, 1970).

There is little research to indicate status projections of Mexican-American youth. D'Antonio and Samora (1962), De Hoyos (1961), Heller (1963), and Manuel (1965) have done some general research, but such research has not been too precise in terms of status projections as suggested by Kuvleskey and Bealer (1966).

There have been few comparative studies done in status projections of the Mexican American. The Juarez (1968) study, which is one of the few in the comparative area, found that, in comparison with the aspirations and expectations of Anglo youth, those of Mexican Americans differed very little. In a study based on rural youth in Texas, Mexican Americans, when compared with Negro and Anglo youths, tended to have lower occupational and educational projections (Kuvleskey et al., 1969).

A few studies have shown that the type of high school program offered, vocational in this case, appears to have a moderately negative association with the level of occupational aspiration and expectation and plans for college (Kuvleskey, 1969).

A lack of research is evident concerning the status projection of Mexican-American metropolitan youth. The research proposed for this study will contribute to the validation of existing research on the Mexican American, as well as provide more knowledge in the field of status projection.

The Community College

The community college has evolved from the junior college concept to the comprehensive community college idea (Fields, 1962). The changes have been made in part to meet the demands of the students.

At first the junior college was interested mainly in providing the first 2 years of college education. Such educators as William R. Harper of the University of Chicago felt that if the

4-year college or university could concentrate on the upper-level students, the product would be improved. Under his leadership, the University of Chicago separated the first 2 years from the junior and senior levels (Thornton, 1966) and established Joliet Junior College in 1901. Joliet Junior College is considered to be the first public junior college created which is still in existence today. Harper, in trying to meet the needs of the student population, cited the advantages of the new 2-year college. He stressed the "opportunity of doing more thorough work, saving money, stopping honorably at an obvious terminal point, and being able to take the first two years of college living at home [Thornton, 1966, pp. 47-48]." To summarize the philosophy of the junior college at the turn of the century, it was strictly for the purpose of providing transfer education.

The 1920's began to see an expansion of the junior college philosophy. The junior colleges saw the need to provide more for the student than merely transfer education. Between 1920 and 1945, therefore, the occupational programs of the 2-year schools were expanded (Hillway, 1958). As before, the main reason for change was a realization of the needs of the students. There was a demand for occupational training, and the junior college was ready to provide it. The Depression accelerated the trend towards more occupational education.

By 1945 the community college concept was beginning to take shape. The community college not only provided transfer and

occupational education, but it also developed adult education and community service programs.

It is, then, the intent of the community college to meet the demands of all students with a curriculum that satisfies those needs. To say that a community college offers transfer education, general education, and occupational and technical programs is not enough. We must know exactly what to offer in these areas in order to satisfy the needs of the college's clientele.

El Paso has two distinct student groups: Anglo and Mexican American. In a 1971 report, the Spanish-American surname group comprised 56.3% of the total number of students, while the Anglo group accounted for 40% (Wynn, 1971). The community college has to carefully plan programs that will satisfy needs of all students it serves. There is considerable agreement among educators that educational institutions have not done a good job of planning for minority students, and especially for the Mexican American (Carter, 1970). The failure of the schools to provide a successful program for the Mexican American has been variously argued from the cultural determinism of Heller (1968) and Madsen (1964) to the "pathological" reasoning advanced by Arciniega (1971).

Needs Assessment

It is common practice for many states to conduct their own assessment surveys to identify educational needs in terms of subjects to be taught, level of education needed, and type of vocational and occupational programs (Nevada State Department of

Education, 1970; U.S. Department of Health, Education and Welfare, 1960). Some states offer specific guidelines which must be followed in order for a community college to begin its operations or to continue as an educational institution. The Pennsylvania Department of Public Instruction (1965) offered a typical format:

1. Survey of community interest in a community college.

2. Survey of business and industry educational requirements.

3. Survey of youth and parental aspirations for higher education.

4. Survey of program needs.

The general purpose of most of these educational development models is threefold: (a) investigation of student, community, and manpower needs; (b) planning of curriculum programs with the information gathered; and (c) implementation of the plan.

According to Klein et al. (1971), in a symposium at the University of California at Los Angeles, there are two basic reasons why we need to determine educational needs. First, we need to ascertain which needs have the highest priority so that we can focus on those in planning programs. Secondly, needs assessment justifies the attention to or development of certain curricula over others.

The scope and purpose of needs assessment are determined by the purpose for which the data will be used. For example, in a community college district a needs assessment might be conducted to determine what type of programs to focus on.

The American Association of Junior Colleges (AAJC) has come up with more specific guidelines for the community or junior college (Henderson, 1970). The AAJC sees the needs assessment survey as a vital step for 2-year colleges. The survey can establish certain student characteristics such as socioeconomic background, education, and personal aspirations. The survey can also be used, as others have stated, to help define employment needs and projections. In the area of finance, the survey can be utilized to establish what is needed for a diverse student population. Generally, it can be said that the survey is necessary to determine what programs to offer and what the curriculum should be. Needs assessment surveys give the college and its administration and faculty hard data by which decisions can be made. Without such a tool, the administration is left to make assumptions of what is needed. To run a community college, one needs more than assumptions.

The AAJC guidelines also deal with the dimensions and design of the survey. Basic to the design is the gathering of information which gets at the needs, interests, and aspirations of those to be surveyed--the employer and potential employee--which should be considered. In the collection of data, different approaches might be used, such as by mail, telephone, or by dealing with people with specific knowledge of the target group. For example, if one wanted student interests, one could ask school personnel. The most basic and probably the best method for obtaining results is to administer a questionnaire or interview the target group directly. In the

selection of the target group, one should choose a random sample which is large and unbiased.

In determing enrollment potentials, the AAJC recommends different sources from which one could gather reliable information. Among the groups are parents, high school staff and faculty, and potential students. In surveying potential students, it is necessary to determine needs for postsecondary education and types of program training. There are different potential student populations, but the most promising and easiest to contact are those who are in high school.

The questionnaire, if one is used, may have different types of questions according to the purpose of the study. Generally they should include some questions on financial considerations, choice of college, program interest (transfer, technical, vocational), student perception of occupational education and preference for attending a local or distant college.

A typical example of a needs assessment survey by a community college is one which was conducted by Catawba Valley Technical Institute (CVTI) (Summerell, 1969). The CVTI, which is part of the community college system in North Carolina, provided technical and vocational education, but felt that other types of educational programs could be offered to the public. The school set out to survey the community so that it could implement a program that satisfied those needs. The school district was primarily interested in determining whether it could add different types of programs to

make the school a more comprehensive community college. The school was already offering courses in the technical/vocational fields and wanted to know if there was a need and demand for transfer or parallel education. The CVTI surveyed students, parents, and the business community in the area which it served. The findings indicated that the CVTI should offer a more comprehensive program.

Conclusion

It is hoped that this study will add new information in needs assessment studies. By concentration on the occupational and educational aspirations or preferences of the high school students, much needed information will be gathered based on student perceptions. The study is student-centered rather than subject-centered.

Chapter 3

PROCEDURES

Population

The population for this study included the public high school students of the El Paso and Ysleta, Texas, school districts. The high school sample was taken from sophomores and seniors of these districts.

The two separate school districts, El Paso and Ysleta, are located in El Paso, Texas. Situated in the far western corner of Texas at the center of New Mexico's southern border, El Paso is on the international boundary line between the United States and Mexico. El Paso and Cuidad Juarez together form an international metropolitan area of nearly 1,000,000 people (D'Antonio & Form, 1965). El Paso County, which includes both of the school districts involved in this study, has an approximate population of 360,000. The schools in the El Paso area have an ethnic composition of approximately 56% Mexican American, 42% Anglo, and 2% Black. With Fort Bliss and other federal installations in the area, there is a mobile student population, especially in the northeast corner of El Paso.

Sample

Data for this study were obtained from an approximate 5% sample of high school sophomores and seniors in the El Paso and Ysleta school districts. Two methods of selecting the sample were used: (a) A simple random list of numbers, given to the school, was used

to select students from the school's sophomore and senior lists; and (b) classes were selected according to the criterion that classes chosen were required courses for either all seniors or all sophomores. In almost all classes that were chosen, the students had been randomly selected by computer. Table 1 shows the distribution of students in the study.

TABLE 1

Methodology

Data were collected through the use of a collectively administered questionnaire (Appendix A). The students completed each stimulus question as it was read aloud by the interviewer. The El Paso Texas Youth Study questionnaire was developed at Texas A&M

University and has been widely used in studies of status projections. It contains 38 questions besides a separate, unnumbered section requesting the respondent's name and address and the name and address of a relative or friend most likely to keep in touch with the respondent for a few years. This information is requested so that the respondent may be contacted again in the future.

The questionnaire was administered to the students at their respective schools starting on February 26 and ending on March 15, 1973. Length of time required to administer the instrument was about 25 to 45 minutes. It was administered to groups of 20 to 60 students with general directions coming from the survey leader and specific ones being provided by two to three proctors.

Indicators and Measurements

The questionnaire provides fixed-choice stimulus questions to elicit responses which indicate educational and occupational aspirations and expectations. Aspirations have been defined as desires of the individual; expectations have been defined as the levels the respondent really expects to attain. When a difference exists, this is referred to as anticipatory goal deflection. These measurements, besides intensity and certainty of orientation, are discussed in the following sections.

Educational aspirations and expectations. Concerning educational aspirations, question number 13 asks the student how much education he would desire if he were free to choose. Concerning educational expectations, question number 14 asks the student what

he <u>really</u> expects to do about his education. The latter question assumes that the respondent will take into consideration his ability, financial condition, and social situation.

> <u>Question number 13</u>: If you could have as much education as you desired and were completely free to choose, which of the following would you do? (Circle only one number.)
>
> 1. Quit high school and never go to school again.
> 2. Quit high school and take some vocational training for a job.
> 3. Graduate from high school and never go to school again.
> 4. Graduate from high school and then complete a business, commercial, nurses' training, or some other technical school program.
> 5. Graduate from a junior college.
> 6. Graduate from a college or university.
> 7. Complete additional studies after graduating from a college or university.
>
> <u>Question number 14</u>: What do you <u>really</u> expect to do about your education? (Circle only one number.)
>
> Note: Responses for this question are exactly the same as for question number 13.

The responses are coded in accordance with the seven-level educational hierarchy.

<u>Occupational aspirations and expectations</u>. Concerning occupational aspirations and expectations, the same concept is used as for educational aspirations and expectations. The stimulus questions are open-ended. Question number 9 refers to occupational aspirations and question number 11 to occupational expectations.

> <u>Question number 9</u>: If you were completely free to choose any job, what would you <u>most desire</u> as a lifetime k'nd of work? (In answering this question, give an <u>exact</u> job. For example, do not say "work on the railroad," but tell us what railroad job you would like to have.) Write your answer in the box below.

Question number 11: What kind of job do you really expect to have most of your life? (Write your answer in the box below. Please give an exact job)

The answers to both questions were then coded according to an occupational level classification scale which was derived from the Duncan Scale to facilitate a uniform grouping of occupations listed by the respondents' inventories (question numbers 9 and 11). The categories used were:

0 - No information

1 - High professional

2 - Low professional

3 - Glamor

4 - Managerial, official

5 - Clerical and sales

6 - Skilled worker

7 - Operative

8 - Laborer

9 - Housewife, other

Anticipatory goal deflection. Anticipatory goal deflection is determined by comparing the measures of aspiration and expectation. If this measure differs, deflection exists. There are two types of deflection: positive and negative. Negative deflection is judged to exist if the expectation level is lower than the aspiration level. Conversely, positive deflection is indicated when the expectation level is higher than the aspiration level. Students'

responses are coded on three levels for anticipatory goal deflections: none, positive, and negative.

Concerning anticipatory goal deflection for education, a student would show no deflection if his educational aspirations were equal to his educational expectations, that is, he would aspire to graduate from a college or university (number 6 on the educational scale), for example, and would expect to graduate from a college or university. The deflection for this student would be none. A student with negative deflection might aspire to graduate from a college or university (number 6) and only expect to graduate from high school (number 3). Positive deflection would reverse the order of aspiration and expectation in the above example.

For anticipatory goal deflection in occupation, the same scale is used in the same way as for educational goal deflection. For example, a student would show negative deflection by desiring to be a lawyer (High professional, number 1 on the collapsed scale) and expecting to be a clerk in a department store (number 5 on the occupational scale).

Intensity of aspiration. Intensity of aspiration is indicated by a question that asks the respondent to rank order seven status goals believed to be desired by most young people, with both educational and occupational goals listed. Responses produce a self-rank hierarchy of importance ranging from scores of one through seven (question number 10). The lower the score is, the stronger the intensity of aspiration.

Question number 10: Listed below are a number of things that most young people look forward to. Rank them in order of their importance to you. For the one you think is most important, check number 1 in front of it; for the next most important one, check number 2, and so on until you have a number checked for each one. Read over the entire list before answering the question. (Check only one number beside each sentence and check each different number only once.)

Order of Importance to You							
1	2	3	4	5	6	7	
___	___	___	___	___	___	___	Having lots of free time to do what I want.
___	___	___	___	___	___	___	To develop my mind and get all the education I want.
___	___	___	___	___	___	___	To earn as much money as I can.
___	___	___	___	___	___	___	Getting the job I want most.
___	___	___	___	___	___	___	Living in the kind of place I like best.
___	___	___	___	___	___	___	Having the kind of house, car, furniture, and other things like this I want.
___	___	___	___	___	___	___	To get married and raise a family.

Certainty of expectation. Questions (numbers 15 and 12) concerning certainty of expectation for education and occupation are very much alike. The respondent is asked to indicate how certain he is that he will attain the expected level. A five-level scale is used in both questions.

Question number 15: How sure are you that you will really achieve the education you expect?
I am: (Circle one number.)

1	2	3	4	5
Very sure	Sure	Not very sure	Uncertain	Very uncertain

Question number 12: How sure do you feel that this will be the kind of work you will do most of your life? (Circle one number.)

I feel:

1	2	3	4	5
Very sure	Sure	Not very sure	Uncertain	Very uncertain

Null Hypotheses

The information obtained from the sample was related to independent and dependent variables. Response groups were classified according to the following classification variables:

1. Ethnicity
   a. Mexican American
   b. Anglo American
2. Grade level
   a. Sophomore
   b. Senior
3. Sex
   a. Male
   b. Female
4. High school program
   a. Academic or college preparatory
   b. General
   c. Vocational

Responses consist of measures on variables described as being dependent. They are listed as:

1. Educational aspiration level
2. Occupational aspiration level

3. Educational expectation level
4. Occupational expectation level
5. Anticipatory goal deflection -- education
6. Anticipatory goal deflection -- occupation
7. Intensity of aspiration -- education
8. Intensity of aspiration -- occupation
9. Certainty of expectation -- education
10. Certainty of expectation -- occupation

Interest of the analysis centers on determining the significance of the differences among the various groups in relation to the dependent variables. Specifically, the following null hypotheses were tested:

Ho_1: There will be no significant differences between the Mexican-American group and the Anglo-American group on the 10 dependent variables.

Ho_2: There will be no significant differences between males and females on the 10 dependent variables.

Ho_3: There will be no significant differences between sophomores and seniors on the 10 dependent variables.

Ho_4: There will be no significant differences among the students enrolled in different programs (general, academic, and vocational) on the 10 dependent variables.

Ho_5: There will be no significant interactions between sex and ethnicity and between grade level and school program.

Analysis of the Data

The detection of differences in responses is most interesting for the categories of (a) ethnicity, (b) sex, and (c) high school program. Furthermore, it is of interest to know if responses of one category to the 10 variables vary with classification in a second category. That is, the question becomes one of also detecting significant interactions.

Two-way analysis of variance was first used with ethnicity and sex and then with grade and high school program to detect significant differences and interactions among the classifications of the different variables. Analysis of variance was used for all the variables except for occupational aspirations, occupational expectations, and anticipatory-goal deflection. Chi-square was used for these last three variables because of the categorical nature of the data. Appropriate after-F tests were used to determine where differences were if the analysis of variance showed they existed.

Data Processing

Information on the questionnaire from the study was coded and placed on FORTRAN programming forms. A 10% sample of the questionnaires was checked against the FORTRAN forms and an error of less than 1% was found. The data were transferred to Hollerith cards which were keypunched and verified and had an error of less than 1%. Facilities of the Texas A&M University Data Processing Center were used to develop frequency and percentage tables.

Chapter 4

ANALYSIS OF DATA

The purpose of this chapter is to describe the educational and occupational status orientations of Mexican-American boys and girls studied, with further analysis of grade level and type of program in which the students were enrolled.

The findings are presented separately by ethnicity, sex, grade level, and curricular program in which enrolled. Specifically, measures were taken of the 10 dependent variables (listed on pp. 24-25) for each of the five major null hypotheses. The hypotheses are:

Ho_1: There will be no significant differences between the Mexican-American group and the Anglo-American group on the 10 dependent variables.

Ho_2: There will be no significant differences between males and females on the 10 dependent variables.

Ho_3: There will be no significant differences between sophomores and seniors on the 10 dependent variables.

Ho_4: There will be no significant differences among the students enrolled in different programs (general, academic, and vocational) on the 10 dependent variables.

Ho_5: There will be no significant interactions between sex and ethnicity and between grade level and school program.

Ethnicity

In this section, ethnicity and interactions between sex and ethnicity are discussed. Sex as a separate variable is discussed in the next section.

Educational Aspirations

Desired levels. A statistically significant difference was found between the Mexican-American group and the Anglo-American group (Table 2). The means for the two ethnic groups were 5.09 and 5.50 for the Mexican Americans and the Anglo Americans, respectively. These mean scores were based on the educational scale presented in Chapter 3 (p. 20) which designated a score of 1 as "quit high school and never go to school again" and a score of 7 as "complete additional studies after graduating from a college or university."

TABLE 2

Educational Aspirations by Ethnicity and Sex

Source of variance	SS	df	MS	F
Sex	26.7246	1	26.7246	12.7747*
Ethnicity	20.0177	1	20.0177	9.5687*
Sex x Ethnicity	0.1979	1	0.1979	0.0946
Within-cell	1131.7644	541	2.0920	

*$p < .01$.

In the two-way analysis of variance, interaction effects between sex and ethnicity were shown to be not significant. Therefore, it can be assumed that the educational aspiration levels of

the two groups did not differ significantly as sex varied in ethnicity. In the Newman-Keuls analysis (Appendix B), used to detect differences between means, the most significant difference was between Anglo males and Mexican-American females, with mean scores of 5.68 and 4.58, respectively. The difference between means was also significant for Anglo males and Mexican-American males (5.34).

Although statistically significant differences were found between Mexican Americans and Anglo Americans, similarities also existed. It should be noted that both ethnic groups desired to obtain some education beyond two years in college.

Intensity. The analysis showed that a significant difference existed between Mexican Americans and Anglo Americans on intensity of educational aspirations (Table 3). Mexican Americans had a mean score of 2.26 and Anglos had a mean score of 2.76. The respondents were asked to rank-order sever status goal areas of importance to them. A number one indicated a strong desire to achieve the status goal area, education in this case. Thus, the lower the score was, the higher the intensity of desire. In the comparison of the means there were significant differences between Mexican-American females and Anglo-American males and between Mexican-American males and Anglo-American males. It should be noted that Anglo-American males who had the highest educational aspirations had the lowest desires to accomplish those goals. Mexican-American females, on the other hand, had the lowest

educational aspirations, but the strongest intensity of aspiration. The Anglo-American male's educational aspirations may be unrealistic when compared to his desire for this educational goal. For all groups, these findings demonstrated not only awareness of high success goals but also strong feelings for such goals.

TABLE 3

Intensity of Educational Aspiration by Ethnicity and Sex

Source of variance	SS	df	MS	F
Sex	6.8203	1	6.8203	1.7413
Ethnicity	30.4017	1	30.4017	7.7800*
Sex x Ethnicity	3.8275	1	3.8275	0.9772
Within-cell	2118.9263	541	3.9167	

*$p < .01$.

Educational Expectations

Anticipated levels. The educational expectations of Mexican Americans and Anglo Americans were found to be about the same as their educational aspirations. Again there was a significant difference in the ethnicity comparison (Table 4). Mexican Americans had a mean educational expectation score of 4.80 and Anglo Americans had a score of 5.19.

Newman-Keuls analysis of differences between means showed significant values for the expectation level of the Anglo-American males (5.43) and the Mexican-American females (4.54)

and between the Anglo-American male and the Mexican-American male (5.06). Interaction effects were not significant; therefore, it can be assumed that educational expectations did not differ significantly as ethnicity varied across sex.

Although expectations were observed to be generally lower than aspirations in education, youth of both ethnic backgrounds still anticipated relatively high educational levels. Both groups thus expected to continue their education beyond high school and acquire some type of training at least up to the junior college level.

TABLE 4

Educational Expectations by Ethnicity and Sex

Source of variance	SS	df	MS	F
Sex	36.2243	1	36.2243	17.1488*
Ethnicity	18.2348	1	18.2348	8.6324*

Within-cell	1142.7852	541	2.1124	

*$p < .01$.

Certainty. The F values show that there were significant differences between Mexican Americans and Anglo Americans on the measure of certainty of educational expectations (Table 5). Mean level for Anglo Americans was 1.99 and 2.30 for Mexican Americans. On the scale used to measure certainty of expectations, a 2

indicates being "sure" and a 3 "not very sure." Anglo Americans, then, were sure about what education they expected to get, while Mexican Americans' certainty fell between being "sure" and "not very sure."

A significant difference between groups, as in educational aspirations, was found between Anglo males and Mexican-American males and females. Although Mexican Americans had lower educational expectations, they were less certain that they would accomplish their expectations.

TABLE 5

Certainty of Educational Expectations by Ethnicity and Sex

Within-cell	352.9309	541	0.6524	

*$p < .01$.

Occupational Aspirations

Desired levels. Based on the chi-square analysis, a significant difference was found between the Mexican-American group and the Anglo-American group on occupational aspirations (Table 6). An examination of respondents' replies for qualitatively differentiated categories of jobs reveals that the majority of both

TABLE 6

Occupational Aspirations by Ethnicity and Sex

[b]$\chi^2 = 127.21$ $\underline{df} = 8$ $\underline{p} < .01$.

[c]Not included in χ^2 tabulations.

Mexican Americans and Anglo Americans indicated a desire for the high categories of occupation (1, 2, and 3). Approximately 60% of the Mexican Americans and 64% of the Anglo Americans selected the top three categories. At the other end of the scale, there were similarities between the two ethnic groups, as only about 5% of each group had desires for categories 7, 8, and 9. The differences between the two ethnic groups on occupational aspirations seemed to lie in categories 5 and 6. Mexican Americans showed a higher preference for these categories than did the Anglo Americans, 26% to 12%.

Intensity. No significant difference was found between Anglo Americans and Mexican Americans in desire to accomplish an occupational goal (Table 7). On the intensity scale explained in Chapter 3, intensity of aspiration was generally strong for both ethnic groups. As was the case in intensity of aspiration for education, Mexican Americans manifested a stronger desire to accomplish their occupational goals than did the Anglo Americans. The former group had a mean intensity score of 2.17 and the latter had a mean score of 2.26.

Occupational Expectations

Anticipated levels. A significant difference does exist between Anglos and Mexican Americans on job expectations, as shown in Table 8. The occupations that both groups expected to attain were not as concentrated as were occupational aspirations. As shown, the youths' expectations ranged more evenly over the entire

[a]$\chi^2 = 40.00$ $\underline{df} = 8$ $\underline{p} < .01$.

[b]$\chi^2 = 169.17$ $\underline{df} = 8$ $\underline{p} < .01$.

[c]Not included in χ^2 tabulations.

scale. Differences between the two groups were concentrated in the top three categories. About half of the Anglo-American group expected jobs in the higher areas, while approximately 36% of the Mexican Americans had similar expectations. The "low professional" category was high with both groups, showing little divergence from the category from student occupational goals. Categories 4, 5, and 6 showed about 15% of the Mexican Americans and 28% of the Anglo Americans selected these jobs. It can be generally concluded that Mexican Americans had lower job expectations than Anglo Americans. On the whole Anglo-American occupational aspirations and expectations were more similar than Mexican-American aspirations and expectations.

Certainty. An examination of the data in Table 9 reveals that there was no significant difference between the two ethnic groups on certainty of occupational expectations. Anglo Americans had a mean certainty score of 2.23 and Mexican Americans had a mean score of 2.31. In relation to the certainty scale used in the study, both groups fell between "sure" and "not very sure."

Anticipatory Goal Deflection

Anticipatory goal deflection, as indicated in Chapter 3, is an individual measure arrived at by comparing the respondent's aspiration with his expectation. This measure applies to both education and occupation.

Educational deflection. The data in Table 10 indicate that there was no significant difference between Anglo Americans and

54

Mexican Americans on the goal deflection measure. The majority of both groups, about two-thirds, showed no deflection at all. Whenever deflection occurred, difference between aspirations and expectations, it tended to be negative; only about 6% of either group reflected positive deflection. Mexican Americans did show higher negative deflection than Anglo Americans, 33% to 21%.

Occupational deflection. The nature of deflection from occupational goals was very similar to the deflection from educational goals. The data shown in Table 11 do not reveal any significant differences between the two ethnic groups. Slightly more than half of all respondents showed no deflection at all. Wherever it did exist, it tended to be negative. Of the Mexican Americans, 29% showed negative deflection as compared to 23% of the Anglo Americans.

Sex

Educational Aspirations

Desired levels. The data indicate that a significant difference existed between males and females on the level of education desired by each group (Table 2, p. 28). Males had a mean educational aspiration score of 5.51 as opposed to 5.04 for females. In the Newman-Keuls analysis, significant differences were found to exist between Anglo males and Mexican-American and Anglo females. Anglo males had the highest aspirations of any group in education with a mean score of 5.68. As seen in Table 2, the interaction effects were not significant; therefore, it can be assumed

TABLE 11

[c]Not included in χ^2 tabulations.

56

that educational aspiration levels did not differ significantly as ethnicity varied across sex. While there was a significant statistical difference between sexes, both held generally high aspirations for education.

Intensity. On the measure of intensity of aspiration for education, the data do not reveal a significant difference between males and females (Table 3, p. 30). Females had slightly higher means than did males, 2.37 to 2.62. A score of 1 on the intensity scale signifies the strongest intensity possible. Both groups apparently valued education highly.

Educational Expectations

Anticipated levels. Data on the respondents indicate that a significant difference existed on educational expectations of males and females (Table 4, p. 31). Males had a mean expectation score of 5.25 and females a mean expectation score of 4.70. In comparison to educational aspirations, males were still maintaining a desire to receive some education beyond two years in college, while the females had fallen into the category of expecting to graduate from high school and getting some additional training. The most significant difference between means was between Anglo males and Mexican-American females. The Newman-Keuls analysis also revealed significant differences between Anglo males and Anglo females and between Mexican-American males and Mexican-American females. As in educational aspirations, Anglo-American males had the highest educational expectation (5.43) and Mexican-American females the lowest (4.54).

Certainty. There was no significant difference between males and females as to their certainty of achieving educational expectations (Table 5, p. 32). Males had a mean score of 2.08 and females, 2.23. Individual means were: Mexican-American males, 2.21; Anglo-American males, 1.96; Mexican-American females, 2.39; and Anglo-American females, 2.03. The data show that interaction between sex and ethnicity was not significantly different; therefore, it can be assumed that certainty of educational expectation did not differ significantly as ethnicity varied with sex.

Occupational Aspirations

Desired levels. The chi-square analysis performed on the occupational aspirations of males and females showed highly significant differences (Table 6, p. 33). Although there were differences in the job aspirations of males and females, both groups showed high aspirations. In fact, females selected the top three categories by a larger proportion than males; two-thirds of the females selected categories 1, 2, and 3, while only about half of the males made such selections. The differences between the occupational aspirations of both groups lay in the individual categories. Category 5, "clerical and sales," was selected by 17% of the females, but only 0.3% of the males selected this category. The "skilled worker" category was preferred by 20% males to 3.3% females. The females, on the other hand, were attracted to the glamor occupations, since about one-fifth of them made

this selection as compared to one-sixth of the males. The "high professional" and "managerial, official" categories were selected by approximately 35% of the males, but by only 14% of the females. Overall, different occupations seemed to be defined as "men only" or vice versa. Occupational aspirations appeared to be defined by tradition.

Intensity. There was a significant difference between males and females on intensity of aspiration for occupational goals (Table 7, p. 35). The difference between means was slight, 2.08 to 2.35 for males and females, respectively. Males appeared to be slightly more intense on accomplishing their educational goal than females.

Occupational Expectations

Anticipated levels. A significant difference was found to exist between males and females on occupational expectations, as noted in Table 8 (p. 36). In relation to occupational aspirations, the selections were not as concentrated at the top three levels but were more evenly divided among the nine categories. Differences still existed in the "high professional" and "low professional" categories, with males showing more preference for the "high professional" and females for the "low professional." Of the males, 16% selected category 1 compared to the selection of this category by 6.5% of the females. Females maintained a preference for category 2 by a 30% count. It should be noted that the largest percentage of females, 31.9%, really expected

jobs in the "clerical, sales" category. As was the case in occupational aspirations, the individual's occupational expectations appeared to be highly influenced by tradition.

Certainty. On the measure of certainty of occupational expectations, no significant difference between sexes was found (Table 9, p. 38). Mean scores were 2.24 for males and 2.31 for females.

Anticipatory Goal Deflection

Educational deflection. On the measure of deflection from educational goals, no significant differences were revealed in the analysis (Table 10, p. 39). Approximately two-thirds of both groups showed no deflection, i.e., their expectations were equal to their aspirations for education. A small percentage (7%) of each group held positive deflection and approximately 25% of the respondents held negative deflection.

Occupational deflection. There were no significant differences between males and females on anticipating goal deflection for occupation (Table 11, p. 41). The majority of both sexes had no deflection at all. Positive deflection was held by approximately one in 10 of each group. Negative deflection in occupation was held by about one-fourth of male and female respondents.

Grade Level

Educational Aspirations

Desired levels. The data reveal that there was a significant difference in the levels of educational aspirations for sophomores

and seniors (Table 12). Sophomores had a mean aspiration level of 5.04 and seniors, 5.52. The Newman-Keuls analysis showed that a significant difference existed between sophomores in vocational programs and all other students, whatever programs they might have been in. Sophomores in vocational programs had the lowest aspiration of any group, 4.03, and seniors in academic programs the highest, 6.21. When both grades as a whole are considered, their aspirations were generally high. Sophomores and seniors all aspired to some type of education beyond the junior college level. Interaction effects were not significant; therefore, it can be assumed that the educational aspiration level did not differ significantly as the program varied across grade level or vice versa.

TABLE 12

Educational Aspirations by Program and Grade Level

Source of variance	SS	df	MS	F
Grade	16.4608	1	16.4608	9.4416*

Grade x Program	7.2571	2	3.6285	2.0813
Within-cell	939.7065	539		

*$p < .01$.

Intensity. No significant difference was found in intensity of educational aspirations between sophomores and seniors

(Table 13). Both grade levels held fairly strong desires to accomplish their educational aspirations. The mean intensity scores were 2.44 for seniors and 2.56 for sophomores.

TABLE 13

Grade x Program	15.1599	2	7.5800	1.9316
Within-cell	2115.1199	539	3.9242	

Educational Expectations

Anticipated levels. On the measure of educational expectations, seniors and sophomores did not differ significantly (Table 14). The means were 4.80 and 5.17 for sophomores and seniors, respectively. Both groups were still expecting to attend an educational program after graduation from high school although sophomores, with a mean score of 4.80, were expecting to graduate from high school and then complete some technical or vocational program after graduation. Sophomores did not expect to complete two years in college.

Certainty. Sophomores and seniors were not significantly different on their certainty of expectation scores (Table 15). The two grade levels had almost identical mean scores, sophomores, 2.15 and seniors, 2.16.

Within-cell	358.4536	539	0.6650	

Occupational Aspirations

Desired levels. According to the chi-square analysis, there was a significant difference between sophomores and seniors on occupational aspirations (Table 16). Even though there was a significant difference, it is important to note how similar the aspirations of both groups were. If the scale were collapsed into three categories, very few differences would be noted. For example, the top three categories, which could be labeled "high" aspirations, would find about 58% of the sophomores and 59% of the seniors making such selections. Therefore, about three-fifths of all respondents held high occupational aspirations. The next three categories (4, 5, and 6) could be labeled "intermediate," and here an almost identical percentage (28%) of sophomores and seniors was present. The bottom three categories might be labeled "weak" aspirations, with approximately 4% of the sophomores and 5% of the seniors making such selections. The category showing the largest difference in terms of percentage selectivity was number 6; 13% of the sophomores made such a selection as compared to 5% of the seniors.

Intensity. There was no significant difference between sophomores and seniors on their intensity of occupational aspirations, as Table 17 shows. Both groups held relatively strong desires for their occupational goals. Sophomores had a mean score of 2.23 and seniors had a mean score of 2.19.

Grade x Program	5.4793	2	2.7396	1.4214
Within-cell	1038.8723	539	1.0274	

Occupational Expectations

Anticipated levels. There was no significant difference between the two grade levels on occupational expectations (Table 18). If the scale were collapsed as was done for occupational aspirations, the similarities would be obvious. The top three categories would still be the first preference for the largest percentage of each group. Of the sophomores and seniors, respectively, 42% and 47% had "high" occupational expectations according to the collapsed scale. About an equal percentage of each grade level selected the "intermediate" and "weak" categories on the collapsed scale. The selection of respondents on occupational expectations was not as concentrated at the top as were their aspirations, but were more evenly spread throughout the nine categories.

Certainty. There was no significant F value for the certainty of occupational expectation measure, as Table 19 indicates.

TABLE 18

Occupational Expectations by Program and Grade Level

Occupational level	General[a]				Academic				Vocational

Within-cell	604.9075	539	1.1223	

Anticipatory Goal Deflection

Educational deflection. On the matter of anticipatory deflectuib from educational goals, there was no significant difference between sophomores and seniors (Table 20). Two-thirds of all respondents showed no deflection at all, that is, their educational expectations were the same as their aspirations. Whenever a deflection occurred, it was negative. About 25% of all respondents showed negative deflection.

Occupational deflection. No significant difference was found in the analysis of goal deflection by grade level (Table 21). More than 50% of all students in both grades had no deflection in their occupational goals at all. A small percentage, about 10%, held positive deflection in the two grade levels. As was the case in goal deflection for educational aspiration, about 25% had lower expectations than aspirations.

TABLE 20

School Program

Educational Aspirations

Desired levels. The analysis on educational aspirations of students in the different curricular programs (general, academic, and vocational) showed a highly significant difference among the three groups (Table 12, p. 46). There was a wide gap in the means of the three groups. Respondents in the general program had a mean educational aspiration level of 4.89; academic program students had a mean aspiration level of 6.14; and vocational program students had a mean aspiration level of 4.44. Significant differences were noted between the sophomores in a vocational program and all other students, regardless of grade or program. Sophomores in the vocational program had the lowest mean, 4.03, of any group. Interaction effects were not significant; therefore, it can be assumed that educational aspiration levels did not differ significantly as program varied across grade level or vice versa.

Intensity. No significant difference was found among the respondents in the different programs (Table 13, p. 47). The three groups were very similar in their intensity to achieve their educational goals. The general curricula group reported a mean score of 2.66; the academic group had a mean score of 2.15; and the vocational group had a mean score of 2.80.

Educational Expectations

Anticipated levels. There was a significant difference among the different programs with regard to educational expectations (Table 14, p. 48). Means reported were 4.56, 5.89, and 4.16 for general, academic, and vocational programs, respectively. As was the case in educational aspirations, the Newman-Keuls analysis revealed that means for respondents in the sophomore-vocational cell were significantly different from all other grade-program combinations except senior-vocational. Although educational expectations were lower than educational aspirations, it is important to note that regardless of school program some post-high-school education or training was expected.

Certainty. A significant difference did not exist among the programs on the certainty measure (Table 15, p. 48). The means were 2.27, 1.99, and 2.07 for the general, academic, and vocational groups in that order. It could be that the academic and vocational groups were "sure" that they would get the education they expected.

Occupational Aspirations

Desired levels. Occupational aspiration levels did differ significantly by program (Table 16, p. 50). The academic group's aspirations were much higher than those of either the general or vocational groups. Approximately 80% of the respondents in the academic category aspired to jobs in the top three categories, so four out of every five in this group had "high" aspirations. On the other hand, about half of the respondents in the general

curricula held "high" aspirations, but only a third of the vocational group aspired to the top three categories. The general curriculum respondents were well spread out through the nine occupational categories. In contrast to the academic group, the vocational group was concentrated at the middle of the occupational scale. It is important to note that almost 50% of the respondents in the vocational curriculum had aspirations in the "clerical, sales and skilled worker" categories (5 and 6). The aspirations, in general, of vocational respondents were "low" and very "high" for the academic group.

Intensity. No significant difference was found on the intensity of educational aspirations among the different types of programs (Table 17, p. 51). The means for the general, academic, and vocational respondents were 2.31, 2.17, and 1.78, respectively. It should be noted that even though educational aspirations for the vocational group were the lowest, they maintained the strongest desires to achieve their educational goals.

Occupational Expectations

Anticipated levels. The data reveal a highly significant difference in the occupational expectations of the three groups (Table 18, p. 52). The differences appeared to exist in the top three categories where the percentages of respondents were 36.4, 66.2, and 17.6 for general, academic, and vocational in that order. The vocational group, in fact, had no student who expected a high professional job. The middle three categories were selected by

47.8% of the respondents in the general curriculum, 19.6% of the academic, and 58% of the vocational. In comparing occupational aspirations with expectations, the vocational respondents seemed to expect and aspire to the same occupation, as "low" as they may be.

Certainty. No significant difference was noted in certainty of occupational expectation among the three levels of school programs (Table 19, p. 53). The means ranged from 2.36 for the general level to 2.13 for the academic level, with the vocational group in the middle with a mean score of 2.29.

Anticipatory Goal Deflection

Educational deflection. No significant difference was shown on the deflection from educational goals (Table 20, p. 54). Over 60% of all respondents held no deflection at all, regardless of school program. As was the case in the other deflection measures, a few held positive deflection and about one-fourth of all respondents held negative deflection.

Occupational deflection. Goal deflection from occupational aspirations did not differ significantly among the three program levels (Table 21, p. 55). A majority of all respondents still showed no deflection from their occupational goals. The academic group as a whole showed less negative deflection than the other two groups, with less than one-fifth in that category. Approximately 30% of the respondents in the general group held negative deflection, with the vocational group close behind at about 26%.

Chapter 5

SUMMARY, CONCLUSIONS, IMPLICATIONS

This chapter will present a summary of the study, including the purpose, procedures, and findings. Conclusions, based on the study findings, are discussed. The last part of the chapter covers implications also based on the study findings.

Summary and Conclusions

Purpose and Procedures

The primary purpose of this study was to conduct a comprehensive survey of the educational and occupational aspirations and expectations of El Paso high school students. Specifically, the general objective was to determine the educational and occupational preferences of high school students in the El Paso area.

Data for this study were obtained from high school sophomores and seniors in the El Paso and Ysleta school districts of El Paso, Texas. An approximate 5% sample of seniors and sophomores was selected for the study. Two methods of selecting students were used: (a) A simple random list of numbers, given to the school, was used to select students from the school's sophomore and senior lists; and (b) classes were selected according to the criterion that classes chosen were required courses for either all seniors or all sophomores. In almost all classes that were chosen, the students had been randomly selected by computer.

Information on the respondents was gathered during February and early March of 1973. Data were acquired through a group-administered questionnaire. The student groups usually varied in size from 20 to 55. The site for administering the questionnaire was either a classroom where the students met for their assigned classes or the cafeteria when the group was composed of all students from the particular school.

The Kuvleskey-Bealer paradigm was utilized to investigate educational and occupational aspirations and expectations. A distinction was made between aspirations (the desires of the individual for attainment of a particular goal, such as education or occupation, in this study) and expectations (the individual's estimation of his probable attainment in reference to a particular goal area. The divergence between aspirations and expectations, anticipatory goal deflection, was also used for analyzing the respondents' answers. Intensity of aspiration was used to measure the strength of a person's desire to achieve a certain status area. Finally, certainty of expectation was utilized to measure an anticipated level of a status area.

The following dimensions of educational and occupational status orientations were studied:

A. Educational aspirations

1. Desired levels

2. Intensity of aspirations

B. Educational expectations

1. Anticipated levels

2. Certainty of expectations

C. Occupational aspirations

1. Desired levels

2. Intensity of aspirations

D. Occupational expectations

1. Anticipated levels

2. Certainty of expectations

E. Anticipatory goal deflection

1. Nature of deflection--education

2. Nature of deflection--occupation

Statistical Analysis

Two-way analysis of variance was first used with ethnicity and sex and then with grade and high school program to detect significant differences and interactions among the classifications on the different variables. Analysis of variance was used for all the variables except occupational aspirations, occupational expectations, and anticipatory goal deflection. Chi-square analysis was used for these last three variables because of the categorical nature of the data.

Hypotheses and Findings

Four of the major hypotheses will be discussed in the same order as they were presented in Chapter 4. (Additional descriptive tables are presented in Appendix C.)

Ethnicity. The findings which are summarized in Table 22 show no statistically significant differences were found between Mexican Americans and Anglo Americans on intensity of occupational aspirations, certainty of occupational expectations, and goal deflection for education and occupation.

TABLE 22

Description of Status Orientation Relationships and Summary of Analysis of Variance and Chi-Square Significance for Mexican Americans and Anglo Americans

Table	Dimension	p at .01	Nature of ethnic difference
2	Educational Aspirations	S*	A > MA

4	Educational Expectations	S*	A > MA
5	Educational Expectations--Certainty	S*	A > MA
6	Occupational Aspirations	S**	Similar
7	Occupational Aspirations--Intensity	NS*	None
8	Occupational Expectations	S**	Similar
9	Occupational Expectations--Certainty	NS*	None
10	Anticipatory Deflection--Education	NS**	None
11	Anticipatory Deflection--Occupation	NS**	None

*ANOVA.

**Chi-Square.

Mexican Americans had significantly different educational and occupational aspirations than those of the Anglo-American respondents. Even though educational aspirations were significantly different and somewhat lower for Mexican Americans, they were generally high for all respondents. Both groups maintained high

educational aspirations with desires of completing at least two years of college education. Very few anticipated dropping out or terminating their education with high school graduation (Appendix C, Table 26). It is interesting to note that while Anglo Americans had higher educational aspirations, Mexican Americans maintained a stronger intensity for their educational goals. This brings up the question as to the point of interpretation of the dimension of aspiration. Some students may interpret it as something like a "dream" which they might not think of accomplishing. Others may see aspirations in a more "realistic" light as goals which can be achieved. It seems that the problem is one of interpretation of the concept of aspiration. It appears that the Mexican American in this case interprets aspirations more "realistically."

As with aspirations, Mexican-Americans' expectations were lower than those of Anglo Americans in education and occupation. In occupational aspirations, there were differences in the individual categories, but overall there were about the same proportions of each group in selecting the "high" occupations. Very few of the two ethnic groups either aspired to or expected occupational jobs in the bottom three categories of the occupational scale.

Sex. Table 23 presents a summary of male-female status orientation relationships. The data reveal that females had lower educational aspirations and expectations than males. Both groups had aspirations of completing some post-high-school education of

at least two years of college, so it cannot be said that girls had "low" aspirations, only that they were lower than boys' aspirations. There seemed to be a greater disparity between the educational expectations of both sexes than between their aspirations. In educational expectations, boys still expected to attain at least two years of school school beyond high school, but girls expected only some training after high school graduation. Even though the role of women has changed in recent years, men and women still have different educational and occupational aspirations.

TABLE 23

Description of Status Orientation Relationships and Summary of Analysis of Variance and Chi-Square Significance for Males and Females

Table	Dimension	*p* at .01	Nature of sex difference
2	Educational Aspirations	S*	M > F
3	Educational Aspirations--Intensity	NS*	None
4	Educational Expectations	S*	M > F
5	Educational Expectations--Certainty	NS*	None
6	Occupational Aspirations	S**	F > M
7	Occupational Aspirations--Intensity	S*	M > F
8	Occupational Expectations	S**	Similar
9	Occupational Expectations--Certainty	NS*	None
10	Anticipatory Deflection--Education	NS**	Similar
11	Anticipatory Deflection--Occupation	NS**	Similar

*ANOVA.

**Chi-Square.

In looking at the data on occupational status orientations, one can discern differences between males and females. There seem to be certain occupations that are "defined" for men or woman. The "high professional" occupations appear to be the domain of men, although a few (11.4%) girls aspired and fewer (6.5%) expected to be in that category. Interestingly enough, a higher percentage of girls selected the "low professional" occupations than did boys (32% to 16%). The "clerical, sales" occupations seem to be for women only, and the "skilled worker" for "men only." The differences between the two appear to be a case, not of one having higher aspirations or expectations than the other, but of society's traditionally defined roles for men and women.

Grade. The summarized findings reported in Table 24 show statistically significant differences only in educational and occupational aspirations. Both seniors and sophomores maintained high educational aspirations, but seniors had a higher mean score of 5.52 as compared to 5.06 for sophomores. Even though there were statistically significant differences in the occupational aspirations of sophomores and seniors, there seem to be many similarities. When the scale is collapsed into three categories, an almost equal number of students is found in each category. Approximately 50-55% of all respondents fall into the first three categories, 28% in the middle three, and about 5% in the last three. Generally speaking, there were very few differences between sophomores and seniors on any of the measures taken.

TABLE 24

Description of Status Orientation Relationships and Summary of Analysis of Variance and Chi-Square Significance for Sophomores and Seniors

Table	Dimension	p at .01	Nature of ethnic difference
12	Educational Aspirations	S*	S > Soph
13	Educational Aspirations--Intensity	NS*	Similar
14	Educational Expectations	NS*	Similar
15	Educational Expectations--Certainty	NS*	Similar
16	Occupational Aspirations	S**	Similar
17	Occupational Aspirations--Intens	NS*	Similar
18	Occupational Expectations	NS**	Similar

**Chi-Square.

Program. The findings for school programs reveal that some highly significant differences existed among the three curricular programs (Table 25). The most significant differences were for educational aspirations and expectations and for occupational aspirations and expectations. Educational aspirations and expectations for the academic group were considerably higher than for the other two groups. The academic group had educational aspirations of at least graduation from college or university, while the vocational group aspired to some post-high-school training but only to the point of completing a technical-vocational program. It may be assumed that the brightest students were in the academic group;

then the differences in aspirations can be explained in terms of intelligence. The conclusion might then be drawn that the smartest students hold the highest educational aspirations. Sometimes this is not the case because some schools are more vocationally-centered than others and to say that "this" school has less intelligent students would be erroneous. Further research in the status orientations of people in different curricular programs seems appropriate. About the same conclusions that were drawn in reference to educational aspirations can be drawn in reference to occupational aspirations.

TABLE 25

Description of Status Orientation Relationships and Summary of Analysis of Variance and Chi-Square Significance for General, Academic, and Vocational Programs

Table	Dimension	p at .01	Nature of program difference
12	Educational Aspirations	S*	A > G > V
13	Educational Aspirations--Intensity	NS*	Similar
14	Educational Expectations	S*	A > G > V
15	Educational Expectations--Certainty	NS*	Similar
16	Occupational Aspirations	S**	A > G > V
17	Occupational Aspirations--Intensity	NS*	Similar
18	Occupational Expectations	S**	A > G > V
19	Occupational Expectations--Certainty	NS*	Similar
20	Anticipatory Deflection--Education	NS**	Similar
21	Anticipatory Deflection--Occupation	NS**	Similar

*ANOVA.

**Chi-Square.

Even though there were no significant differences on certainty of educational expectations among the three programs, it is interesting to note that the academic and vocational groups were more certain about their educational expectations. Perhaps these two groups have already made definite plans about their future education and jobs. The student in the general program is still feeling his way around and trying to make an occupational and educational decision. As in the other analyses, there were no differences in the nature of deflection. The ratios were approximately two-thirds, one-tenth, and one-fourth for no deflection, positive deflection, and negative deflection, respectively.

Implications

Theory and Research

The results on educational and occupational aspirations of Mexican Americans and Anglo Americans provide support for Merton's (1957) theory of social structure and anomie inculcation of high success goals of various kinds (educational and occupational in this study). Merton's contention was that inculcation of high success goals exists as a general pattern among differentiated segments of American society. Most students, regardless of ethnic background, held high aspirations for education and occupation. The findings that Mexican Americans have high social achievement goals squarely contradict some widely held stereotypes of Mexican Americans as being lazy, nonmotivated, and living only for today

and not tomorrow. Surely these findings support what Kuvleskey (1969) found in the Texas A&M studies and bring to question the sociological studies of Heller (1968), Madsen (1964), and Schwartz (1971) among others. Do Mexican Americans, as Heller and Madsen maintain, have low aspirations or expectations? Probably not. Most people, as Merton (1957) maintained, do have high aspirations regardless of ethnic or social background. Further research is needed on aspirations to investigate closely if differences are due to ethnicity or socioeconomic and other factors. The fact that these groups do not reach their aspirations may be due more to lack of opportunities, finances, and discrimination than to lack of motivation or desire.

The research findings of a Louisiana study (Mondart et al., 1970), which indicated that high school students develop strong occupational interests by the eleventh grade, are generally supported by the data in this study. Many students, sophomores and seniors, were certain about what occupations they hoped to pursue. Further longitudinal-type research is needed to evaluate the point in time when people do, in fact, make realistic occupational choices.

Along the lines of the Mondart study, a Texas study project found that a large number of youth's status projections went up (Kuvleskey, 1969). In the analysis for this study of sophomore and senior educational aspirations, educational aspirations did go up for seniors. If this is true, then it contradicts Ginzberg's

phase theory which contends that with age and maturity aspirations and expectations become more realistic.

Policy

From the data of this research an obvious conclusion may be made that educational and occupational aspirations and expectations are high for all students in El Paso. Not only do students desire some type of education beyond high school, they expect it. It is, then, the responsibility of post-high-school educational institutions to provide that training which is obviously needed.

Specifically, more than 90% of the students in this study indicated that they would take some courses or training beyond high school (Appendix C, Table 30). A comprehensive program is needed to meet the needs of these students. An educational institution must then be prepared to offer a varied course of study which would include training in technical-vocational areas plus regular college work. The traditional university can meet some of these demands. Approximately 17% of all students preferred the "high professional" occupations. These students could well be served by the college or university system. The rest, or approximately 75%, wanted jobs that would require some additional training beyond high school. The community college with its comprehensive program is in an excellent position to provide much of the training or education desired by the high school population.

Since such a large percentage of students desire and expect some type of educational training beyond high school and many cannot afford it, the community colleges and universities should promote programs that would help students achieve their desires. The schools would do well to promote scholarship programs, work-study programs, and loan programs, in order to enroll as many students as possible. Students have the desires and the motivation for high educational and occupational attainment. It is up to society and its educational institutions to help fulfill those desires.

APPENDIX A

QUESTIONNAIRE

CONFIDENTIAL No. _____

EL PASO TEXAS YOUTH STUDY

This set of questions is part of a study of high school students in the United States. The purpose of this study is to learn more about what students think about their future and what they plan to do after they leave high school.

THIS IS NOT A TEST: There are no right or wrong answers. We are only interested in finding out your opinions about some important matters. No one in your school will ever see your answers. Special safeguards have been set up to make sure that your replies will be kept strictly confidential.

You do not have to answer any questions you do not want to answer. However, we hope that you will cooperate to make this a good scientific study by answering all the questions as frankly and honestly as you can. We appreciate your help very much.

1. How old are you today? (Circle the number above your age.)

1	2	3	4	5	6	7	8
13 or less	14	15	16	17	18	19	20 or more

2. Are you male or female? (Circle one number.)

1. Male 2. Female

3. What school grade are you in? (Circle the number above your grade.)

1	2	3	4
Ninth	Tenth	Eleventh	Twelfth

4. Where do you live? (Circle one number.)

1. City (over 2,500)
2. Town or village (under 2,500)
3. In the country, but not on a farm
4. On a farm

5. Do you have any physical handicaps? (Circle one number.)

1. Yes 2. No

6. What is your race? (Circle one number.)

1	2	3	4
American Indian	Ori-ental	Negro	Cauca-sian

7. Are you of Mexican-American origin? (Circle one number.)

1. Yes 2. No

---

8. What kind of program are you taking in school? (Circle one number.)

1	2	3	4
General	Academic or College Prep.	Vocational	Other (What? _____)

---

9. If you were completely free to choose any job, what would you most desire as a lifetime kind of work? (In answering this question, give an exact job. For example, do not say "work on the railroad," but tell us what railroad job you would like to have.) Write your answer in the box below.

ANSWER: [ ]

---

10. Listed below are a number of things that most young people look forward to. Rank them in order of their importance to you. For the one you think is most important, check number 1 in front of it; for the next most important one, check number 2, and so on until you have a number checked for each one. Read over the entire list before answering the question. (Check only one number beside each sentence and check each different number only once.)

Order of Importance to You 1	2	3	4	5	6	7	
___	___	___	___	___	___	___	Having lots of free time to do what I want.
___	___	___	___	___	___	___	To develop my mind and get all the education I want.
___	___	___	___	___	___	___	To earn as much money as I can.
___	___	___	___	___	___	___	Getting the job I want most.
___	___	___	___	___	___	___	Living in the kind of place I like best.

Order of Importance to You

1	2	3	4	5	6	7	
___	___	___	___	___	___	___	Having the kind of house, car, furniture, and other things like this I want.
___	___	___	___	___	___	___	To get married and raise a family.

CHECK YOUR ANSWERS! <u>You should have each number checked only once and a single number should be checked for each statement</u>.

---

11. What kind of job do you really expect to have most of your life? (Write your answer in the box below. Please give an <u>exact</u> job!)

ANSWER: [ ]

---

12. How sure do you feel that this will be the kind of work you <u>will do</u> most of your life? (Circle one number.)

I feel:	1	2	3	4	5
	Very sure	Sure	Not very sure	Uncertain	Very uncertain

---

13. If you could have as much education as you desired and were completely free to choose, which of the following would you do? (Circle only one number.)

1. Quit high school and never go to school again.
2. Quit high school and take some vocational training for a job.
3. Graduate from high school and never go to school again.
4. Graduate from high school and then complete a business, commercial, nurses' training, or some other technical school program.
5. Graduate from a junior college.
6. Graduate from a college or university.
7. Complete additional studies after graduating from a college or university.

---

14. What do you <u>really expect</u> to do about your education? (Circle only one number.)

1. Quit high school and never go to school again.
2. Quit high school and take some vocational training for a job.
3. Graduate from high school and never go to school again.
4. Graduate from high school and then complete a business, commercial, nurses' training, or some other technical program.
5. Graduate from a junior college.
6. Graduate from a college or university.
7. Complete additional studies after graduating from a college or university.

---

15. How sure are you that you will really achieve the education you expect? (Circle one number.)

I am: 1	2	3	4	5
Very sure	Sure	Not very sure	Uncertain	Very uncertain

---

16. How much effect do you think each of the following things will have in <u>keeping you from getting</u> the kind of job you desire?

Very much	Much	Some	Not at all	
___	___	___	___	1. My religion.
___	___	___	___	2. Can't afford to go to technical school or college.
___	___	___	___	3. The schools I have gone to.
___	___	___	___	4. Lack of parents' interest.
___	___	___	___	5. Ability to borrow money.
___	___	___	___	6. My race.
___	___	___	___	7. Don't want to move.
___	___	___	___	8. Good jobs are getting too scarce in the U.S.
___	___	___	___	9. Lack of good job opportunities in or near my community.
___	___	___	___	10. No technical school or college nearby.
___	___	___	___	11. Don't know enough about the opportunities that exist.
___	___	___	___	12. Have to help support my family.
___	___	___	___	13. Not smart enough.

---

17. Of the kind of places listed below, in which one would you most desire to live for the rest of your life? (Circle only one number.)

In a City	Near a City	Not near a City
1. Very large	3. In a town or village	6. In a town or village
2. Small	4. In the country but not on a farm	7. In the country but not on a farm
	5. On a farm	8. On a farm

---

18. From the kinds of places listed above, what type of place do you really expect to live most of your life? Place the number of this type of place in the following box:

[ ]

---

19. How sure are you that you will live in this kind of place? (Circle one number.)

I am:

1	2	3	4	5
Very sure	Sure	Not very sure	Uncertain	Very uncertain

---

20. How much money would you desire to make a year if you could have any amount you desired? (GIRLS: If you plan to marry, indicate the amount of money you would like your husband to make.) Place your answer in the following box:

[$ a year]

---

21. Do you want to go into military service? (Circle one number.)

1. Yes 2. No

---

22. What do you expect to do about military service? (Circle only one number.)

1. Quit high school and enlist.
2. Enlist right after high school.

3. Go to college and take officers' training.
4. Enlist in the Reserves or National Guard.
5. Not eligible--I have a physical disability.
6. Get out of going some way or other.
7. I am a girl and do not plan to enlist.

---

23. How sure are you that this what you will do? (Circle one number.)

I am:

1	2	3	4	5
Very sure	Sure	Not very sure	Uncertain	Very uncertain

---

24. What is the highest yearly income that you <u>really think</u> you will ever be able to make? (GIRLS: If you plan to marry, indicate what you think will be the highest yearly income your husband will ever make.) Place your answer in the following box:

$ a year

---

25. How sure are you that this will be the highest income you will ever make? (Circle one number.)

I am:

1	2	3	4	5
Very sure	Sure	Not very sure	Uncertain	Very uncertain

---

26. At what age would you like to get married?

---

27. How many children do you want? (Circle one number.)

1 2 3 4 5 6 7 8 or more

---

28. At what age do you really expect to get married? [ ]

---

29. a) Do you speak Spanish? (Circle one number.)

1. Yes 2. No

If you answered yes, you do speak Spanish, answer the following questions:

b) What language do you usually use when speaking with your parents? (Circle one number.)

1. English 2. Spanish 3. About the same amount of both

c) What language do you usually use when talking with your close friends outside of class? (Circle one number.)

1. English 2. Spanish 3. About the same amount of both

d) What language do you usually use when speaking with your close school friends outside of class? (Circle one number.)

1. English 2. Spanish 3. About the same amount of both

---

30. How many of the radio programs you listen to are broadcasted in Spanish? (Circle one number.)

1. None 2. Some 3. More-than-half 4. All

---

31. How many of the magazines and newspapers which you read are in Spanish? (Circle one number.)

1. None 2. Some 3. More-than-half 4. All

---

32. Where were your parents born? (Give the town and state.)

Mother _____

Father _____

---

33. (a) If you were to get additional schooling after you leave high school, which of the following types of colleges would you most likely go to: (Circle only one!)

1. A community or junior college
2. A small, private 4-year college
3. A large, private college
4. A small, state college or university
5. A large, state university

(b) If you can, give the name of the college or university you think you would probably go to in the box below:

---

34. (a) If you were to go to a college or university, would it be: (Circle only one!)

1. As close to home as possible
2. Within daily traveling distance of my home town or city
3. Somewhere else in Texas
4. Out of state

(b) Would it be: (Circle only one!)

1. Full time
2. Part-time -- regular
3. Once in a while
4. Don't know

---

35. (a) Whether you plan to go on to college or not, is there a good chance you might take some courses or training after you finish school? (Circle only one!)

1. Yes
2. Maybe
3. No
4. Not sure

(b) If you answered Yes or Maybe, please check those kinds of things listed below you might consider taking:

___ 1. Technical Vocational Courses - secretarial, accounting, mechanics, drafting and nursing

___ 2. Transfer courses (college level) - English, history, science, math, and Spanish

___ 3. Continuing education courses - hobbies, cooking, art, etc.

---

36. How would you be able to finance any schooling or training you might take after high school? (Circle all that apply.)

1. By working while I'm in school or taking courses
2. By working in the summer
3. My parents or relatives will pay for me
4. By getting a loan
5. By getting a scholarship
6. I already have the money for that
7. Others: _____

---

37. Designate the geographical area in which you reside. (Circle one.)

1. South
2. East
3. Northeast
4. Northwest

---

38. What kind of courses or programs would you like to see a community college in this area offer? Answer in your own words below.

_____
_____
_____
_____

No _____

As we mentioned before, your answers to those questions are already confidential. No information about particular persons will be given to your school or anyone else. However, we will need your name and address so that we can locate and contact you several years from now. Please give us the following information!

PLEASE PRINT

(a) Your present address

First name	Middle initial	Last name

Street address

City or town	County	State

Telephone number

(b) Name and Address of relative or friend (living at a different address from the one you gave above) who will always know where you are living if you should move in the next few years.

First name	Middle initial	Last name

Street address

City or town	County	State

Telephone No.

THANK YOU FOR HELPING US!

ABSTRACT

The North Dakota State Board for Vocational Education determined that a Mobile Welding Instructional Lab was needed to provide welding training in North Dakota. The prime purpose of a mobile laboratory is to provide upgrading training for persons employed as weldors.

The North Dakota State School of Science was authorized and funded to develop and implement use of the unit. The unit will have been in use about three months as of the date of this report. The first year of use will assist in the development of a pattern of efficient use of the unit. It will also serve to provide necessary input to the development and use of future mobile labs for other vocational programs.

INTRODUCTION

The North Dakota State Board for Vocational and Technical Education determined that a Mobile Welding Instructional Lab was needed to provide training at sites where training facilities did not exist or to supplement existing facilities as needed.

PLANNING GRANT

A planning grant of $2,000 was awarded to the North Dakota State School of Science. The planning grant enabled the college to research a plan, develop a budget and draw specifications for a mobile welding laboratory.

PROCEDURE

The Trades Division of the college developed a budget, developed a plan and prepared specifications for a Mobile Welding Instructional Lab. The plan appears as Attachment A. The college purchasing officer developed bid specifications. The bid was awarded to M.O.V.E., Inc. of Benton, Arkansas.

Designated faculty were in periodic contact with the builder and conducted on-site inspections at the two-thirds and final building stages.

While the anticipated delivery date was November 1, 1975, the actual delivery date was February 10, 1976.

After delivery, additional work was needed to make the unit ready for instruction. Slow delivery of essential parts required an additional wait of five weeks before it was indeed ready for instruction.

The unit was tested for performance while on campus.

The first use for inservice instruction was in Fargo, North Dakota on March 24.

MOBILE WELDING INSTRUCTIONAL UNIT

The unit is 14 feet by 60 feet. It has a total of sixteen wheels to support this heavy unit properly so the frame will not be damaged.

The mobile welding lab has ten welding stations as well as essential support equipment.

Each welding station includes: oxy acetylene welding and cutting, stick electrode arc welding, arc air cutting, Heli-arc (TIG), and wire fed (MIG) at five stations. All equipment is of industrial quality.

The unit includes pipe beveling equipment, automatic cutting torches, approved AWS guided bend testing equipment, a power shear and other essential support equipment.

The unit is air conditioned, electrically heated and has proper venting. A classroom facility is also provided with all the necessary teaching aids.

The college has secured the use of a donated 8 foot by 38 foot semitrailer van which will be used as a support unit.

This unit will be used for storage of materials and eventually for an instructional unit for selected operations.

BUDGET

The budget approved for the first year of operation was:

$22,198	Salary and fringe benefits
8,200	Travel and per diem
250	Supplies
82,813	Unit and equipment
2,145	Transportation of unit
500	Insurance
800	Maintenance and miscellaneous
150	Communication
$117,056	Total approved

Because of the late arrival of the unit and several essential adjustments, modifications will be made to the initial budget figures.

Future budgets will provide for cost of energy, cost of power hook ups, and support unit costs.

Income from charges to students will reduce the amount of actual reimbursement claimed.

CONSULTING COMMITTEES

Two consulting committees serve the unit.

The Technical Consulting Committee which serves the college welding program also serves as the Unit Advisory Committee.

A Site Selection Consulting Committee was convened to assist in establishing guidelines for scheduling use of the unit.

In each case, the committee is representative and was directed to consider the welding area and the needs of North Dakota as recommendations were made.

The committees have provided enthusiastic help and have pledged continuous support.

STAFF

A qualified instructor was employed as a part of the college welding faculty. It is anticipated that additional staff will be employed, if needed, to meet demands which exceed the time available for one instructor.

Users who wish to provide their own instructor may do so upon requesting and receiving approval from the Director of Continuing Education at the North Dakota State School of Science.

PUBLICITY

Brochures were developed and distributed to potential users of the lab.

The college news bureau prepared news releases which were distributed to news media including specialized publiciation.

An open house was scheduled which attracted many visitors.

The consulting committees have discussed use of the unit with other groups with which they are involved.

The North Dakota State Board for Vocational Education has provided publicity through radio announcements.

SCHEDULING

Scheduling use of the unit will be done through the Continuing Education Division of the college in direct consultation with the state Supervisor of Trade, Industrial and Health Education of the Vocational Board. Consideration will be given to the intent of the unit and to recommendations of the Site Selection Consulting Committee.

Scheduling considers the objectives of the unit which include:

1. To provide short term inservice upgrading and/or retraining education for persons employed as weldors who need specialized short term inservice training to meet specific job needs.

2. To provide welding training for adults who are underemployed, unemployed and for minorities who require welding training for a specific job.

3. To provide a weldor with enough skill and knowledge so that he will have immediate value to his employer.

4. To provide specialized and supplemental welding training programs which will meet the welding needs of North Dakota by offering welding instruction at locations convenient to those who need instruction.

5. To qualify weldors for jobs which require certification or for code welding.

Numerous factors must be considered as a move to a site is contemplated. The factors include items such as:

1. Number of persons needing training

2. Length of training

3. Type of training needed

4. Urgency of training

5. Available electric power

6. Available space for parking of unit and support unit

7. Location of proposed training versus present location of unit

8. Securing a competent mover

9. Housing for staff

10. Road conditions

11. Availability of practice materials

Potential users are required to complete a request form. This appears as Attachment B.

A representative of the college will meet with potential users to validate need, to develop curriculum and to inspect the proposed site.

Individual training programs will be developed to meet the needs of each group who requires training.

As potential users become aware of the unit, the Advisory Committee members feel that demands for use will exceed availability of the unit. It should be noted that if needs exist and if staff, students and finances are available, the unit could be used on a two or three shift per day basis.

PROBLEMS

The unit is the first of a kind. Every action is a new experience. Each first use reveals problems which cannot be solved by experience because experience is not available.

The challenge of satisfying the needs of several users during the same time period causes time demands.

Administration of a mobile unit is different than as activity on a campus. Flexibility in methods of administration is essential.

Consulting committees agree that all involved must be patient and understanding as the various problems of implementing use of the unit occur.

CONCLUSION

The Mobile Welding Instructional Lab is available to serve welding training needs of adult workers as needed and where needed in North Dakota.

Potential users have a responsibility to take advantage of the unit and to assist in effective use of the unit.

The unit was developed to serve needs of users. It is ready for use.

North Dakota State School of Science

"A STATE SUPPORTED COMPREHENSIVE COLLEGE SERVING ALL OF NORTH DAKOTA"

TELEPHONE 701 671-1130
WAHPETON, NORTH DAKOTA 58075

Thank you for your request to use the Mobile Welding Instructional Laboratory. Please read the following general information before you respond to the questions or statements which appear in the "information requested" portion of this correspondence.

The completed form should be sent to: Mobile Welding Instructional Lab, North Dakota State School of Science, 708 Dakota Avenue, Wahpeton, ND 58075. Telephone: 671-3802.

1. The primary purpose of the unit is to retrain or upgrade persons employed as weldors.

2. The unit is designed for statewide use and must be used at needed locations throughout the state.

3. The tentative minimum time the unit shall be used in an area is four weeks. The maximum time will vary with the needs at a site and needs at other sites.

4. Prior to submitting the information requested, training facilities at local schools should be investigated. The unit is not intended to replace any existing training. It is available to provide training in locations where training is not available or existing training facilities are so busy that all the needs cannot be met.

5. Lead time for planning is necessary. When all users in an area are identified, one of our faculty will meet with the users to determine content and length of training needed by each group in an area.

Scheduling hours of use of the unit will be developed at this planning meeting. We anticipate the possibility of day, evening and weekend instruction.

The instructor/coordinator for the unit is Mr. Ron Pfaff. He will instruct as well as supervise other instructors who may qualify to instruct if demands for use exceed the use of one instructor.

If the demands for instruction per day exceed eight hours or 40 hours per week, can you suggest other instructors? Please list names and addresses.

Names and addresses of potential instructors:

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

6. We strongly encourage you to call a meeting of all possible users in your area as the information part of this correspondence is completed.

7. Persons receiving instruction will be required to furnish their own welding helmet, safety glasses, acetyelene goggles, lighter, pliers, leathers and gloves.

8. Costs will be calculated on a per student hour basis. Costs will be determined when the type of welding instruction for a group has been decided. Costs will include cost of all power, all welding supplies and a maintenance charge.

INFORMATION REQUESTED

Please respond to the following requests for information. The responses will aid the Site Selection Committee in decision making.

Your Name: _____

Your Business Name: _____

Mailing Address: _____

_____

Telephone: _____

1. Please complete attachement A in as much detail as possible.

2. What is the preferred time of the year when you need the unit in your area? Be specific. Give several choices.

_____

_____

_____

3. Will an area firm be able to donate metals for practice welding? If yes, please state name of firm and contact person.

_____

_____

_____

_____

4. Donated space for the unit is required. An acceptable location requires the following:

   a. The unit is large. The access must be easy and free of obstacles to allow manuvering room for the unit and delivery vehicle. Space is also needed for a storage vehicle and for parking. A hard surface parking area is preferred. Soft ground is not ideal for parking a unit of this size.

   b. Access to nearby bathroom facilities during hours of operation is a must.

c. Access to three phase overhead power is needed. Your local power supplier should be contacted. The unit requires a three phase 120/240 volt four wire delta overhead service with 150 KVA of transformer capacity. The unit has an 800 amp main entrance (600 amps for welders and 200 amps for heating, lights, and air conditioning) with 2-500 MCM copper conductors per phase on the overhead service mast. Three current transformers and a meter are permanently mounted on the unit for metering purposes.

d. Please list name, address and phone of firm or person who will donate space.

_____

_____

_____

_____

e. Please list name address and phone of electrical power supplier.

_____

_____

_____

_____

_____

f. If the electrical requirements are not available at a site, please get an estimate from the electrical supplier as to cost of providing the needs stated in 4.c.

TITLE: A PILOT PROJECT TO DEVELOP, INITIATE AND EVALUATE A POST-SECONDARY PROGRAM IN OCEANIC AND MARINE TECHNOLOGY. FINAL REPORT.

DESCRIPTOR: *MARINE TECHNICIANS; *CURRICULUM DEVELOPMENT; *PROGRAM DESCRIPTIONS; *POST SECONDARY EDUCATION; OCEANOLOGY; *PILOT PROJECTS; TECHNICAL EDUCATION

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 74P.; PAGES 55 THROUGH 59 CONTAINING PHOTOGRAPHS OF PROJECT ACTIVITIES AND PAGE 68 CONTAINING A COPYRIGHTED JOURNAL ARTICLE WERE REMOVED. THEY ARE NOT INCLUDED IN THE PAGINATION.

ABSTRACT: COVERING THE TIME PERIOD FROM SEPTEMBER 1971 TO JUNE 1972, THIS FINAL REPORT DESCRIBES A PILOT PROJECT TO DEVELOP, INITIATE, AND EVALUATE A POSTSECONDARY EDUCATION PROGRAM IN OCEANIC AND MARINE TECHNOLOGY AT BRAZOSPORT COLLEGE IN LAKE JACKSON, TEXAS. PART I CONSISTS OF BACKGROUND DATA; PART II, THE RESEARCH PROJECT SUMMATION AND FINAL REPORT; AND PART III, A PHOTOGRAPHIC ANNEX. PART I CONTAINS INFORMATION CONCERNING THE COLLEGE FACILITIES, PERSONNEL, CURRICULUM, DESCRIPTION OF COURSES, COURSE OUTLINES, CLASS AND LABORATORY SCHEDULES, TEXTBOOK LISTS, TEACHING OBJECTIVES, LIST OF GUEST SPEAKERS AND PROSPECTIVE AREA EMPLOYERS, FORMS PERTAINING TO THE SUMMER PRACTICUM, AND SAFETY RULES AND PROCEDURES. PART II SUMMARIZES THE PROJECT OBJECTIVES; DESCRIBES PROCEDURES AND METHODS; AND PRESENTS THE FINDINGS, CONCLUSIONS, AND RECOMMENDATIONS. ACCOMPLISHMENTS INCLUDED DEVELOPMENT OF THE CURRICULUM, SELECTION OF EQUIPMENT, RECRUITMENT OF 34 STUDENTS, IMPLEMENTATION OF THE PROGRAM INCLUDING THE USE OF TWO TRAINING VESSELS, AND SUMMER PLACEMENT IN MARINE-RELATED INDUSTRIES. IN EVALUATION OF THE FIRST YEAR, IT WAS CONSIDERED THAT THE BEHAVIORAL OBJECTIVES WERE ACHIEVED AND THE RESEARCH PROJECT WAS HIGHLY SUCCESSFUL. APPENDED IS A FINAL SECTION OF NEWSPAPER CLIPPINGS AND LETTERS OF SUPPORT. (NJ)

FORWARD

A final report covering the Brazosport College, Texas Education Agency Research Project conducted by the Department of Oceanic and Marine Technology during the period of September 1, 1971 to June 30, 1972 is forwarded herewith. The Research Project was designed to develop, initiate and evaluate a post-secondary educational program in Oceanic and Marine Technology.

The final report to the Texas Education Agency, Division of Research will embrace the following considerations: (1) Program objectives; (2) Program procedures; (3) Research project findings; (4) Investigator's conclusions, recommendations and (6) Relevant supporting information.

The Final Report consists of Part I, background data relevant to the conduct of the research project, Part II, the research project summation and final report, and Part III, photographic annex.

Edward D. Middleton, Director
Oceanic and Marine Technology
Brazosport College

ACKNOWLEDGEMENTS

The following individuals are recognized for their contributions and assistance in conjunction with the concept and development of the Oceanic and Marine Technology Program.

Dr. J. R. Jackson, President, Brazosport College

Dr. W. A. Bass, Vice President, Academic Affairs

Col. Franz Ross, Consultant, Executive Director, Shrimp Producers Information Center, Port Charlotte, Florida

BRAZOSPORT COLLEGE - ORGANIZATIONAL INFORMATION

BOARD OF REGENTS

Dr. W. D. Nicholson - Chairman

Mr. Ralph Buell - Vice Chairman
Mr. D. V. Collins
Mr. M. S. Johnson
Mrs. Frances Landsborough
Dr. B. R. Mayse
Dr. J. A. Stewart
Mr. V. S. Sumerford
Mr. J. L. Wilson

ADMINISTRATION

Dr. J. R. Jackson - President
Dr. W. A. Bass - Vice President, Academic Affairs
Dr. W. G. McAlexander - Dean Of Students
Mr. Jack Maris - Business Manager
Mr. Truman T. Isbell - Director of Occupational Education
Mr. Robert S. Montgomery - Coordinator of Evening Programs
Mr. John Dunn - Director of Instructional Resources
Mr. L. Jay Williams - Director of College Information
Mr. James Barta - Registrar

COUNSELORS

Mr. George Barnett
Mr. J. Huntley Kenesson
Mrs. Loretta Senterfitt

CURRICULUM ADVISORY COMMITTEE

Roger Hoss - Owner, Sea Hoss Marine Enterprises
W. W. Gore - Owner, Western Seafood
Buster Curry - Vice President, First Freeport National Bank
F. T. Ainsworth - Manager, U.S. Area Marine Distribution and Traffic, Dow Chemical Company
Joe L. Williams - Owner, Williams Diesel and Supply

INTRODUCTION

With three fourths of the world existing as ocean and with only approximately six percent of the ocean floor having been explored by man, it is strikingly evident that the world's oceans pose a dramatic challenge and a nearly limitless solution to some problems in the realm of humanity.

With such realizations, the interest in the sea and its resources has been steadily and rapidly increasing throughout the world population.

National and state interests in this "hydrosphere" has run apace, until today promises exciting opportunities in career fields allied with ocean science and technology in the years immediately ahead. These career fields promise to be both personally and financially rewarding.

While many centers for the study of and the promulgation of marine science have been established, and while marine science has made tremendous forward strides on all fronts, the utilization of the sea, its resources and associated vehicles and equipment, as opposed to the knowledge embodied by marine science, has been lagging in the background.

Along with burgeoning activities in oceanography, comes a vital demand for the development of supporting technology and the production of skilled oceanic and marine technicians.

Off-shore industry, marine petro-chemical operations, sports and recreational water activities, commercial fisheries, oceanographic exploration and research companies and many others are searching for trained man-power in the area of vessel and equipment operations, in order to cope effectively with the tremendous growth of marine technology now in progress.

With this picture and these needs in mind, Brazosport College has established a new program in Oceanic and Marine Technology. This program will train young people for ocean-associated careers with industry.

FACILITIES AT BRAZOSPORT COLLEGE

GENERAL: The college plant is unique in that its 215,000 square feet of floor space is all under one roof. All classrooms, offices, library, student activity room, snack bar, little theatre, gymnasium, and science laboratories are air conditioned. An especially interesting feature is the integration of academic and occupational educational facilities. Shops, classrooms, and laboratories are dispersed in such manner that students enrolled in academic and occupational courses mingle. It is believed that by bringing students together who are pursuing different educational and vocational goals, a better understanding and appreciation of each other will be achieved in a natural manner.

The college is bounded on two sides by the winding, historic Oyster Creek. The facility is located on 156 acres of beautiful naturally landscaped land. It is ideally located in that it is easily accessible from Freeport, eight miles from Angleton, two miles from Lake Jackson, Clute, Richwood, and Lake Barbara. It is only eleven miles from Brazoria, nineteen miles from Sweeny. It is accessible from Highway 288, Highway 332 and County Road 288.

Adequate hard surfaced parking space is provided and additional space is available for future needs.

The first building program provides for 1,100 full-time student equivalents. Water, sewer, utilities, library space and offices for an enrollment of 2,000 FTSE is included in the first building program. A master plan for a campus to adequately care for 4,500 FTSE has been prepared and will facilitate future expansion.

SPECIFIC: In addition to regular classroom availability as required, specifically designated laboratory and office spaces were assigned to the project. Regular classrooms average 576 square feet in area and were utilized on a flexible basis; i.e. drafting classroom equipped with drafting tables and stools were available for navigation classes, electronics laboratory and classrooms for marine electronics, etc., contingent upon project needs and classroom-laboratory availability.

Office space specifically assigned to the project was programmed at 96 square feet and laboratory-bay areas at 3,072 square feet.

Equipment in the categories of navigational, seamanship, fisheries, engineering, marine electronics, diving, firefighting, furniture and text and reference material were available to the project.

STATEMENT OF NEED

The technical-Vocational Advisory Committee of Brazosport College placed a high priority on an Oceanic and Marine Technology program. This priority was based on a survey of persons involved in local marine enterprises, and indicated an immediate need of 150-200 trained people at that time (1968) in the local marine enterprises. The committee feels that at this time (1972), the need is as great if not greater than at that time

To substantiate the survey of local marine interests, the firm of Industrial Consultants of Port Charlotte, Florida, was retained to do a study of the need for trained personnel in the marine field for the Gulf Coast. This firm was retained because they already had a comprehensive study of the shrimping industry underway and our needs could be met by this group with little additional effort.

The report of Industrial Consultants stated that the single major problem for the shrimping industry was "an extreme shortage of qualified captains/crewmen and the costly turnover rate" of these personnel.

The situation of the shrimping industry can be extended to other parts of the marine interests of the Texas Gulf Coast. The following quote from the Industrial Consultants report points up other effects of this shortage.

> The shortage of qualified personnel in all industries that use small vessels results in a chain reaction that adversely affects other industries. As an example, the answers to queries directed to several ship-building firms indicated that if trained crewmen were available there would be a considerable increase in small vessel construction. This includes not only fishing vessels, but yachts, river tug boats, off-shore supply vessels, in fact, every area of small vessel (200 tons and under) construction.

It appeared obvious to us that a great need existed. Our continued involvement with persons in this field only increases our awareness of the needs.

BRAZOSPORT COLLEGE

OCEANIC AND MARINE TECHNOLOGY

Operational Summary 1971-72

OBJECTIVES:

1. To train students to be vessel operators, i.e. Masters (captains), Mates, Able Seamen, Deckhands, Engineers, Tankermen.

2. Prepare students for examinations for U.S. Coast Guard Marine License to 1,000 tons for Masters, 10,000 HP Diesel for Engineers.

3. To train students to be marine technologists in the utilization of specialized equipment pertaining to specialized vessel operations.

4. Prepare students for employment with marine related businesses and industries.

ACCOMPLISHMENTS DURING THE PAST TWELVE MONTHS:

1. Program planning and initiation (develop curriculum, selection of equipment, etc.)

2. Student recruitment to 34 full time students with 4 students enrolled in some courses the first semester. Enrollment of 30 full time students and 3 part time the second semester.

3. Program implementation, including use of 65 foot steel hull diesel training vessel and 130 foot industrial type vessel.

4. U.S. Coast Guard initiated administrative procedures for the Oceanic and Marine Technology class to obtain basic mariner's document, i.e. deckhands, oilers and wipers.

5. One student successfully passed examination for license and was awarded 100 ton Master's License the second semester.

6. Students have been placed in marine related industries in order to undergo the Summer Industrial Practicum

SUMMARY:

Thirty-four full time students enrolled in the first semester program, thirty in the second semester program.

It is anticipated that forty freshmen and twenty sophomore students will enroll for the 1972-73 program.

PERSONNEL

NAME: Mr. Truman T. Isbell

POSITION: Directs technical-vocational programs for Brazosport College

TITLE: Director, Technical-Vocational Studies

EXPERIENCE: M.S. Degree Texas A&M University, Industrial Education; post graduate work University of Illinois; three years vocational machine tool experience; ten years teaching experience, technical and vocational subjects in junior and senior college; five years administration public school; four years administration state agency and junior college in technical vocational education; four years manufacturing research and development and administration with aerospace industry.

RESPONSIBILITY: Mr. Isbell's responsibilities within the project entailed overall supervisory, advisory and support duties.

NAME: Edward J. Middleton, Jr.

POSITION: Directs and coordinates the Oceanic and Marine Technology program at Brazosport College.

TITLE: Coordinator, Oceanic and Marine Technology

EXPERIENCE: Mr. Middleton graduated from the U.S. Coast Guard Academy with a bachelor of Science degree in Marine Engineering and has done graduate work at George Washington University and Incarnate Word College. He served in all deck officer positions, to include second in command, aboard destroyer escort type vessel with the U.S. Navy and Coast Guard during World War II in trans-Atlantic and trans-Pacific operations. Served as Air-Sea Rescue

Controller in New York and Boston and commanded three U.S. Coast Guard vessels in Gulf waters; he directed ocean terminal and port operations in the Far East and served as Deputy Chief Marine Division and as Chief of Navigation and Seamanship at the U.S. Army Transportation Center. Also was assigned as vessel inspector in Marine Maintenance and Repair activity. He taught oceanography and Ocean Engineering for 2 1/2 years and directed a SCUBA diving school.

RESPONSIBILITY: Mr. Middleton's responsibilities within the program entailed proposal development and implementation and coordination of the project. He devotes one hundred percent of his full time duties to the project and this commitment has been one hundred percent assured by Mr. Middleton and the President of Brazosport College.

RESEARCH PROJECT IN OCCUPATIONAL EDUCATION

Submitted to the Division of Occupational Research and Development,
Department of Occupational and Technical Education,
Texas Education Agency

TITLE OF PROJECT:	A Pilot Project to Develop, Initiate and Evaluate a Post-Secondary Program in Oceanic and Marine Technology
APPLICANT ORGANIZATION:	Brazosport College 500 College Drive Lake Jackson, Texas 77566
PROPOSAL DEVELOPED BY:	E. D. Middleton, Jr., Director Oceanic and Marine Technology (713) 265-6131
DIVISION DIRECTOR:	Truman T. Isbell, Director Technical-Vocational Studies (713) 265-6131
PROPOSAL SUBMITTED BY:	J. R. Jackson, President Brazosport College (713) 265-6131
CONTRACTING OFFICER:	Jack Maris, Business Manager Brazosport College (713) 265-6131
DURATION OF PROJECT:	September 1, 1971- June 30, 1972

OCEANIC AND MARINE TECHNOLOGY

First Year
(Certificate Program or First Year of Degree Program)

First Semester

Course Number	Description	Credit	Hours Lect.	Lab.
Ocean. 102	Oceanograpny I	2	2	0
Ocean. 104	Seamanship I	4	2	4
Ocean. 124	Navigation I	4	2	4
Ocean. 103	Oceanic and Marine Tech I	3	2	2
Ocean. 123	Marine Engineering Tech I	3	2	3

Second Semester

Ocean. 114	Seamanship II	4	2	4
Ocean. 134	Navigation II	4	2	4
Ocean. 113	Oceanic and Marine Tech II	3	0	6
or				
Ocean. 133	Marine Industrial Applications			
Elect. 133	Marine Electronics	3	2	3
Math. 173	Technical Math I	3	3	0

Summer Semester

Ocean. 106 Oceanic and Marine Tech III (240 Contact Hours; 6 Cr. Hrs.)
(6 week commercial-industrial practicum)

At the completion of the first year, student is eligible for a certificate and qualified for immediate employment in industry; he will also have prepared for U.S. Coast Guard examinations; continuation in the program for the second year will lead to an Associate of Applied Science Degree; the summer semester is encouraged for certificate program students and required in the degree program.

Note: Athletic program to be integrated.

Second Year

(Degree Program)

First Semester

Course Number	Description	Credit	Hours Lect.	Lab.
Ocean. 202	Oceanography II	2	2	0
Ocean. 203	Seamanship III	3	1	4
Bus. 113	Business Communication	3	3	0
Bus. 246	Marine Economics	3	3	0

Phy. 204	Technical Physics I	4	3	3

Second Semester

Ocean. 213	Seamanship IV	3	2	2
Ocean. 223	Marine Engineering Tech II	3	2	3
Ocean. 244	Oceanic and Marine Tech IV	4	3	3
or				
Ocean. 254	Marine Industrial Applications II			
Phy. 214	Technical Physics II	4	3	3
Ocean. 263	Marine Resources	3	3	0

OCEANIC AND MARINE TECHNOLOGY

Course Descriptions

Ocean. 102, 202	OCEANOGRAPHY I, II - An introduction to Oceanography, with emphasis on practical implications of ocean science; course will be oriented toward practical aspects of Oceanic and Marine Technology (2-0) (2-0)
Ocean. 124, 134	Navigation I, II - The mariners' compass, aids to navigation, government publications, the nautical chart, piloting -- dead reckoning, tides and currents, position determination, electronic and celestial navigation. (2-4) (2-4)
Ocean. 104, 114, 203, 213	SEAMANSHIP I, II, III, IV - Basic shipboard familiarization and terminology, definitions, safety precautions, personal conduct, emergency drills and procedures. Philosophy of seamanship, dress, objectives, marlinspike seamanship, vessels, ship handling, rules of the road, meteorology, first aid, deck gear duties of able seamen and life-boat men. (2-4) (2-4) (1-4) (2-2)
Ocean. 123, 223	OCEANIC AND MARINE ENGINEERING TECHNOLOGY I, II - Marine power plants and machinery; internal combustion engine, diesel engine operation, maintenance, testing, timing and overhaul. Basic principles of diesel designs in common use, including fuel systems, combustion chambers, piston and linear assemblies, shafting, cooling and lubrication systems; hydraulics; pumps and auxiliaries. (2-3) (2-3)
Ocean. 103	OCEANIC AND MARINE TECH I - A survey of career opportunities available in ocean and marine enterprises and industry; an introduction to ocean and marine resources and a consideration of the scientific and technical skills required in efficient and gainful use and management of these resources. (2-2)
Ocean. 122, 254	MARINE INDUSTRIAL APPLICATIONS I, II (Industrial support, hazardous cargo) - An introduction to commercial and industrial needs in the realm of marine technology. Intra-coastal and inland waters; off-shore mineral and oil operational supports; handling and storage of hazardous cargo; vessel, port and plant security; petro-chemical cargo handling and storage; considerations pertaining to solid, liquid and gaseous cargo; fire fighting and damage control; operation of dry and wet cargo vessels. (0-6) (3-3)
Ocean. 113, 244	OCEANIC AND MARINE TECH II, IV - Introduction to commercial fisheries, Fishing gear, to include detailed study of bottom and mid-water trawls and other dragging gear. Detailed study of the purse seine, gill net, trap and longline. Emphasis on the construction, repair and use of the various designs and arrangements of each; a consideration of other fishing methods. Fish technology related to preservation and processing of fish catch afloat and ashore; plant sanitation and quality control Refrigeration, storage. (3-3) (0-6)

Ocean. 106	OCEANIC AND MARINE TECHNOLOGY III (Industrial Training Period) - During the Summer session following the first year and preceding the second year of the program, students participate in a supervised program of industrial application. Six weeks (full time) required aboard commercial vessels participating in the program. Complete records of the vessels and their equipment, a daily log maintained by the students and reports from the captains will measure student performance. A definite schedule of assignments will be completed by students during this period.
Ocean. 263	MARINE RESOURCES - A survey of the potentials of national and world-wide marine resources, to include fisheries, petro-chemical and mari-cultural.(3-0)
Bus. 113	BUSINESS COMMUNICATION - This course deals with effective communications in business, spelling paragraphing, planning. (3-0)
Bus. 246	MARINE ECONOMICS (Directed toward practical marine applications) Development and application of economic theory underlying the production, distribution and exchange of goods and services. Utilization of resources, production, determination of value and prices, monetary and banking theory, national income anaylsis stabilization. (3-0)
Elect. 133	FUNDAMENTALS OF MARINE ELECTRONICS - Ships wiring, communications, depth and fish finders, radar, sonar, loran, decca, RDF, noise control, siting, maintenance and repair.(2-2)
Math. 173	TECHNICAL MATHEMATICS I - Fundamentals of algebraic operations, properties of the set of real numbers, functions and graphs and systems of linear equations. The applications of these principles to practical marine technology is stressed.(3-0)
Math. 183	TECHNICAL MATHEMATICS II - A continuation of Math. 173. More advanced algebra and logarithms, curve sketching and non-linear empirical equations. Numerical trigonometry of the right triangle. Application of these concepts to practical marine situations is stressed. (3-0)
Phy. 204	TECHNICAL PHYSICS I (Work, Energy, & Power) - Instruction includes such topics as statics, forces, center of gravity and dynamics. Units of measurements and their applications are a vital part of this course. Emphasis will be on practical marine applications. (3-3)
Phy. 214	TECHNICAL PHYSICS II (Electricity, Fluids, & Air) - A study of the applications of fluids and air. Also included are basic theories of electricity, methods of production and transmission and transforming of electricity. Applications of these concepts to practical marine situations are stressed. (3-3)

BRAZOSPORT COLLEGE
OCEANIC AND MARINE TECHNOLOGY

Course Outline

OCEANOGRAPHY

First Semester

Oceanography and the Mariner

Treasure from the Sea

Biological Oceanography

Dangerous Sea Life

The Titanic -- 50 Years Later

Natural Phenomena

Underwater Disturbances

Peru Current

Water Density and its Applications

The Gulf Stream

Second Semester

Geological Oceanography

Ocean Waves

Survival at Sea

Navigational Hints

Fisheries Vessels and Gear

Ships - of - Opportunity

Ocean Station Vessels

The Distribution of Discolored Water

Ocean Cables and Deep-Sea Trawlers

Collisions -- 1969

SEAMANSHIP

First Semester

Safety: Emergency Drills
- First Aid and Medical Aspects, Resuscitation

Definitions; Nautical Terminology; Vessel Nomenclature

The Vessel
- Classification
- Vessel Construction
- Damage Control and Hull Preservation
- Aids to Navigation; Buoyage, Lights, Day Markers, Ranges

Rules of the Road
- Principles and Applications
- Basic Rules, Inland and Ocean Waters
- Lights and Shapes of Identification
- Fog Signals, Rules
- Steering and Sailing Rules
- Passing Signals, Etc.

Swimming, Water Safety, Life Saving

Rope and Cordage

Knotting and Splicing

Vessel Handling (Single, Twin, Multiple Propeller)
- Propulsion and Steering
- Navigation
- Ships Boats and Fishing Craft

Shipboard Cooking; Supply and Storage

Second Semester

Communications
SCUBA (BASIC)
Ground Tackle, Anchoring and Mooring
Shiphandling
- General Principles of Ship Control
- Docking and Mooring
- Towing and Salvage
- Boat Handling and Helicopter Operations
- Ice Seamanship

Weather
- Oceanography
- Atmosphere and its Circulation
- Clouds, Thunderstorms, Stability and Fog
- Weather Elements, Instruments, and Reports
- Weather of the Middle Latitudes
- The Tropical Cyclone
- Sail and Sailing
- Fire Fighting and Damage Control
- Mechanical Weight Lifting; Appliances aboard ship; deck machinery

NAVIGATION

First Semester

Introduction to Navigation
The Earth and Its Coordinates
Chart Projections and Chart Interpretation
Navigational Publications
The Sailings
Aids to Navigation
Dead Reckoning and Current Sailing
Currents and Tides
Compasses
The Navigator's Instruments
Elements of Piloting
Tactical Characteristics in Piloting
Graphic Solution for Relative Motion Problems
The Piloting Team
The Practice of Piloting
Radar Navigation
Electronics
Basic Electronic Navigation Systems
Navigational Astronomy
Introduction to Celestial Navigation
Identification of Celestial Bodies
The Marine Sextant: Its use, Adjustment, and Corrections
Time
Almanacs

Second Semester

Sight Reduction
Celestial Lines of Position
The Complete Celestial Solution
Celestial Navigation: Special Cases and Phenomena
Compass Error at Sea
The Practice of Navigation at Sea
Omega Navigation System
Loran C and D
Electronic Systems for Hydrographic Surveying
Radio Astronomy for Navigation
Doppler Navigation
Inertial Navigation
Satellite Navigation
Advanced Celestial Observing Instruments
Navigational Computers
Lifeboat Navigation
Bethymetric Navigation
Polar Navigation
Optimum Track Ship Routing
Air Navigation
Space Navigation
Abbreviations and Symbols - Metric Conversion Table
Nautical Chart Symbols and Abbreviations

ENGINEERING

First Semester

What a Diesel Engine is

Distinguishing Features of Diesel Engines

Basic Construction of a Diesel Engine

Basic Terms of Physics and Engineering

Heat and Combustion

Oil and Gaseous Fuels

Engine Power and Fuel Consumption

Engine Rating and Performance

Engine Types

Sationary Parts - Frames, Cylinders, and Heads

Major Moving Parts

Valve Gear, Scavenging, and Supercharging

Injecting Fuel

Burning the Fuel

Lubricating the Diesel

Governing

Typical Diesel Engines

High Compression Gas-Burning Engines

Auxillary Systems

Operation and Maintenance

ELECTRONICS

What is electricity?

Fundamental concepts of electricity

Electrochemistry

Batteries

Electrical Units and Ohm's Law

Direct current series and parallel circuits

Electrical conductors and wiring techniques

Electromagnetism and magnetic circuits

Introduction to alternating - current electricity

Basic electrical indicating instruments

Generators and transformers alternating current

Alternating - current motors

Direct current generators

Direct current motors

BRAZOSPORT COLLEGE
OCEANIC AND MARINE TECHNOLOGY
CLASSROOM AND LABORATORY SCHEDULES
1971-72

FIRST SEMESTER:

The class of 34 men was sub-divided into Shore Laboratory Group Nos. 1 and 2; lab groups were further sub-divided, i.e. Shore Lab Group No. 1 into ship lab groups ALPHA (A) and BRAVO (B), Shore Lab Group No. 2 into Ship Lab Groups CHARLIE (C) and DELTA (D). A 65 foot vessel was used in ship lab operations.

DAY	SEA-GOING TIME	CLASS GROUPS
Monday	0600-1200	Ship Group A at Sea
	1200-1800	Ship Group B at Sea
	0800-1200	Shore Group 2 in lab (main campus)
Tuesday	0800-0900	Oceanography, all students (classroom)
	0900-1000	Seamanship; all students (classroom)
	1000-1100	Navigation; all students (classroom)
	1100-1200	Oceanic and Marine Technology; all students (classroom)
Wednesday	0600-1200	Ship Group C at Sea
	1200-1800	Ship Group D at Sea
	0800-1200	Ship Group 1 in lab (main campus)
Thursday	0800-0900	Oceanography; all students (classroom)
	0900-1000	Seamanship; all students (classroom)
	1000-1100	Navigation; all students (classroom)
	1100-1200	Oceanic and Marine Technology (classroom)
Friday	0800-1000	Marine Engineering; all students (classroom)
	1000-1200	Engineering Lab; Shore Group 2
	1200-1400	Engineering Lab; Shore Group 1 (engineering lab)

SECOND SEMESTER

A 130 foot training vessel was used in addition to the 65 foot vessel on Tuesdays and Thursdays from 6:00 a.m. to 6:00 p.m. (weather permitting). The fisheries technology lab was held on Tuesdays and Thursdays from 9:00 to 11:00 a.m. and 2:00 to 4:00 p.m. The groups were assigned to the labs as follows:

DAY	SEA-GOING TIME	CLASS GROUPS
Monday	0800-1000	Seamanship II; all students (classroom)
	1000-1100	Marine Technology II; all students (classroom)
	1100-1200	Technical Math I; all students (classroom)
Tuesday	0600-1800	Ship Groups A and B at sea; 130 foot vessel
	0600-1200	Ship Group C at sea; 65 foot vessel
	1200-1800	Ship Group D at sea; 65 foot vessel
	0900-1100	Group D in fisheries technology lab (main campus)
	1400-1600	Group C in fisheries technology lab (main campus)
Wednesday	0800-1000	Navigation II; all students (classroom)
	1000-1100	Marine Technology II; all students (classroom)
	1100-1200	Technical Math I; all students (classroom)
Thursday	0600-1800	Ship Groups C and D at sea 130 foot vessel
	0600-1200	Ship Group A at sea 65 foot vessel
	1200-1800	Ship Group B at sea 65 foot vessel
	0900-1100	Group B in fisheries technology lab (main campus)
	1400-1600	Group A in fisheries technology lab (main campus)
Friday	0800-1100	Marine Electronics; all students (classroom)
	1100-1300	Marine Electronics lab, all students (classroom)

BRAZOSPORT COLLEGE
OCEANIC AND MARINE TECHNOLOGY
TEXTBOOKS 1971-72

BOOK	COURSE
NAVIGATION AND PILOTING by Dutton	Navigation I (Ocean. 124) Navigation II (Ocean. 134)
SCIENCE AND THE SEA, VOL. I by Barther	Oceanography I (Ocean. 102)
SCIENCE AND THE SEA, VOL. II by Van de Ree	Oceanography I (Ocean. 102)
PILOTING, SEAMANSHIP AND SMALL BOAT HANDLING by Chapman	Seamanship I (Ocean. 104) Seamanship II (Ocean. 114)
DIESEL AND HIGH COMPRESSION GAS ENGINES by Kates	Marine Engineering Tech. I (Ocean. 123)
BASIC REFRIGERATION by King	Marine Electronics (Elect. 133)
ARITHMETIC: A MODERN APPROACH by Keedy-Bittinger	Technical Mathematics (Math. 173)

EXPERIENCES AND TEACHING OBJECTIVES IN VESSEL OPERATIONS:

THE BASIS OF OCEANIC AND MARINE TECHNOLOGY

1. Deck Hand: The student will maintain the vessel through ship house-keeping procedures of scraping and removal of corrosive surfaces, primer touch up and painting, general cleaning and preserving; specific actions will include sweeping, wiping, washing-down, scraping, sanding, buffing, touch-up, priming and painting. The student will handle and manipulate mooring ropes and lines, handle and manipulate cables, operate deck machinery, handle anchors, operate fire-fighting equipment, operate life rafts and related life-saving equipment, operate all safety and emergency equipment with which he has concern.

Fueling Ship

2. Student Mate: The student will keep the deck log books, handle the steering of the ship, monitor and coordinate communications devices such as blinker, flags, radio and pyro-technics; he will assist the student Captain in the execution of the Captain duties at sea and in port.

At the Helm

3. Student Engineer: The student will keep all engineering log books, perform pre-operation and post-operation checks on main engines and auxiliaries; be responsible for cleanliness and maintenance of all engineering spaces and equipment aboard the ship. Engine check will include lubricant oil level checks, electrical checks, battery checks, fuel and water level checks and related items.

Diesel Engineering Laboratory

4. Additional Experiences: Each student will be provided experiences with the objective of making it possible for him to: (1) conduct emergency drills aboard the ship, such as fire drill, man over-board drill, collision drill and abandon ship drill, (2) dock and undock vessel, (3) navigation of a ship, and (4) become proficient in the use of binoculars, LORAN sets, radio equipment, depth finders, radio direction finders, RADAR, etc.

LORAN Reading

Fisheries Technology Class

GUEST SPEAKERS 1971-72

In order to familiarize the students with current opportunities in the marine industry, guest speakers were invited to lecture to the class throughout the fall semester. The following is a list of guest speakers from various industries who lectured to the department.

SPEAKER	COMPANY	SUBJECT
Mr. Dan Crissman Mr. Cliff Phillips Mr. Zane Baker	Western Geo-physical Houston, Texas	"Oil and Mineral Exploration
Mr. Houston Childers	Commercial Diving School Houston, Texas	"Salvage Operations"
Dr. Dorthea Mangum	Angleton High School Angleton, Texas	"Marine Biology"
Captain Ed Wilcox	Navigation Associates Houston, Texas	"U.S. Maritime Service"
Captain Philbrick	Texas Maritime Academy Galveston, Texas	"Texas Maritime Academy"
Mr. W. R. Rochell	Brown & Root Company Houston, Texas	"Marine Pipelines"
Mr. Jerry Mahoney	Baker-Lyman Houston, Texas	"Magnetic Compasses"
Mr. Ron Anderson	Brown & Associates Houston, Texas	"Maps, Charts, and Treasure Hunting"
Dr. John Wilson	Dow Chemical Company Freeport, Texas	"Oceanography"
Dr. H. G. Love	Marine Bio-medical Institute Galveston, Texas	"Marine Injuries"
Dr. Ed Beckman	Marine Bio-medical Institute Galveston, Texas	"Hyperbaric Medicine"
Mr. Denny Bowman Dr. Bob Feinstein	Marine Bio-medical Institute Galveston, Texas	"Oceanography of the Galapogos Islands"
Dr. Wendell Pierce	Dentist Houston, Texas	"Sunken Vessel Diving"

During the second semester, students were given the opportunity to be on actual industrial vessels and receive "hands on" experience. Consequently, by having the opportunity to hear guest speakers from various marine fields the first semester, and by having the opportunity to work with actual industrial vessels, Oceanic and Marine Technology students could better make decisions toward future career patterns and choices.

PROSPECTIVE EMPLOYERS OF OCEANIC AND MARINE TECHNOLOGY STUDENTS

Several marine industries have indicated a strong interest in employing Oceanic and Marine Technology students for summer work. The following marine career fields are represented by prospective student employers for Oceanic and Marine Technology students.

Off-shore Oil and Mineral	Dearborn Marine Service Incorporation Freeport, Texas
Ocean Exploration (Seismic)	Western Geo-physical Company Galveston, Texas
Oceanography	Texas A&M University, Department of Civil Engineering College Station, Texas
Oceanography	Dow Chemical Company, Texas Division Freeport, Texas
Tug boat, Tug boat barge Operations (Inland waterways)	Brown and Root Company, Jackson Marine Houston, Texas
Fisheries	Western Seafoods Company Freeport, Texas
Fisheries	Sea Hoss Marine Enterprises Freeport, Texas
Charter Boats	Muchowich Party Boats Freeport, Texas
Charter Boats	Freeport Party Boats Freeport, Texas
Marine Shore Support	Bridge Harbor Marina Freeport, Texas
Diving and Salvage	Yokley Enterprises Houston, Texas
Ocean Engineering	Horvitz Laboratories Houston, Texas

RE: Summer Industrial Practicum

Oceanic and Marine Technology students at Brazosport College are employed with the following marine industries during the Summer Industrial Practicum:

Student	Address	Industry
Ray Arceneaux	Rt. 2, Box 317, Brazoria	Shrimp Boat DREADNAUGHT, Gulf
Robert Bieber	1431 Kingstree, Houston	USCG, Active Duty, California
John Blomshield	716 Northridge, Angleton	Dearborn Marine, Gulf
Robert Clemens	5432 Briar, Houston	Jackson Marine, Brown & Root Gulf
Jack Danford	213 Van Winkle, Lake Jackson	Western Geo-physical, Galveston
William David	1902 W. 8th, Freeport	Dearborn, TELEDEX IV, Virginia, Connecticut, North Atlantic
Steve Deal	1810 Westshire, Houston	Charter Boat, MISS CHERI, Muchowich Party Boats
Brad Gable	338 Doddridge, Corpus Christi	Charter Boat, Muchowich Party Boats
Mike Guthrie	707 N. Ave. F, Freeport	Dearborn Marine, CAPTAIN CARL
John Hall	3417 Montrose, Houston	Horvitz Laboratories, Engineer on off-shore vessel
Thomas Mayfield	302 Tanglebriar, San Antonio	Western Geo-physical, M/V WESTERN GULF, Nova Scotia
Samuel Mundorff	213 Skinner, Freeport	Shrimp Boat, PODUNK QUEEN
George McGrath	211 Laurel, Lake Jackson	Standby for Fisheries
Garrison Milbery	111 Holly, Lake Jackson	Clerk, Ship Supply Store
James Nelick	115 Terrance Rd., Lawrence, Kan.	Standby for Fisheries
Cynthia Orlea	1000 Meadow, Angleton	Standby for Fisheries (Administration)
Robert Patterson	Rt. 1, Box 42B, Brazoria	Fish & Wildlife Commission M/V SCAMP
Steve Philpot	1435 Oakstream, Houston	Dearborn Marine, M/V MISS FREEPORT
Richard Rodriguez	4130 Bluebonnet, Houston	Fish & Wildlife Commission M/V SCAMP
Harvey Spiller	Rt. 2, Freeport	Muchowich Party Boats, Charter Boat
Rick Weber	3721 Xanthus, Tulsa, Oklahoma	Captain of Charter Boat, LAURIE G
James Wheatley	2231 Partwood, Harlingen	Western Geo-physical
James Yokley	7345 Sims Dr., Houston	Yokley Enterprises, Diver

Fisheries (shrimp) season opens approximately July 1, 1972. It is anticipated that fisheries-oriented students will be employed by mid July.

Respectfully submitted,

E. D. Middleton, Director
Oceanic and Marine Technology

EDM:dl

SUMMER INDUSTRIAL PRACTICUM

The following forms are now being used by the students who are participating in the Summer Industrial Practicum. Reports are required to be submitted to the director at the end of the third week and sixth week of the term. In addition to the reports, a log of daily experiences and activities should be kept by the students and be remitted when they return from the various marine industries.

BRAZOSPORT COLLEGE
500 College Drive
Lake Jackson, Texas 77566

Dear Student:

For the purpose of accreditation, the Summer Industrial Practicum must be formalized by the use of written reports. The enclosed format will be used to report the necessary information needed for the Director.

This completed form should be mailed at the end of the first three weeks and at the end of the first six weeks of the Summer Industrial Practicum. A final report should be remitted at the termination of the Practicum. Self addressed, stamped envelopes are enclosed herewith for the purpose of prompt remittance. Any additional comments or suggestions would be helpful for future development of the Oceanic and Marine Technology program.

A personal log of daily experiences and activities will be an additional requirement to be remitted at the termination of the Practicum.

Please supply the Employer's Report to the captain or chief engineer with whom you will be working.

The attached "Experiences and Training Objectives" will be applicable to the student participating in the Practicum.

Sincerely,

E. D. Middleton, Director
Oceanic and Marine Technology

Confidential Report for Oceanic and Marine Technology Students Participating in the Summer Industrial Practicum

STUDENT:

CURRENT MAILING ADDRESS:

EMPLOYER:

IMMEDIATE SUPERVISOR:

STUDENT'S POSITION OF EMPLOYMENT

TYPE OF WORK PERFORMED:

NAME OF VESSEL (OR MARINE OPERATION) AND DESCRIPTION:

TYPE OF INSTALLATION AND DESCRIPTION:

LENGTH AND WEIGHT OF VESSEL:

HORSE POWER:

TYPE OF PROPULSION:

TYPE HULL:

PLEASE ADD ANY REMARKS WHICH YOU FEEL WOULD BE HELPFUL INFORMATION CONCERNING YOUR WORK EXPERIENCES. (DAILY SCHEDULE ETC.). ATTACH ANY PHOTOGRAPHS TO ADD TO YOUR REPORTS.

BRAZOSPORT COLLEGE
500 College Drive
Lake Jackson, Texas 77566

Dear Sir:

In order that I may know the activities and performance of work of the Oceanic and Marine Technology students participating in the Summer Industrial Practicum, please fill out the attached confidential information report.

It is requested that students participate in as many of the following activities aboard vessels as is practicable and appropriate to deck or cargo operations, engineroom work, fisheries and gear and equipment handling. The attached "Experiences and Training Objectives" should be applicable to the students.

I thank you for your cooperation.

Sincerely,

E. D. Middleton, Director
Oceanic and Marine Technology

PERFORMANCE OF WORK:

ATTITUDE:

APPEARANCE:

SAFETY

The practice of safety in the OMT classroom and laboratory has been a part of the instruction the entire year. The following safety rules have been proposed and are required to be pursued by each student.

GENERAL:

Be alert; stay aware of your surroundings at all times, on all sides, over-head and below you, assume initiative and responsibility.

Keep sparks, open flame and smoking materials away from flammable or explosive material (at least 100 ft.)

Keep all areas and all equipment clean and free of debris, dirt and/or loose objects.

Lash or tie down all loose, moveable or portable items when preparing a vessel for sea.

Wipe or mop up all spills or leaks of oil and gasoline immediately upon observation.

Be familiar with all emergency ship-board drills: fire, collision, man-overboard, abandon ship, enemy attack, nuclear attack, gas attack, storm, to include hurricane, tornado, typhoon, cyclone and water-spout.

Know your station and duties for all emergency drills or actual emergency situations. Keep calm as a first step in all emergency situations.

Operate on the "buddy system" at all times; be responsible for the where abouts and safety of at least one or two designated friends or "buddies" at all times. If he or she should become injured or missing, report this information to your nearest instructor immediately.

Know the location of all emergency equipment or gear in your area; i.e. fire hoses, fire extinguishers, fire axes, damage control equipment, life jackets, life rafts, life rings, life boats, flashlights and lanterns, hand tools, including cutting tools and pry or crow bars; first aid kits, fellow students with first aid or medical experience or skills.

Know rules for handling, stowing and moving hazardous cargo or material.

Be familiar with fire-fighting and damage control.

Be ever alert for other vessels' approach from any angle, especially from behind or astern of your vessel.

Be ever alert for "dangers from above", i.e. hooks or blocks of over-head cranes, derricks, booms or other hoisting equipment; be alert to presence of over-head weights, cargo drafts or loads; low head clearance on ladders or through hatches.

Be alert to hazards underfoot, i.e. openings in the deck, open hatches, scuttles and other accesses, projections on deck, deck cleats and fittings, open beights or loops of line, rope or chain, raised deck areas associated with doors, hatches and other access fittings, hatch and other access coamings.

Keep clear of moving parts, rods and gears, particularly with respect to your appendages, i.e. arms, legs, feet, fingers, toes and hair (short hair recommended), stay clear of engine moving gears, rods and parts; keep body inboard of rails aboard ship; do not place hands on gunwales, rail or rub-strakes of boats or ships.

Remember well (NB); "one hand for the ship, one hand for yourself", in other words: "hang on".

Wear appropriate clothing, light rain gear for rain, warm "layer-type" or laminated light clothing (insulating) for cold; avoid loose or dangling items of clothing.

When strain is being placed upon rope, line or cable in operations, be aware that a breaking or parting rope, line or cable could slice you into two parts; keep clear or protected from this possibility, stand away and behind solid objects when possible in this situation.

Keep a firm stance on decks of ships in event of heavy seas causing rolling, pitching yow, heaving and other sea-way action; wear deck shoes or other type shoes with good grip on wet or slippery decks and which can be kicked off rapidly in case you fall over-board.

Take out some form of student life insurance to protect you and your loved ones in the event of injury or death.

Do not fear, but respect the awesome power and force of the ocean sea; remember well (NB) the sea is unmercilessly unforgiving of human error; while the sea is huge and powerful, 3/4 of the globe, is nearly omnipotent, it will yield to men, women and science and can provide challenge, jobs, livelihood, education, and fun!

These safety rules, regulations and guidelines apply to the Oceanic and Marine Technology Department of Brazosport College and will be posted conspicuously on bulletin boards in classrooms, laboratory and training vessel or vessels of this Department.

Wear life jackets when operating on deck in heavy seas or stormy weather.

In the event of man (or girl) overboard: (1) Keep calm; (2) throw life ring, life jacket or other floatable, buoyant object to person immediately; if on wheel or as captain, place rudder hand over to turn vessel so that propellars will be "kicked" away from person in water (i.e. overboard starboard; designate a person or bridge to keep individual in sight; turn to pick up individual in water. Use line, boat hooks and man-power to rescue.

When involved or participating in special training operations, such as diving, fire fighting, swimming, fisheries operations and similar specialized training activities, observe strictly safety rules and regulations pertaining to these specialized activities.

If you have questions concerning these safety rules and regulations, contact your instructor immediately.

Safety Rules and Procedures - continued

It is impossible to formulate and publish safety rules and regulations to cover all possible danger, or emergencies -- therefore: stay alert, keep cool and take advantage of all learning opportunities.

Feel free to communicate with your instructors and with the Director, Oceanic and Marine Technology program at all times, 24 hours per day.

BRAZOSPORT COLLEGE
OCEANIC AND MARINE TECHNOLOGY
SAFETY

Studies of accident cases on board ships over a long period of years reveals that most accidents (around 95%) were preventable.

Also the record shows that most accidents were caused by failure of the human element-failure not only of the individuals who were injured but also on the part of those charged with the responsibility of supervising them. Only a small percentage were really caused by some type of mechanical failure.

It is clear, therefore, that the human factor must be emphasized as the controlling element in all accident prevention on board all vessels. It governs in the promotion of safety work, in its development, execution and in the success or failure of every safety program. Many of the primary causes of accidents on board vessels may be classified as follows:

1. Faulty or inadequate supervision
2. Unsafe equipment or materials
3. Unsafe conditions
4. Personal action or characteristics of accident victim
5. Improper safety planning

Prevent accidents by: Instruction, inspection, and supervision

It is always urged by companies that their officers familiarize themselves with the entire contents of safety in order to have a comprehensive grasp of all the safety problems on board a ship. A little or limited safety knowledge may be worse than none at all.

The subjects discussed in this paper are some of those which are sufficiently broad in their nature and scope as to cover all sizes of vessels and more than one department on a ship.

BELTS, SAFETY

Safety belts, also known as rigging belts, should be worn by all men. working aloft, over the side, on stagings or in places involving possible falls. Safety belts are now standard equipment but still are not used on board ship nearly as much as they should be. When men are working over the side, a safety belt will prevent a possible drowning accident. Make certain that there is never too much slack in the line. When men are working in tanks or other spaces where they may be subject to asphxiation, a safety belt with harness and lanyard should be worn so that the man can be lifted out vertically if he collapses. Lanyards should be kept reasonably taut in order to prevent a man from falling and bringing up with a heavy jerk. Safety belts and lifelines should be carefully inspected before each is used. They should be snugly fitted and the strap securely buckled.

BIGHTS

Men should always stand clear of bights when running lines and when placing lines on the bitts. Instruct and supervise men in standing clear of bights at all times, especially green men.

RADAR

When men are working aloft on the radar, the following precautions should be observed:

1. Do not perform such work while the ship is underway
2. Use the boson chair with the proper rigging on work done on the mast and ladder instead of hooking on to the ladder rung.
3. Inspect all gear before using.
4 Notify the Chief Engineer before the men go aloft

SHACKLE

All shackles and gear should be examined before each cargo operation or when used by the crew when working. Shackles with screws may be a hazard due to pins working loose, unless well seized with wire. It is strongly recommended for safety that shackles used in connection with blocks on cargo falls, guys and boom topping lifts should be of a safety type with lock nuts and pins. When using a shackle during rigging of a boson chair never allow the pin to ride on the stay, it may cause the pin to unscrew.

WINCHES

Serious injuries have occurred to men trying to oil deck winches while in operation and through failing to notify the winch operator to secure and take his hand off the throttle, before oiling the winch. When winches are equipped with locking pins, they should be used to prevent the winch from turning over by accident.

DRILLS: FIRE AND EMERGENCY

The quick and safe execution of all drills on board ship is of great importance. The Master should make a safety study of the conduct of drills. He should note and correct any unsafe practices. When using portable fire extinguishers, men should be cautioned to stand upwind to prevent chemicals from being sprayed or blown into their eyes. Observe how men working when launching lifeboats in order to prevent anyone from slipping, falling or being pushed overboard. See that the men wear their jackets during these drills. Drills should not only test equipment, but should also instruct, train and test the crew in their knowledge and use of all safety equipment.

GOGGLES

Safety goggles should be provided at appropriate locations for the safe protection of eyesight. See that the goggles are worn over the eyes not over the forehead.

HAND PROTECTION

Gloves of suitable material should be worn to protect hands against possible injury when handling materials such as acids, caustics, wire, etc. Never use gloves when working with moving machinery or when climbing ladders.

BITTS

Make lines fast to bitts not to capstans or gypsy heads.

BLOCK AND TACKLE

Always inspect blocks and tackle before using them. Also inspect pad eyes, rings and other fittings to which this gear is to be made fast. Over estimate possible strains rather than under estimate them. Use block and tackle to lift heavy gear. This prevents hernias, crushed arms, hands, and backs. Beware of heat, oil and acid burns on rope. Always inspect rope before using, you may save lives by doing so.

BOATSWAIN'S CHAIR

The chair should be rigged under officer supervision by the men who will use them. It is very important that each man using the chair know how to rig it and make the necessary hitch for lowering themselves. Do not trust green men to know how to make hitches and rig gear. Makeshift rigs, like the use of "meathooks", are almost certain death traps. In general, a man should never hook or shackle his Boson chair to a rung of a ladder or handrail. Not only may the rung be in a weakened condition and carry away, but the frequent changing from one rung to another has proven to be very hazardous. Use a tailblock with gantline and let the man lower himself. When slushing the rigging, do not permit the shackle pin to ride on the stay. A safety belt, secured to the tackle, should be provided to prevent a man from falling out of the chair. Lifelines must not be too slack. Study the situation and then act for safe performance of the work.

HOOKS

All open hooks should be moused for safety. Discard hooks that have opened up. Use shackles, instead of open hooks, if practicable.

MOORING LINES

Equip mooring lines with beckets for use as hand gripes on the eyes of ropes and wires. This will prevent fingers from getting jammed when placing mooring lines on bollards and bitts, also in letting go lines. Take sufficient turns with mooring lines around gypsyheads to hold the strain and prevent slipping. Have the men who are handling the lines to stand in a safe position, clear of all bights. Always make mooring lines fast to bitts, not gypsyheads. When loading or discharging alongside a dock, attend mooring lines frequently for tautness or slackness, particularly when passing ships approach you.

PAINTING

When painting ship, observe safe practices for overside operations. When painting aloft see that all gear, gantlines, boatswain's chair, etc., are in good condition, well rigged and properly secured. The preferable way to paint a mast ladder is to use a tailblock with a gantline, boatswain chair and let the man lower himself. However, it is very important that each man using the boson's chair should know how to rig and make the necessary hitch for lowering himself under proper supervision. When painting closed areas, make certain there is sufficient ventilation. When spray painting, use respirators and goggles if practible.

HANDRAILS

Rig a temporary rope or chain guard rail when hand rails have been removed for any purpose, in order to prevent slipping and falling accidents. Keep rope or chain rails taut. Oily, slippery rails are hazards; keep them clean.

ILLUMINATION

Adequate illumination should be provided at all times, especially at gangways, in work areas, on deck and over the side when working cargo at night. Inspect all portable lighting equipment for defects before using. Insure that the insulation is not broken. Lighting cable should be rigged so as to avoid tripping and falling hazards.

INEXPERIENCED MEN

The first safety rule of all is that responsible heads of departments on board vessels should prepare themselves thoroughly in the basic principles of safety work and then should take upon themselves the responsibility for instructing their men. Constant training of green men is necessary for safety and efficiency. Otherwise accidents which might have been prevented by proper safety instruction and supervision will occur invariably.

INSPECTION

It is fundamental that all gear and equipment should be inspected before using. It is fundamental for safety that there should be frequent inspection of cargo spaces, living quarters, etc., for the purpose of accident and fire prevention.

INDIVIDUAL SAFETY PROTECTION

The highest moral obligation rests on all hands on board ship to prevent personal injuries to fellow men. The leading cause of accidents is failure to the human element - man failure. A well trained crew is a great safeguard against accidents, "if you take an interest in your men, they will take an interest in you." When men are working dangerous positions such as aloft or over the side, supervise for safety. Take an interest in their safety.

ROPE

Inspect rope for defects such as burns, kinks, abrasions, wear, etc., before using them. Inspect and test rope used for stagings, boson chairs before using them. You may save lives by this safe practice.

SPLICING

When splicing wire or rope the spike point should always be away from the body not toward.

DECKS

The prevention of tripping, slipping and falling accidents on deck requires a combination of safety education and a stimulation of mental alertness among personnel. It is sometimes helpful to use white aluminum or luminescent paint on deck objects in order to catch the eye of those not on the alert. Safety "color coding" also provided helps to cut down on accidents, along with signs painted in the danger area. When expecting heavy seas, rig suitably lifelines fore and aft on the lee side. If the ship is swinging around to any extent, rig lifelines on both sides of the ship with instructions to use the lee side. When shipping "green sea" on deck warn all hands and rope off the dangerous areas if practicible. In emergencies, if men must go out on deck adjust course and speed clear in the vicinity of hold ladders. Suitable guards should be placed near all open manholes or other openings in the deck, to prevent falling accidents.

Deck cargo should be well stowed and properly secured. It should be provided with safe walkways having double lifelines and walkways should be illuminated at night. Ample headroom should be provided at the ends of the deck cargo adjacent to the house in order to prevent head injuries.

FACTORS OF SAFETY

Each Master and Mate should study the factors of safety involved in each operation. The factors of safety apply to practically every type of operations on board ship, rope, wires, slings, stagings, etc., strong enough to stand the weight to which it is to be subjected.

OILY RAGS OR WASTE

Spontaneous combustion may be caused by oily rags or waste. For safety, provide metal containers for the disposal of oil material such as waste, paint rags, etc., and empty the containers daily.

The conservation of human life by preventing personal injuries should be a seaman's greatest efforts and objectives. Each Master. Officer and man on board ship has personal responsibility for safety, not only of the ship, but his shipmates, as well.

SAFETY MEETINGS WITH UNLICENSED PERSONNEL

All hands should be invited and encouraged to attend these meetings. The larger the turn out, the more effective will be the results and the greater the interest in safety which will be developed among the crew.

The agenda for these meetings should be parallel to that of the program set up by the Staff Safety Committee. It should include studies of specific jobs to develop safe practices; discussion of shipboard safety and items in publications or correspondence, in matters over which the men have control.

Approximately half of each meeting should be devoted to instruction and training in the use of items of safety gear and equipment on board, such as the oxygen breathing apparatus, first aid, all purpose nozzles, etc. Also such topics as individual behavior, what to do on the discovery of fire, man overboard, shock, etc., should be stressed during this half of the meeting. The high point should be on the stimulation of safety consciousness by all hands.

These meetings with the unlicensed crew are an essential part of a complete safety program on board ship. To get the best results out of them, the officers in charge of them must plan the meeting in advance, very carefully. They will often find such meetings a challenge to the capacity for leadership and handling men, in order to conduct a discussion which will be profitable and not one that will go off the bean into extraneous matters.

The scope of the meeting's activities should be made clear from the beginning. There should be no doubt but that safe practice recommendations not discussion are in order.

ACCIDENT INVESTIGATION

This is a very important part of every well balanced safety program. Its purpose is to discover the cause of the accident, the unsafe condition or unsafe practice that brought about the accident, so that proper action may be taken to prevent recurrence.

An accident should be considered as an indication of some weakness in the prevention program and a close study of all conditions and actions surrounding and leading up to the accident should disclose specifically what those weaknesses are. This will help the officer in recognizing potential accidents which they may have overlooked.

The purpose of the report is not to fix a blame. If the men get the idea that this is the case the men will withhold facts. On the other hand it is the responsibility of the Master and his officers to ascertain all the relevant true facts and to protect the ship against possible false and fraudulant claims. Beware of what is called the "sea lawyer."

PROJECT CONCEPT

The research project envisioned utilization of sea-going vessel, boat or ship as a floating laboratory in the training of students in the development of skills related to the operation, maintenance and repair of vessels of the off-shore industrial support (oil and mineral) category, fisheries vessels, intra-coastal and inland waterways, tug boats and tow boats, fire, yacht, salvage, research, exploration and port security type vessels.

This concept of the "floating laboratory" envisioned employment of a vessel (boat) as the principal training aid associated with the given program.

Principal teaching subjects are projected as follows: Navigation, including piloting, celestial and electronics, seamanship, diesel engines, emergency procedures, vessel house-keeping and other supporting marine subject areas. Complementing the vessel or on-board training phase, the land-side classroom and laboratory work will give the graduating student a salable combination of both practical, "hands-on" experience and formal, classroom educational skills.

ABSTRACT

TITLE OF PROJECT: A Pilot Project to Develop, Initiate and Evaluate a Post-Secondary Program in Oceanic and Marine Technology

APPLICANT ORGANIZATION: Brazosport College
500 College Drive
Lake Jackson, Texas 77566

PROJECT DIRECTOR: E. D. Middleton, Jr., Coordinator
Oceanic and Marine Technology

DURATION OF PROJECT: September 1, 1971 to June 30, 1972

PROJECT OBJECTIVES

The research project envisioned utilization of sea-going vessels (boat or ship) as floating laboratories in the training of students toward the development of skills related to the operation, maintenance and light repair of vessels of the off-shore industrial support (oil and mineral) category, fisheries vessels, intra-coastal and inland waterways, tug and tow boat, yacht, salvage, rescue, oceanographic exploration and research, and port security and patrol-type craft. The project embraced feasibility study or pilot activity to develop, initiate and evaluate a post-secondary program in Oceanic and Marine Technology.

PROCEDURES - METHODS

An average number of thirty-two students were enrolled in the Oceanic and Marine Technology program at Brazosport College studying technical, vessel operating skills in a classroom situation, augmented by guest lecture programs, field trips and multi-media techniques. Subject areas included seamanship, navigation, boat-handling, oceanography, diesel engines, ship maintenance, marine electronics, emergency drills and other marine related subject materials. Several training vessels served as floating laboratories for actual practice and implementation of classroom presentations.

UTILIZATION OF PROCEEDINGS

The utilization of the results of the project will be the projection of plans for the future development of the Oceanic and Marine Technology program. The preparation of this final report will describe the project and separate guidelines will be prepared for the implementation of this kind of program in other institutions.

RESEARCH PROJECT

TITLE: A PILOT PROJECT TO DEVELOP, INITIATE AND EVALUATE A POST-SECONDARY PROGRAM IN OCEANIC AND MARINE TECHNOLOGY

PROBLEM AND OBJECTIVES: The problem area of a need for a marine-oriented technology training program was established through various techniques of research and investigation. The findings of an independently operating consultant, from local marine industrial agencies and the intensive contact-development during the start-up phases of the over-all program have all accentuated the pressing need for qualified vessel operators to the 1,000 ton and 10,000 horse-power diesel size category. Additional research and review of available literature and professional publications reinforces the concept of existing need for skilled man-power in the marine technician brackets. In summary, the problem: A need for operators of vessels up to 1,000 tons and 10,000 horse-power, who have specific skills and competence in Oceanic and Marine Technology.

DESCRIPTION OF ACTIVITIES (PROCEDURES - METHODS): The over-all procedures for the implementation of the program were very heavily oriented toward practical, or "hands-on," experiental type teaching techniques. Technical training was conducted aboard a vessel and on the land area under a laboratory concept. The land area training served as the complement to the water, on-board training. It is contemplated that mock-up vessel layouts or "land-ships" will be utilized during future shore phases. The laboratory periods alternated with classroom periods and the entire program consisted of integrated practical work and formal class work procedure. Students aboard the training vessels rotated through the various, key duty assignments during this phase of laboratory training. At various times the students experienced technical, "hands-on" training - captain, helmsman, engineer, navigator and deck hand.

In considering the "procedures-methods" aspects of the Oceanic and Marine Technology Program, the following general conceptual categories are elsewhere treated upon in this report, namely: Program Objectives, Program Background, Basic Problem of Address, General Concept of Program and various aspects of procedural methodology.

Although general procedural-methods have been elsewhere considered, it is relevant that this particular conceptual area be further analyzed.

With this analysis in mind, the following aspects of development in this area may be iterated: (1) Student Recruitment or Procurement; this particular "aspect area" entails presentation of program objectives to the prospective student, counseling toward career objectives on an individual basis, housing location assistance if indicated as desirable, job-finding assistance, as required, and general individual attention to the student from faculty persons.

Further aspects of program development have and will include program curriculum development, formulization of course syllabi and lesson plans and general integration of formal effort toward actual contact hour presentation; textbook analysis and selection; instructor reference text analysis and selection; selection of competent and enthusiastic instructors, both on a part-time and a full-time basis, contingent upon student enrollments; equipment of all categories in the marine enviromental concept, such equipment to be leased, loaned, donated or purchased.

Within the realm of equipment requirements, are those items necessary for the effective teaching of subject areas outlined previously; i.e. Oceanography, Navigation, Seamanship, Marine Technology and Marine Engineering. Further considerations involved in procedure-methods categories involve audio-visual

materials and equipment, training aids of various types and uses, boat or vessel utilization, field trip planning scheduling, guest speaker invitation and coordinating, instructional texts and references, various organizational and operational considerations in the realm of over-all administrative and operational applications. Included in these zones of concept and application are such topical brackets as personnel procurement, orientation, training and supervision, information monitoring, collecting and application of data, actual operational applications, orientation and training programs for personnel development and technique application, material and supply identification, requisitioning and procurement, physical handling and storage, operation and maintenance, repair and replacement, as necessary.

Special programs are to be considered in the general category of fire fighting and damage control, diving, submersible operations, public relations, classroom and laboratory allocations.

FINDINGS, CONCLUSIONS, RECOMMENDATIONS

As a result of completing the first year pilot research project, it is considered that primary behavioral teaching objectives have been achieved to a high degree. Students who have successfully completed the first year program are now capable of navigating, steering, mooring, docking, anchoring and maneuvering commercial vessels up to 130 feet in length. These students are able to perform pre-operational, operational and post-operational tasks related to diesel engine main propulsion power plants and auxiliaries aboard ship. The students are able to operate effectively the electronic equipment aboard ship to include radar, radio, radio-telephone, fathometers, LORAN, automatic pilot and other associated equipments. Students are capable of performing preventive maintenance aboard ship.

Students will be able to direct, conduct and participate in emergency drills and in actual emergency situations. These situations would include fire, man-overboard, abandon ship and collision, both drill and actual.

During the first year program, primary reliance was placed on shipboard installation for student hands-on access to equipment. Equipment requisitioning was on a conservative, low-profile level during this first year since student in-put was a relatively unknown factor. Fifteen students were considered a mandatory minimum in-put for program start-up, and thirty-four actually registered for the beginning program.

It is contemplated that equipment and supplies will be provided in full complement to support the second year of operation, with sixty full time students on hand, as a planning factor.

Equipment in support of program operations would include: (1) Navigational equipment such as sextants, parallel rules, dividers, charts, chart measurers, chronometers, peloruses, stop-watches and binoculars; (2) marine cut-away engine and machine components, diesel and gasoline engines, injector sets, testing stands and devices; (3) seamanship equipment: fiber, nylon and composition rope and line, wire rope and cable, blocks and tackles, various types of cordage, ship's boat equipment and mooring devices, signal and communications lights, flags and keys and tools for marlinspike seamanship; (4) radio telephones, fathometers or depth finders, radar sets, radio direction finders and LORAN equipment; (5) other categories of equipment would include oceanographic instruments, diving equipment and fisheries technology equipment.

During the college year 1971-72, thirty-four students registered for the first semester and thirty students registered for the second semester. Twenty-five students successfully completed the first year (first and second semesters) of the program. These students are currently engaged in the Summer Industrial Practicum with Marine Industry. Several of the students entering the program were eliminated from the program for reasons such as marriage, draft, academic failure, lack of adaptability, career indecisiveness, financial reasons, and job requirements.

It is felt that the first year of operations, embracing the time-frame of the research project, was highly successful. Recommendations are that the program be continued as planned for the future, with only modification to the first year of operation being that of employment of additional full-time instructors.

It is planned that two additional full-time instructors will be employed in the program, effective with the Fall Semester, 1972-73.

APPENDIX

PAGES 55 THROUGH 59 CONTAINING PHOTOGRAPHS OF PROJECT ACTIVITIES WERE REMOVED FROM THIS DOCUMENT PRIOR TO ITS BEING SUBMITTED TO THE ERIC DOCUMENT REPRODUCTION SERVICE.

Off-shore Industrial Ship
Typical Training Vessel used in OMT Lab

Work boats come in sizes ranging from 85 feet up to 165 feet and with horsepower to space. These specially designed and engineered boats are used for the offshore oil industry, as scientific research vessels or for the complete range of oceanography service, geophysical survey work, and for many other special applications.

Every one of these boats, whether crew or work boat, comes completely equipped with latest safety devices, navigational aids, communications equipment and dependable auxiliary power for all requirements.

Most oil and mineral support is from Texas and Louisiana ports.
These newspaper ads show the need for qualified personnel in the State of Texas.

NEEDED IN
FORT WORTH, TEXAS

MARINE BUYER

Immediate opening. Must be well experienced as a buyer of precision machined parts and assemblies for submarines, warships and merchant ships. Estimating experience also desirable. This includes hydraulic systems, deck machinery, handling systems and marine mechanical and electrical control systems. Must be thoroughly proficient with Mil Specs ABS and USCG requirements. DOD security clearance required. Requires relocation to the Fort Worth-Dallas area. Excellent salary and fringe benefits and chance for advancement. This is a ground floor opportunity with a growing subcontractor of shipboard machinery.

MENASCO MANUFACTURING CO.

Faculty members get A&M awards

Truman T. Isbel and Edward "Ned Middleton, both on the staff at Brazosport College, are recipients of Texas A&M University's Sea Grant Merit Awards.

The honors went to Isbel, director of technical and vocational education, and Middleton, director of oceanic and marine technology, for their efforts in promoting marine affairs.

Brazosport College, a member of A&M's Sea Grant Program, is currently training two-year students, providing manpower for research ships and is involved in ventures related to marine resources development and coastal zone management.

Capt. Middleton speaks to BC Faculty Ladies

The Brazosport College Faculty Ladies Club held its regular monthly meeting on March 28 at the Brazosport Savings and Loan office here.

Guest speaker Capt. Ned Middleton, head of the Oceanic and Marine Technology Dept. of Brazosport College, explained the department's program to the approximately 25 persons present.

A report on the club's bake sale, held early in March, indicated a profit of about $115. The meeting concluded with a progress report on the club's project, and announcement of a banquet to be given by Roland Travis for the faculty, their wives and husbands, April 15 at the college.

25 O.M.T. STUDENTS GET "Z" CARDS

Twenty-five Oceanic and Marine Technology students recently received their Z-cards. The card is in reality an Ordinary Seaman's license.

Pictured on the right us Thomas Mayfield and Ensign Ellard, of the United States Coast Guard. Ellard is administering the oath preparatory to the issuance of the Z card.

O.M.T. students are nearly all assigned to their summer jobs. Among other places, students will be working in east Africa, in New Foundland, and on the Gulf of Mexico. Several students will be attached to Brown and Root and Western Geophysical for the summer.

BAR-C ORGANIZED

The Bar C (Brazosport College Agriculture and Rodeo Club) has recently been organized on campus.

For some time, students have been trying to organize both an agriculture and rodeo club. Finally, according to Lloyd Persons, the two groups combined interests and the Bar C resulted.

Approximately 30 members have attended the three meetings since organization.

Club officers include: Ray Setzer, President, Larry Donnelly, Vice Pres., rodeo, Lloyd Persons, Vice Pres., agriculture, Secretary Pam Jackson, Treasurer Kathy Faulkner, Reporter Sammy Krolczyk, Sentinal Don Germany, and Student Senate Representative Curtis Karisch.

One of the clubs activities comming up soon includes a fund raising project to raise money for a horse show.

The next meeting of the Bar C will be on Tuesday, March 20. Everyone is invited to attend.

43 area school principals and administrators met at Brazosport College on Texas Independance Day for their regular monthly meeting.

SCHOLARSHIPS AVAILABLE

September, 1971, marked the start of a new scholarship program set up by the 62nd Texas Legislature requiring junior and senior colleges to set aside approximately 6% of tuition revenue as scholarship funds. Each school was allowed to set up a standard for awarding these scholarships.

At Brazosport College a committee composed of faculty and staff members interview applicants and decide who should get the awards. Criteria include full-time status, a "C" average (2.0 gpr), and not being on probation.

Scholarships can be renewed each semester provided students meet the criteria. During fall semester, this year, 15 students applied and received scholarships. There was money for many more.

Applications are available at the Dean of Students Office for fall and spring semesters. For additional information, contact the Dean of Students, or see one of the college Counselors.

O.M.T. STUDENTS RECOGNIZED

Four Oceanic and Marine Technology students at Brazosport College recently received special letters thanking them for their participation in the Flower Gardens Ocean Research Project.

John Blomsheild, James Wheatley, Ray Arceneaux, and Bill David spent five days on last month's exhibition helping scientists and divers study the reef area soon to be the site of the world's first permanent underwater habitat and America's first continental shelp laboratory.

The project includes a laboratory to be built on the bottom of the Gulf of Mexico, 135 miles southeast of Galveston, in 100 ft. of water. Also part of the project is the construction of a laboratory platform on the surface, over the flower gardens, that will contain classrooms, laboratories, sleeping and living quarters, life support equipments, and a landing pad for helicopeters.

The project is currently taking 2-4 O.M.T. students on each trip.

Center for Marine Resources • Texas A&M University • A Sea Grant College

April 6 Proclaimed Sea Grant College Day

Everyone is invited to attend SEA GRANT COLLEGE DAY ceremonies Thursday, April 6, of Environmental Education Week.

Over 40 state and 15 federal agencies have been invited to participate in the activities. The Honorable **Ray Lemmon**, State Representative will be the guest speaker at the luncheon in the Memorial Student Center.

Dedication ceremonies begin at 9:30 a.m. at the new Engineering Center on campus, during which time certificates for special services leading to the naming of Texas A&M as a Sea Grant College will be presented.

Two seminars are scheduled for the afternoon. **Robert Abel**, director of the National Sea Grant Program, will speak on marine related occupations while **Alan Lohse**, senior scientist for Gulf Universities Research Consortium, will speak on public policy and problems of the coastal zone.

Chairing the planning committee is **Leatha Miloy**, head of the Department of Marine Resources Information. **Rosemary Boykin**, of the same department is co-chairman. Other members include **Jack Jones**, Texas Agricultural Extension Service; **David Woodcock**, College of Architecture and Environmental Design; **Kathryn Delaune**, Industrial Economics Research Division; **Robert Rucker**, landscape architect; **Lana Stephenson**, University Information; and **Buck Weirus**, Association of Former Students. ■

Search for the FOGG

★ • The 130-foot industrial work boat, *MV Miss Freeport*, leased by Brazosport College as a training vessel, was the vessel that found the missing tanker *V.A. Fogg*, which apparently exploded and sank in 90 feet of water 50 miles off the coast of Galveston. No students were aboard *Miss Freeport* which had been leased for rescue operations at the time.

★ • **Bobby Patterson**, a Brazosport College student who earned his Master's license for a 100-ton vessel under **Ned Middleton's** marine technology program, captained the *Scamp*, a vessel owned by a deep sea diving company that sent divers to investigate the wreckage of the *Fogg*. ■

$...The National Science Foundation has awarded Texas A&M University a $488,000 grant for operating the *R/V Alaminos*. The *Alaminos*, a 179-foot vessel, is the oceanography department's largest ocean-going vessel. ■

Urban Area Studies Form Center

A Center for Urban Problems has been established within the Texas Engineering Experiment Station. The Center plans to promote research proposals, offer short courses and present conferences and seminars. For further information contact Richard E. Thomas. (845-6431)

Galveston, Texas 77550

5950
12 May 1972

Dr. J. R. Jackson, President
Brazosport Junior College
P. O. Drawer 995
Brazosport, Texas 77541

Dear Dr. Jackson:

On 10 January 1972, I visited Brazosport College, Brazosport, Texas as one member of a group of Coast Guard officers requested by our Headquarters in Washington, D. C. to review your program outline of the Oceanic and Marine Technology course and to make an on-site survey of the physical facilities. My overall impression of the facilities and your oceanic program at Brazosport College was most favorable.

The physical plant at Brazosport College is well designed and appears to be suitable for its intended purpose for many years to come. Likewise the curricula developed for the Oceanic and Marine Technology program has a careful balance between academic, technical, and practical training which should satisfy the educational needs of students interested in a maritime career and also further the development of professional seafarers.

Both the growing offshore oil industry and the expansive towing industry in this country sorely need a practical and academic program of the type you have developed to train their licensed and unlicensed personnel. Your Oceanic and Marine Technology program should encourage a sufficient number of suitable persons to make the sea their career and thus be of great benefit to these industries and to all concerned.

Sincerely,

J. I. McLEAISH
Commander, U. S. Coast Guard
Officer in Charge, Acting

Department of Transportation
UNITED STATES COAST GUARD

MAILING ADDRESS:

5950-13

Mr. J. R. Jackson, President
Brazosport Junior College
P. O. Drawer 995
Brazosport, Texas 77541

Dear Mr. Jackson:

This is in reply to your letter of 20 August 1971 and the several telephone communications with Mr. Ned Middleton and officers of my staff concerning your request for approval and accreditation of your Oceanic and Marine Technology Program. You had requested approval of training school and training vessel time as creditable sea time for your students making application for U. S. Coast Guard certification and licensing in both deck and engine categories.

On 9 August 1958 Public Law 85-672 was passed which became codified as 46 United States Code 1381, et seq. This law declared it our national policy to foster the merchant marine by assisting and cooperating with the states and territories in the operation of maritime academies or colleges for the training of merchant marine officers. Within the context of this statute, and as Brazosport College is supported by the Texas Education Agency, general approval is granted of your program to provide higher trained persons for service aboard United States flag vessels. Accreditation, as understood in its usual sense, is not given by the U. S. Coast Guard as this is a function reserved to educational bodies or societies.

Your application and the descriptive literature describing the course of study have been reviewed. The course descriptions have not mentioned the total amount of sea experience that a student would gain while enrolled. Within the intent of Title 46 Code of Federal Regulations 310.3 the minimum period of training shall be three years of which six months shall have been in cruise status to establish eligibility to be examined for a license to serve on inspected vessels of the United States as third mate or third assistant engineer.

Lesser licenses for which graduates of your two-year course of instruction might qualify will be the subject of further exploration. I have designated a member of my staff, Captain J. V. Caffrey, Chief, Merchant Vessel Personnel Division, to be my direct representative in working with you to determine what specific approvals as to certificating and licensing are warranted by virtue of graduation from Brazosport Junior College.

Sincerely,

W. F. Rea, III
Rear Admiral, U. S. Coast Guard
Chief, Office of Merchant Marine Safety

SEA GARDEN CORPORATION

Mr. Truman Isbell, Director
Brazosport College
Brazosport, Texas

Dear Mr. Isbell:

It has come to my attention that Brazosport College will be conducting a training program, Marine Technology In Its Various Forms.

It gives me a great deal of pleasure and satisfaction to know that this program will be introduced at Brazosport College next fall. The commercial fisheries of the United States and the Texas Area especially, will profit greatly by the teaching of the different techniques used in the fishing and shrimping industry along the Texas Coast.

This company is anxiously looking forward to the early availability of some of the students in an on-the-job training capacity.

Again let me say that it is gratifying to know that this program is in capable hands and will move forward in your college next fall.

Sincerely,

Will Hardee

SUBJECT: Proposed College Program in Marine Technology, Brazosport College, Brazosport, Texas.

Realizing the shortage that exists within the shrimp industry of competent small vessel captains, this company sincerely recommends the initiation of a program designed to produce potential shrimp vessel captains. We would like to officially request that graduates of this program be referred to us for employment. To the extent possible, we will support the program by hiring eligible students for summer work aboard our vessels.

Gentlemen:

Colonel Franz Ross has kept me informed concerning the prospective Marine Technology Program which is to be instituted beginning in the Fall of 1971 and I am writing this letter to express my appreciation for your interest in making such a program possible.

During some twenty years in the shrimp industry, I have served as Past-President of the Texas Shrimp Association and the Shrimp Association of The Americas. I also served for seven years on the American Fisheries Advisory Committee in the Department of Interior, and in many other fisheries organizations.

In the course of my activity, I have done as much as I could to encourage training programs, knowing full well that the industry is suffering tremendously from a lack of capable and efficient personnel on the vessels. While a number of training schools have materialized in Gulf of Mexico ports, to date they have not proved effective despite the considerable money and time spent. From my discussions with Colonel Ross and others, and from an examination of the outline he sent me recently, I am confident that the concept of your program will be far more effective than any we have had in the past and I most certainly will do everything I can to help make it a success. I have already indicated our willingness to participate and shall encourage others to do so.

Sincerely yours,

THE LIBERTY FISH & OYSTER COMPANY

Brazosport College
P.O. Box 955
Brazosport, Texas 77541

Dear Ned:

I have read with interest the proposed content for the brochure and the course outline. My own experience leads me to suggest that the content of the brochure should be modified in such a way that it emphasizes early in the verbiage the fact that the course is designed to produce fish boat captains, tug boat captains, etc. Whether we like to accept it or not, oceanography as a calling has been terrifically over-played and the conduct of so many courses has resulted in flooding the market with so-called oceanographers for whom there are no jobs. I am afraid that the emphasis on oceanography, hydrography, etc., will have a tendency to dilute the interest of fishing fleet owners and from a practical standpoint this is an area in which I believe the most vacancies exist.

I do not in any way mean to imply that the other callings should be deleted. But I recommend that the early paragraphs immediately bring out the fact that a program is being developed that will provide well qualified potential small vessel captains. Then in later paragraphs expand to include other callings.

The course descriptions and the certificate program I think are well designed and worded. There is one area that I would suggest modifying. Technical Physics. Dr. Sainsbury told Mr. Isbell and myself about the unfortunate experience they had in attempting to teach regular college physics. This was initially required by the University of Rhode Island. However, because of the problems with the students, Dr. Sainsbury found it necessary after the first year to "sell" the university on the idea of substituting a practical physics course for the technical physics course. The technical physics course was

reduced to that which directly pertained to the field for which students were being prepared --- electrolysis, the action of salt on metal, etc. I suggest that you contact Dr. Sainsbury if you need more detailed information.

Consideration might also be given to emphasizing the fact that mathematics and physics courses are practical courses designed to teach the potential small vessel captain what he needs to know.

I am inclosing a draft of a letter that, with your approval, we can send out from this office. This letter will be sent to those firms that were starred on the list that I sent you. In order to save time, I would appreciate your contacting me by phone and advising of any recommended modifications, changes, etc.

Under separate cover, we are forwarding a package that includes additional course material, reference books, etc.

You are certainly to be commended on the way that you have attacked this problem and the evident success that you are having in developing the program.

Sincerely yours,

Franz H. Ross, Sr.

May 18, 1971

Dear President Jackson:

I have noted with pleasure the inception of the Oceanic and Marine Technology program at Brazosport College. Involved, as I am in directing the world-wide, off-shore operations of a 40 vessel fleet, I am uniquely conscious of the urgent need for formally-trained men in the area of boat operations, both deck and engine.

Your Brazosport College program promises to effectively alleviate the current shortage of skilled boat operators and of those men capable of successfully passing U.S. Coast Guard Licensing examinations.

My company will be pleased to support your program in any way possible and will anticipate employment of your Marine Technology graduates as they complete their training.

With appreciation for your far-sighted programming of marine-oriented courses.

Sincerely,

Eddie Dyer

TITLE: OCCUPATIONAL-TECHNICAL CURRICULUM DEVELOPMENT TV STUDY.

DESCRIPTOR: *STATE OF THE ART REVIEWS; *CURRICULUM EVALUATION; *VOCATIONAL EDUCATION; *TELECOURSES; TELEVISION CURRICULUM; PROGRAM EVALUATION; PROGRAM EFFECTIVENESS; *FEASIBILITY STUDIES

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 47P.; RELATED DOCUMENTS VT 103 207 AND VT 103 208 IN THIS ISSUE.

ABSTRACT: THIS REPORT PRESENTS THE RESULTS OF A STUDY TO INVESTIGATE THE DESIRABILITY AND FEASIBILITY OF OFFERING OCCUPATIONAL-TECHNICAL COURSES ON TELEVISION. SECTION I PROVIDES A REVIEW OF VARIOUS EXPERIMENTS AND STUDIES ON THE EFFECTIVENESS OF TELEVISION INSTRUCTION IN OCCUPATIONAL-TECHNICAL COURSES. A REPRESENTATIVE SAMPLING OF COLLEGES OFFERING TELEVISION IN OCCUPATIONAL-TECHNICAL COURSES IS PROVIDED ALONG WITH A DISCUSSION OF TELEVISION INSTRUCTION AS A PACKAGE, PRE-PRODUCTION TESTING, LIMITATIONS OF TELEVISION TEACHING, ATTITUDES TOWARD TELEVISION INSTRUCTION, ANIMATION AND DRAMATIZATION, LECTURE-INTERVIEW-PANEL DISCUSSION, AND ADDITIONAL TECHNIQUES. SECTION II PRESENTS THE EVALUATION RESULTS OF PILOT DEMONSTRATIONS OF THREE TELEVISION COURSES: COMPUTER SCIENCE FORTRAN PROGRAMMING, FUNDAMENTALS OF CRIMINAL INVESTIGATION, AND RADIOGRAPHIC POSITIONING. IN SECTION III, THE RESULTS OF THE DALLAS COUNTY COMMUNITY COLLEGE DISTRICT TELEVISION EVALUATION FOR 1974-75 ARE PRESENTED ALONG WITH SOME ADDITIONAL STATISTICS AND RECOMMENDATIONS AND REVISIONS. A BIBLIOGRAPHY IS ALSO INCLUDED. (NJ)

INSTITUTION NAME: TEXAS EDUCATION AGENCY, AUSTIN. DIV. OF OCCUPATIONAL RESEARCH AND DEVELOPMENT.; DALLAS COUNTY COMMUNITY COLL. DISTRICT, TEX.

OCCUPATIONAL TECHNICAL CURRICULUM DEVELOPMENT TV STUDY

PROJECT DIRECTOR - Lyndon McClure

Developed Jointly By the Division of Occupational Research and Development, Department of Occupational and Technical Education, Texas Education Agency and The Dallas County Community College District, Dallas, Texas.

Project Numbers - 42309075, 42301442.

OCCUPATIONAL-TECHNICAL

CURRICULUM DEVELOPMENT TV STUDY

DEVELOPED JOINTLY BY:

The Division of Occupational and Technical Education, Texas Education Agency

and

Dallas County Community College District
Dallas, Texas

PROJECT NUMBERS: 42309075, 42301442

046 802 32

ACKNOWLEDGEMENT

Special recognition in the development and implementation of this study goes to the following individuals.

- Travis Linn - Assistant to the Chancellor
- Ted Pohrte - Instructional Development Specialist
- Bette Plog - Instructor, Computer Science
- Mary Watts - Division Chairperson, Allied Health
- Pat Schuster - Instructor, Police Science

OCCUPATIONAL-TECHNICAL TV

The Dallas County Community College District operates an Instructional Television Center (ITV) which includes producers, resource and instructional design specialists, production assistants, writers and a filmmaker. The center contracts with KERA-TV Channel 13 for studio services, video-tape services and graphics.

Four telecourses are presently being offered: Man and Environment, English 101, American Government and Introduction to Psychology. Each telecourse offers three hours of college credit upon successful completion. The courses, and the credit, are equivalent to that offered on campus.

In addition to the four courses mentioned above, the following courses will be added in the fall of 1975:

History of Science (Based on Ascent of Man)

Anthropology (Developed by Coast Community College District)

Consumer Finance (Developed by the University of Wisconsin)

English Literature (Developed by the DCCCD)

Introduction to Business (Developed by the DCCCD)

Enrollment in 1974-75 has averaged 950 students per course per semester in Dallas County. Other institutions in the North Texas area, Tarrant County Junior Colleges, Weatherford College, McLennan Community College, Hill Junior College and Navarro Junior College have offered the same courses in a cooperative arrangement and their combined enrollment equals the Dallas County enrollment.

The telecourses combine televised lessons (offered at a variety of times each week to fit a students personal "prime time"), related reading and assignments, and four to six on-campus sessions for orientation, discussion and examination.

Since the Dallas County Community College District presently offers 54 Occupational-Technical programs with an enrollment of over 8,000 students, the question was posed: What Occupational-Technical courses would be desirable and feasible to offer on television?

Additional questions related to the televising of Occupational-Technical courses were:

1. Have other educational institutions televised Occupational-Technical courses?
2. What are some problems involved in the televising of such courses?
3. What would be the costs of development and production?
4. What would be the potential enrollment?
5. What Occupational-Technical courses would be desirable and feasible to offer on broadcast television?

On the basis of the district's television experience and the need to know the answers to these questions, a proposal was submitted to the Texas Education Agency.

The proposal was funded and the project began May 1, 1973.

The initial phase of the project involved the research of literature on the subject and visits with various institutions involved in instructional

television.

The information obtained from the institutions, organizations and literature included:

1. A listing of Occupational-Technical courses presently being offered
2. Courses that were attempted and failed
3. Formats that were tried and their relative success
4. Cost of development for the institution
5. Student reaction to the television lessons
6. Identification and listing of resources
7. Types of student homework and study material
8. Methods for course evaluation and feedback

Section I of this report provides a brief review of various experiments and studies conducted in the United States and several foreign countries on the effectiveness of television instruction of Occupational-Technical courses.

SECTION I
Experiments and Studies of Occupational-Technical TV Instruction

There are certain areas where television would appear to be least effective in instruction. They are: (1) courses requiring "hands on" practice by the student and (2) courses requiring interaction between the student and teacher. However, evidence from many counties where a variety of subject matter has been taught indicate that "no significant differences" have occurred between conventional teaching and television teaching.[1] According to

William H. Allen of the University of Southern California; there is little doubt about the effectiveness of films in teaching perceptual motor skills.[2] Allen cites the work of Abram Vandemeer who studied the use of eight U.S. Office of Education films in the training of lathe operators over a long period and found that the use of films cut the working time, resulted in a reduction of the period of trial-and-error learning, and produced more factual information on machine operation. Vandemeer concluded that films are probably more effective in teaching the more complex skills than the simple ones.

It should be noted that in most of the studies reported here, there appears to be little if any difference between learning from television and learning from film. Such being the case, studies concerning the use of film and/or television will be included in this report.

Where differences do exist between a film and a television presentation, it is usually one of quality. Films provide a better quality picture generally than does television, and where high resolution is important in the learning process, films are superior. This is borne out by the work of Lonigro and Eschenbrenner, to be reported on later.

Additional studies establishing the effectiveness of television/film instruction of skilled perceptual motor acts include the work of Jasper as reported by Allen.[2] Jasper was concerned with the effects of a number of variables on learning the assembly of the breechblock of the 40mm anti-aircraft gun by naval trainees. An experimental film was able to teach 98 percent of the men how to handle the breechblock.

After having conducted a series of experiments at Yale University,

Mark A. May states: "It is obvious that in learning to perform manual tasks, visual or audio-visual presentation should be more effective than merely being told how to do it or given printed instructions in how to perform it . . ."[3]

Having worked successfully with instructional television at Pennsylvania State University, Leslie P. Greenhill says: " . . . the flexibility and reach of television make it a potentially excellent medium for teaching a wide variety of perceptual motor skills . . . Many possibilities for future exploration and study suggest themselves in the development of reading proficiency in high school children and adults, the teaching of trouble shooting for repairmen, the teaching of assembly skills, even the teaching of improved driving habits for car owners."[4]

The effectiveness of television-taught courses has been verified repeatedly throughout the nation. Pasework (1957) compared the teaching of a beginning course in typewriting by television and by conventional methods. The television-taught students learned to type significantly faster and somewhat more accurately.[1] Boone (1954) reported that Naval Academy midshipmen receiving instruction on electronics from television scored significantly higher than did students taught in a traditional manner.

Chu and Schramm made 26 comparisons of skills subjects taught via television and taught via the conventional method. Ninety-six percent of the TV-taught groups did as well or better than the conventional groups. Their conclusion was that there is no general area where television cannot be used efficiently to teach the students.[1]

One type of learning may conceivably be aided by film or television instruction. This is the learning of a skill that requires the manipulation of a particularly small object. It would seem that if the intricate components of the object can be magnified on film or television, the pupil will be able to recognize and manipulate them more easily.[1]

A study by LeMaster (1962) suggested that high school boys could be taught manipulation skills more effectively by filmed demonstrations.[1]

Lonigro and Eschenbrenner (1973) have attempted to determine the effectiveness of various types of media in the learning process. Their analysis of the effectiveness of television in instruction is especially interesting. According to the chart developed by Lonigro and Eschenbrenner to rate the effectiveness of television instruction, television is highly proficient for teaching principles, concepts and rules; partially proficient for teaching factual information, multiple discriminations and procedures; and low in proficiency for teaching the performance of skilled perceptual motor acts.

It is important to point out that in several of the studies television has carried the entire weight of teaching and as pointed out by Lonigro and Eschenbrenner television is not that effective. This point is further substantiated by Chu and Schramm as expressed in this statement: "Almost nowhere in the world is television now being used seriously to carry the <u>entire</u> weight of teaching; it is always combined with classroom teaching, or supervised learning groups, or some other device to stimulate and direct learning at the receiving end. What the results do seem to mean is that

television is not essentially subject bound . . . Where demonstrations are needed or where expert teaching needs to be shared widely, it is strong. Where learning requires continuing interchange between student and teacher, it is not strong."[1]

It is apparent that television is an effective and efficient tool of instruction. There are certain limitations in its use, but the evidence is strong that in many countries television has been effective in teaching all age levels and a wide variety of subject matter.

TV Colleges and Courses

The pioneer in open-circuit television instruction is Chicago TV College, established in 1956 to test the feasibility of offering two-years of college on open-circuit television to home viewers. Initially Chicago TV College was concerned primarily with offering courses that led to the Associate of Arts degree, recently however, occupational courses have been added to the TV curriculum.

James J. Zigerell, Executive Dean of the Chicago TV College asserts that when cable television (CATV) becomes more widespread in Chicago, more specialized technical-occupational courses will be offered via the TV College. Presently, technical courses requiring hands-on follow-up are not deemed economically feasible for open-circuit broadcast. Zigerell believes that credit

enrollments would be too small--although many working technicians would watch on a non-credit basis to update themselves.

Leadie M. Clark, Assistant Superintendent of Instruction at Los Rios Community College District in California, agrees with Zigerell that cable television will be a means through which a tremendous amount of instruction can be done, and the occupational-technical area will have an extraordinarily high priority.

George Conger, Sante Fe Community College in Florida, contends that with the movement of Nursing Associations toward requiring RN's to return to school every so often in order to remain active in the profession, television courses could be one solution.

Delta College, University Center, Michigan, offers such courses as: refresher training for nurses, TV high school, From Nine to Five (designed for upgrading new secretaries), and Supervisory and Management Training (Approximately 15,000 managers have participated in these courses).

At the Colorado Mountain College in Leadville, Colorado, A. D. Anderson, Director of Occupational Education, plans to initiate some video tape instruction in the area of fundamental electronics and appliance repair. In this instance of television instruction, the tapes will be used for closed circuit TV as opposed to cable broadcast.

An example of television instruction in the private sector is provided by Texas Instruments in Dallas, Texas. Edward Morrett, Marketing Manager of the Learning Center for Texas Instruments is now in the process of developing an entire 2-year curriculum in electronics. Texas Instruments has produced

one course entitled "Understanding Semiconductors," and it is now being sold to educational institutions and private businesses. Graphics, camera shots and demonstrations were used effectively as teaching aids.

The Nebraska Educational Telecommunications Center located on the University of Nebraska campus at Lincoln, Nebraska is the center of the Nebraska Educational Television Network. The "Center," one of the most comprehensive operations of its type in the United States, is capable of producing, duplicating and distributing every form of instructional technology: broadcast television, closed circuit television, television cassettes, color and black and white films, filmstrips, photographs, all forms of arts and graphics, as well as printed materials. In addition the University of Nebraska co-sponsors with the Department of Health, Education and Welfare a "University Without Walls." It is termed the S.U.N. (State University of Nebraska) project. It is the intent of the S.U.N. project to develop and offer first and second year college courses for credit through telecommunication and regional Resource Centers such as high schools, libraries, private and public colleges and universities. Each televised lesson departs from the traditional lecture technique and instructs creatively with dramatic vignettes, true to life situations and graphic examples. The lessons are divided into parts called modules: study guide syllabus (including textbook material), television, audio cassette, newspaper, learning kit and testing.

A recent development among community colleges offering television courses is the Television Consortia. In an effort to share resources more efficiently, individual colleges, and college districts have entered into

agreements whereby courses developed by one college are made available on a lease or rental system to other colleges in the consortia. In California alone there are presently seven consortia involving more than forty five Community Colleges.

The author has not attempted to list all the colleges offering television instruction, but has instead attempted to provide a representative sampling of colleges offering television courses in the occupational-technical curriculum. The evidence is growing that television instruction, at one time out of favor among educators, is having a rebirth. However, a comparison between television instruction of the 1950's and early sixties and that being developed now can show the reason for this rebirth.

Television instruction even though carefully planned, budgeted and used appropriately still cannot stand alone. Television must be part of a package in order to be an effective educational tool.

TV Instruction as a Package

Godwin Chu and Wilbur Schramm provide some insight into what often happens when school systems engage in television instruction.[1] Very seldom do schools provide enough lead time for setting up an instructional system. Financing, delivering and operating the hardware comes first, followed by the development of the software.

According to several television instructors, there needs to be a lot of lead time to plan a course. It would be best to begin planning twelve months in advance and tape all the programs prior to the start of the next year.

Inadequate attention is given to methods and content of television teaching. Typically there is seldom enough time to review the curriculum and methods of teaching when gearing up for television instruction. But there is an unequalled opportunity to review what is to be taught, against the goals and objectives of the system, and to review and recast the methods of teaching that have grown up over the years.[1]

The crux of the problem is to determine whether the effectiveness of a course in terms of the educational needs of students is improved by its adaptation to television. Adaptation of courses to television and of television to courses should be proposed, justified and defended in terms of improvement of the courses as one part of the academic and personal development of students. In this connection it would seem that television has many possibilities for the effective presentation of a wide variety of learning experiences: close-ups of small objects, models, demonstrations, motion and still pictures, charts, guest speakers and panel discussions.[7]

Too little attention is given to mastering the skills of effective teaching by television. A classroom teacher, without previous experience in using television, needs to learn a great deal about the medium. He needs to observe himself as a television teacher and to make maximum use of feedback from pupils and other teachers and to do a great deal of preparation so as to make his broadcast more than a talking face. He needs to gather visuals, to arrange demonstrations, interviews and develop other variety-producing devices.[1]

The development of an effective television course might follow the

pattern as described by Leslie Greenhill.[4] The first step would be to define course and lesson objectives in terms of detailed descriptions of desired terminal behavior of students, followed by building, testing and refining adequate measures of student performance. The next step would involve the selection of content and presentation methods which appear to be appropriate to the stated objectives, and recording these on video tape. At this time it would be appropriate to expose students to the televised course and administer the criterion test or tests. On the basis of an analysis of test performance and on the basis of interviews with students, modifications could be made in the original lessons and revised versions could be recorded. Finally, a comparison could be made of the effects of the original version and the revised version on the performances of students randomly assigned to the two treatment groups.

Too little time and money are allotted to training for the instructional use of television. It has often been noted that the personnel of instructional broadcasting consists largely of educators who do not fully understand television. The product most needed is the combined broadcaster - educator.[1]

The questions occur: what makes for an effective television course? What are some things to avoid and are there guidelines that can be followed? Charles F. Hoban of the University of Pennsylvania states ". . . an audience responds to a film and learns from it more effectively when (a) the audience becomes involved in the subject presented on the screen; (b) the story of the film is told visually, and verbalization at an optional level is integrated

with the visual presentation; (c) crucial sequences are repeated in the film; (d) the rate of development is adjusted to the rate of learning of the audience; and (e) the audience is oriented to the story or task presented in the film . . . any or many of these factors, if improperly employed in a film may interfere with learning rather than facilitate or contribute to it. Too much talking, irrelevant introductions, unwieldly audience participation, fast rate of development, high density of facts, a too-literal representation which obscures the audience's perception of the crucial cues -- all appear to detract from the effectiveness of films in instruction."

"The degree of specificity with which the producer describes the attitudes he wishes to engender, states the points of information he is trying to convey, or defines the objective he intends to accomplish, is related to the accuracy with which predictions can be made concerning the effects of his film on a given audience."[5]

Relating more specifically to occupational-technical television courses, Mark May of Yale University contends that a visual presentation is much more helpful for cueing the correct manual responses than a verbal description. According to May, "If the task is to perform a sequence of acts, such as knot tying or assembling the parts of an automobile ignition distributor, the responses required by the demonstration are also different from those required by verbal learning tasks." Before any useful statement can be made about the roles of visuals and verbals in motivating cuing and reinforcing acquisition responses it is necessary to know what kinds of responses are being considered and the conditions on which they depend. For example, if

the task is to acquire a perceptual - motor skill, or to memorize a list of names or verses of poetry, or to form a new concept, a number of repetitions or amounts of practice may be required, but if the task is to understand an explanation or to grasp a principle, a single presentation may be sufficient.[3]

According to Leslie P. Greenhill of Pennsylvania State University "In teaching some skills it is undoubtedly necessary to provide for concurrent practice by the learner. To achieve this, a demonstration is presented in a series of steps and time is allowed for the learners to perform each step on their equipment before the next step is shown over television. Some of the early film research studies testified to the efficiency of this method if the rate of development of the presentations was slow enough to permit the learners to alternate attention between the demonstration of film and their own performance.[4]

Pre-Production Testing

Perhaps the most effective method to assure that a television course will meet the students needs is pre-production testing.

In a classroom situation there is two-way communication: questions may be asked about misunderstood or misinterpreted portions of the original message and as a result misinterpretations may be corrected. A television course can in a sense have this two-way communication via pre-production testing. There is a need for pre-production testing when (1) the target audience is specified, (2) the content is complex and (3) no precedent exists for content or method.

"The crucial decision of when to introduce the test is resolved to one of determining the earliest stage in production at which a sufficiently representative model of the finished film can be provided for the test audience. Experience has demonstrated that, in most cases, the story board is the earliest form with which persons unaccustomed to thinking in cinematic terms can make judgments . . ."[6]

"The basic task of the pre-production tester is to provide a model which in as many of its significant aspects as possible, will faithfully resemble the finished product.

Even if it were possible, it would be impractical for a producer to test all of the persons in his target audience; instead, he resorts to a sampling procedure to obtain a small group which resembles the target audience . . . If the model does not resemble the target audience in the characteristics deemed important, the result of the test will have little value."

Additional factors to consider when selecting a course to be offered by television include: (1) There should be a clear need for television in terms of numbers of students to be served either now or in the near future, or in terms of shortages of competent faculty members either now or in the foreseeable future, (2) The instructor who will teach the course should be a thoroughly competent teacher, and one who is personally interested in experimenting with his course on television, (3) There should be some possibility of improving the quality of the instruction, (4) It should be feasible to schedule the course on television.[7]

The crux of the problem is to determine whether the effectiveness of a course in terms of the educational needs of students is improved by its adaptation to television. Adaptation of courses for television implies much more than applying many of the production techniques of professional television, radio and drama. Adaptation of courses to television and of television to courses should be proposed, justified and defended in terms of improvement of the courses as one part of the academic and personal development of students. In this connection it would seem that television has many possibilities for the effective presentation of a wide variety of learning experiences: close-ups of small objects, models, demonstrations, motion and still pictures, charts, guest speakers and panel discussions.

It is very difficult to adapt existing courses to television. Established courses are not easily modified. Furthermore, experienced teachers find that their courses become strongly integrated as personal habit systems and hence they are difficult to change. The best possible approach in some areas may be the planning and developing of new courses with the view to presenting them over television and taking full advantage of the medium.[7]

Another important factor to consider as Carpenter and Greenhill noted earlier is the necessity of good basic instruction if television is to be an effective means of meeting the educational needs of students. A skillful studio teacher is the best learning aid that could be combined with television. There are very real doubts that humor contributes to learning from television, or that dramatic production is any more effective than lectures or discussions, or even that animation contributes to learning except in situations where it

clearly calls attention to the items to be learned. But the basics always seem to work, in television teaching as in other teaching.[1]

On the other hand there is reason to think that, in some circumstances at least students may like color better than black and white, they may enjoy animation, they may appreciate the change of pace to dramatic presentation, and so forth, it may be necessary, with the television teacher deprived of instant feedback from her audience and with the audience deprived of the opportunity to ask a question or interrupt the exposition, to do a little extra in order to maintain interest, even though the extra things may not themselves contribute directly to learning. Similarly, it may be necessary to go to special efforts in order to keep the students active and responding during the television lesson.

There is good reason to ask whether television should now adopt as a standard practice, wherever possible, the pretesting and revising of televised lessons.

One of the chief residues of the last ten years of activity with programmed instruction is a mountain of evidence that more effective learning experiences can be developed by testing materials on students, revising, testing again, and so on. A procedure like this may have to become standard practice as a substitute for the swift feedback and the intimate knowledge of a class that the classroom teacher has and the television teacher does not have.

In the Chicago TV College comparisons were made among students taught face to face and students taught by television at home. Where

significant differences were found, the TV at-home students did better than the others. Because the at-home student cannot benefit from the motivating sources of "social support" and competition engendered by the classroom, the lack of these factors would seem to work against viewing at home. However, there are other factors that may be operating in favor of viewing at home. For instance, the students may feel they have been picked out as guinea pigs, and may react by working doubly hard, particularly if the program is of a short duration. This is generally known as the Hawthorne effect. Or the pressure for passing the course may be sufficiently great so that the students put in extra work to offset the disadvantage of viewing at home. Then, there is the possibility that those students who voluntarily enroll in home TV courses may be different from the regular school students to begin with.[1]

Limitations of Television Teaching

The television teacher, forced to talk to a camera and not directly to his students, will not be able to perceive the reactions of his audience. He will not be able to tell whether he is going too fast or too slow, where he should elaborate, or whether his lecture is getting through to the students at all.

From the students viewpoint, learning from television means he is unable to raise questions, to ask for clarification, or to benefit from the free discussion with the instructor and other students. In other words, he

is unable to benefit from certain important elements of classroom teaching.

If we regard learning as a continuous process of reinforcing the correct responses, evidently instructional television does not provide an ideal learning situation even though the student thinks he has no questions and needs no clarification. This is because the responses the student is making may not be correct. In as much as feedback to the television teacher is slow if not totally absent, these wrong responses may have been inadvertently reinforced before the teacher had a chance to correct them. This would make for inefficient learning.

The lack of opportunity for students to raise questions and participate in free discussion would seem to reduce the effectiveness of learning from instructional television, particularly if the students are fairly advanced and the material is relatively complicated.

If a student being taught by instructional television can be given immediate knowledge of whether he has responded correctly, he will learn more . . . the longer the delay, the lower the rate of learning.[1]

Practice, whether by overt or covert response, will improve learning from instructional television if the practice is appropriate to the learning task and if the practice does not constitute an interference. A learning situation involves both stimulus and response. In learning from television, the major stimulus is the message coming from the screen. The student can respond in a number of ways, for instance, by thinking about the message, making association between the concepts, rehearsing the information given, or practicing the skill demonstrated.

Given favorable conditions, pupils can learn from any instructional media that are now available.

Chu and Godwin have pointed out that the results of most studies of television instruction call for simplicity of presentation, clear organization of material, motivation of the learners, and knowledge of results and practice. The reports also strongly urge that learning can be improved by testing and revising programs.

Attitudes Toward TV Instruction

As in most innovative programs designed to improve the educational process, there will be some educators opposed to the change. This opposition to change is apparent in many of the places where television instruction has been utilized, but not to the extreme that occurred at Compton Junior College, Compton, California. Opposition at Compton became so intense that the chief executive lost his job and the television project was abandoned. There are a great number of cases where there has been less than full cooperation from classroom teachers, and unfavorable reports have been made by conventionally trained teachers and administrators on unconventional innovations.[1]

Teachers and pupils are more favorable toward the use of instructional television in elementary school than in secondary school and college. It seems that television is less happily received at academic levels where students have had a number of years of face-to-face teaching, have become accustomed to being able to question or discuss at any time, and have become

more articulate and verbal than in secondary school and college.

Administrators are more likely to be favorable toward instructional television than are teachers. Voluntary home students of televised college classes tend to be more favorable toward learning by television than are the students who take these same televised courses in the classroom.

Among the factors that determine teacher's attitudes toward instructional television are (a) how they perceive the degree of threat to the classroom teacher; (b) how they estimate the likelihood of mechanized instruction replacing direct contact with students; (c) how they estimate the effectiveness of instructional television; (d) the difficulties they see in the way of using modern techniques; (e) how conservative they are, and whether they trust or distrust educational experimentation.[1]

Instructional television works best when it is made an integral part of instruction . . . It seems to work best when it is applied to a problem of sufficient size to justify its use and encourage teachers to join in wholeheartedly, and administrators and financial controllers to give it the support it needs; and when it is used in sufficient size to bring down the unit costs, and to make its impact visible. It works best when it is planned and introduced carefully as part of a teaching-learning system rather than a branch grafted on to what is already there.

Beyond those larger considerations, the research seems to suggest that effective use of television grows out of attention to the basic requirements of good teaching, rather than to any fanciness that might be peculiar to television. The qualities that emerge from the research . . . puzzling and

contradictory though some of those findings are . . . qualities like simplicity, good organization, motivation, practice, knowledge of results, rest pauses at appropriate points, cues that direct the pupil to the essential things he is to learn, and so forth.[11]

Animation and Dramatization

Several studies have attempted to discover the effects of animation, dramatic presentation, humor etc. on instructional television. There is no consistent evidence to suggest that either humor or animation significantly contributes to learning from instructional television. However, in an experiment conducted by Lumsdaine, Sulzer, and Kipstein (1951) air force trainees viewed a film about the micrometer either in an animated version or in a non-animated version. There were other variations, such as the effects of pretesting, number of examples of micrometer reading, and viewing of follow up supplementary films. Regardless of these variations, the group that saw the animated film learned significantly more than the group that saw the non-animated film.[1]

It seems that the effects of animation, if any, are not at all extensive. Perhaps it is only when the students are bored by an uninteresting lesson, something as dull as the reading of a micrometer, that animation will help break the monotony and improve learning.

There is insufficient evidence to suggest that dramatic presentation

will result in more learning than will expository presentation in instructional television. In a study conducted in 1951, Rock, Duva and Murray found that army reservists taught by direct narration seemed to learn and retain more than those taught by dramatization.

Lecture-Interview-Panel Discussion

Students are likely to acquire the same amount of learning from instructional television whether the materials are presented as a lecture, or in an interview, or in a panel discussion. In 1956 Brandon had three speakers, each presenting one of three different topics in three formats: as a lecturer, as an expert being interviewed, and as a panelist in a discussion with another panelist and a moderator. From the nine 10-minute segments, 18 half-hour television programs were prepared, each featuring three speakers and three formats in different combinations. In the course of the whole experiment, the interview and discussion formats were found consistently more interesting to the students than the lecture presentation. However, no significant differences were found in the amount of information learned from any of the presentation formats. Thus it seems that the formats of presentation make little difference to the amount of learning from instructional television, although interview and discussion tend to be more interesting.

Additional Techniques

-Inserting questions in a television program does not seem to improve learning, but giving the students a rest pause does.

-There is no clear evidence to suggest whether eye-contact in television instruction will effect the amount of learning.

-Problem-solving instruction on television is more effective than lecturing where the materials taught involve the solving of a problem.

-Practice, whether by overt or covert response, will improve learning from instructional television if the practice is appropriate to the learning task, and if the practice does not constitute an interference. In an experiment reported by Ash and Jasper (1953), overt practice was actually found to be detrimental to learning. The task to be learned was the assembly of an antiaircraft gun breechblock. The film showed a step by step assembly of the breechblock, either at a rapid pace or at a slow pace. The rapid version ran three minutes, the slow version four and a half minutes. For each version, some of the Navy trainees were told to follow the correct assembly by working with an actual breechblock in their hands while viewing the film. This is the participation treatment. Others were told to wait until the film was over. After the film, all trainees went to tables in the viewing room and assembled an actual breechblock.

Their performance was scored by the amount of time required, as well as by a pass-fail score. It was found that with the slow film, participation resulted in significantly greater learning than no participation. But with the fast film, participation actually interfered with learning, and the no-participation group did better.

In the experiment by Ash and Jasper, the Navy trainees in the participation group were instructed to practice assembling the breechblock at the

same time as the film was being shown. In other words, they would not be able to pay full attention to the fast film. It is hardly suprising that these trainees did not learn the task well.[1]

In the United States and Britain, correspondence courses in technical education have been looked upon as a poor substitute for the classroom, however in certain other countries with scattered populations such as Australia and New Zealand, or in countries desiring to train vast numbers of workers in a short time span, like the USSR and Poland, technical education by correspondence is an established method.

Occupational- technical education can be defined in a number of ways. It can include a degree course in engineering, or training as a laboratory technician, or an apprenticeship in a skilled manual job. In some places occupational-technical education includes secretarial and other commercial courses. Even with this variety of course work, it is always possible to identify the theoretical and teach it as a body of knowledge. The practical or "hands on" work can be tackled in several different ways.

The most widely used method is to teach the theory outside of the laboratory via correspondence and/or television instruction. The practical "hands on" experience can be gained in short intensive sessions at weekend or vacation schools.

In the USSR, it takes six years to complete a technical degree and in the first three years the student is entitled to thirty days paid leave a year and forty days in each of the following years. This leave is intended to give him the opportunity to go to consultation centers for advice and practical

work. The centers are located in factories, on university campuses or are taken to remote areas via a mobile center. In addition, television is used to demonstrate practical work for a whole range of courses: one channel is set aside purely for educational broadcasting.[8]

Obviously, in a country where there is state control over industry, it is much easier to insist that employers release students for short periods, or to demand that they put their laboratory facilities at the disposal of students. However, in most countries, employers recognize that it is in their own interests to have highly trained personnel and their cooperation could be more closely sought than it is at present. Some features of the Soviet system are used elsewhere. For example, the Open University in Britain uses television, together with short, compulsory courses to teach practical work though students do not receive paid leave to attend them.

Some of these methods are just as applicable to other areas of technical teaching. The Technical Correspondence Institute in New Zealand arranges with employers for students to be released for short periods of laboratory work each year. In the long run, the theory which an apprentice studies in his correspondence course is applicable to his trade, though perhaps in the short term his everyday work may not illustrate exactly the point he has reached in his course.

In some situations, the problem may not be how to give students enough opportunity to carry out the practical work, but rather the other way round: how to provide people, who have already picked up a working knowledge of a trade, with a theoretical training which will make them into

better practitioners. The problem was posed this way round in Venezuela and the reason why motor mechanics was chosen as the first technical training course to be offered by correspondence was precisely because there were many people practicing this trade who had never learned the theory involved. A situation of this kind no doubt exists in many places, especially in the building trade and similar skilled manual occupations. In these cases, correspondence courses may be just the answer because they have the great advantage that people can remain in their jobs while studying.

According to the director of the Center for Instructional Television in France, B. Pagney, "We try to make correspondence instruction responsive to the modest role which we believe it should play in this matter. It cannot act as a medium of professional training on its own; this is fundamental, it is not a proposition, but a demonstrable fact. There cannot be, it seems to us, professional training by correspondence alone. On the other hand . . . correspondence instruction must play a very important role in this training." [6]

The instructional design for television programs in Poland involves including the whole course in the written manuals which the students have to buy from the State Press for Scientific Literature, together with books of exercises. The television programs, however, made no attempt to cover the whole syllabus. They covered between 30% and 80% of the material in different courses and the main aim was to elucidate the points which students found particularly difficult. They concentrated especially on mathematics and physics but also on knotty points in chemistry, electronics and civil engineering. The topics were chosen by the Ministry of Education, which

then delegated top university scientists to prepare the programs in conjunction with the television technicians.

The programs were centered mainly on the lecturer's talk but they also provided the opportunity to demonstrate practical work to go through problems step by step and generally give illustrative material which did not appear in the printed manuals.

The students who found the broadcasts most helpful were those who did some work on the topic beforehand and then followed up with further work soon afterwards. This illustrates once again that the programs were not intended to outline the whole course but rather to concentrate on difficult points. There was a positive correlation between those who used the broadcasts in this constructive way and those with the better examination results.

Although the majority of the students felt that the broadcasts were satisfactory, there were some criticisms made. The time of the broadcasts did not suit everyone. Many of the lecturers, although experts in their own fields, had had little experience of lecturing on television and did not always receive enough guidance about this. The result was that often they spoke far too quickly and presented more material than could really be digested by students in a thirty minute lecture. Perhaps the most persistent complaint, however, was that the broadcasts did not always coincide with the point reached in the written material.

It is important to point out that in several of the countries television has carried the entire weight of teaching and television is not that effective.

Where television has been effective: It is always combined with classroom teaching, supervised learning groups or home study material.

The studies also indicate that . . . where demonstrations are needed or where expert teaching needs to be shared widely, television is strong. Where learning requires continuing interchange between student and teacher, it is not strong.

It is apparent that television is an effective and efficient tool of instruction. There are certain limitations in its use, but the evidence is strong that in many countries television has been effective in teaching all age levels and a wide variety of subject matter.

SECTION II

The second phase of the project involved the selection of the occupational-technical courses that were to become the television pilots. A questionnaire was submitted to each of the occupational-technical instructors in each of the colleges. Thirty instructors showed interest in the project and listed the courses they felt would be adaptable for television. The courses selected as potential television courses were chosen on the basis of the following criteria: (1) the courses should involve the teaching of skilled perceptual motor acts and have audience appeal (2) the courses should be in new and growing programs and (3) the courses should reflect a variety of learning techniques.

Three occupational-technical courses, meeting this criteria, were selected. The courses were "Introduction to Computer Science," Radiographic Positioning," and "Criminal Investigation." In each of the three courses,

two lessons were developed: Each lesson becoming a fifteen minute module.

Two DCCCD Administrators were involved in the development of the project, in addition to the Project Director. They were the Assistant to the Chancellor - Travis Linn, and the District's Instructional Development Specialist - Ted Pohrte.

Linn's role was essentially one of facilitation and general supervision, with particular emphasis in the area of television production. Early in the project, as the most appropriate subjects for experimentation were being selected, he provided advice regarding the television production aspects of each potential subject, potential production problems, etc.

As an administrator, he also exercised general oversight of budget, contractual arrangements, work schedule and the like. However, actual management of the project was the responsibility of the Project Director.

Linn negotiated for television production services and consulted with faculty members regarding television production preparation and techniques. In some cases, he actually took part in the productions by appearances on camera or on the audio portions of the programs.

Pohrte, as Instructional Development Specialist, brought to the project experience and expertise in the application of learning objectives to mediated instruction which had been developed in the production of other courses.

Pohrte met with faculty members from time to time during the production of the courses, assisting them in the design of the instruction, the drawing and wording of learning objectives, and particularly in the designing and working of the (printed) study guide elements of the courses. He also served as editor of the study guides.

The pilots were completed in June of 1974 and were tested in the classroom during the 1974-75 academic year.

Computer Science Fortran Programming
Bette Plog - Instructor

The evaluation of the Computer Science Fortran Programming pilot occurred in the Fall of 1974 at El Centro College. Two weeks were allowed for the presentation of the pilot. Two groups were established: A control group of six persons who viewed the pilots via TV in the Learning Resources Center; and a similar sized class group that received traditional classroom instruction.

Two forms of testing for proficiency were given: the programming lesson assignment at the conclusion of Lesson 1; and a written comprehensive exam at the conclusion of the assigned lab work and Lesson 2.

The programming assignment was graded in the following manner: (✓+, no errors; ✓, 1 error; ✓-, 2 errors; more than 2 errors was unacceptable)

TV Group Scores		Class Group Scores	
✓+	4	✓+	4
✓	1	✓	2

1 did not attempt the assignment

The comprehensive exam produced the following results:

TV Group Scores

90-100	2	4 of these students scored at the same level as on previous tests

TV Group Scores (continued)

80-89	3	1 scored slightly lower
70-79	1	1 scored a letter grade higher

The student who did not attempt the programming assignment did use his Study Guide and took the Pre and Post tests and scored 84 points, his grade level for previous tests.

Class Group Scores

90-100	3	3 of these students scored at the same level as on previous tests
80-89	1	1 scored slightly lower
70-79	1	1 scored slightly higher
60-69	1	1 scored a letter grade higher

The TV group was instructed to view each lesson two times.

4/6 viewed Lesson 1 twice	3/6 viewed Lesson 2 twice
1/6 viewed Lesson 1 twice	1/6 viewed Lesson 2 once
1/6 did not view Lesson 1 at all	1/6 did not view Lesson 2 at all

The TV group was also asked to evaluate each lesson. While both lessons received favorable responses on the majority of questions, Lesson 2 seemed to be more favorably received. The instructor felt this was due to the more technical nature of Lesson 1.

Based upon these evaluations, the following conclusions were drawn:

1. Considering the fact that only one of the twelve students participating in the study were Computer Science majors and had previous knowledge of the subject, the results were generally better than expected.

2. Based on test grades, students in the TV group performed as well as they had previously under traditional teaching methods.
3. A carefully designed study guide, free of typographical errors is an essential element. Quality reproduction of computer listings is also essential.
4. The production of high quality telecourses requires knowledge of some of the technical aspects in order to produce effective instruction.
5. The readability level of the study guide should be carefully evaluated.

Fundamentals Of Criminal Investigation
Pat Schuster - Instructor

The pilots developed for Fundamentals Of Criminal Investigation were evaluated once in the Fall of 1974 and again in the Spring of 1975.

Twenty two persons were involved in the evaluation in October. They were divided into two groups of 11 each by random selection.

Group I was given the study guide and told to read Chapters 31 and 32 in Fundamentals Of Criminal Investigation by O'Hara. They then viewed the taped program on closed circuit TV. They were given no information from the instructor concerning the content of the lesson.

Group II was told to read Chapters 31 and 32 in Fundamentals Of Criminal Investigation. They then received a lecture by the instructor and an in class demonstration.

The grades for the two groups were as follows for those who attended all the scheduled meetings:

GROUP I	GROUP II
100	100
100	100
100	88
92	80
89	64
84	
77	

On February 25, 1975, both sections of Criminal Investigation were randomly divided. One half viewed the TV program on February 27, 1975 and worked the study guide. The remaining half received a classroom lecture on March 4, 1975.

On March 6, 1975, a test was given to both groups with a total of 42 persons completing the project. The breakdown of the scores and the means of each group were as follows:

TV	LECTURE
72	100
92	80
100	72
80	96
60	100
80	92
64	100
88	100
76	92
96	100
84	68
80	48
100	100
64	80
100	64
96	60
88	76
56	80
84	44
96	100
	96
	80
Mean 82.800	Mean 83.090

Radiographic Positioning
Mary Watts - Instructor

The Radiographic Positioning pilots were evaluated in the Fall of 1974 and again in the Spring of 1975. In both instances the timing of the evaluation occurred out of regular sequence. As a result, the evaluation might not reflect the true value of the presentation.

Both Fall and Spring TV groups responded to a questionnaire designed to test the effectiveness of the pilots. The results of the questionnaire are as follows:

1. The TV Program for this lesson was helpful in studying this lesson.
   10% - strongly agree
   70% - agree
   20% - uncertain, no opinion

2. The TV Program for this lesson caught and held my attention very well.
   20% - strongly agree
   50% - agree
   15% - uncertain
   15% - disagree

3. On the whole, I was very impressed by the technical or professional quality of the TV Program.
   20% - strongly agree
   60% - agree
   10% - uncertain
   5% - disagree
   5% - strongly disagree

4. On the whole, the TV Program was very helpful in preparing me for the test and assignment.
   10% - strongly agree
   10% - agree
   20% - uncertain
   40% - strongly disagree

5. The learning objectives stated in the Study Guide were on the whole very useful to me.
   10% - strongly agree
   70% - agree
   10% - uncertain
   10% - disagree

6. The supplementary material was very helpful in achieving the learning objectives of this lesson.
   5% - strongly agree
   50% - agree
   40% - uncertain
   5% - disagree

7. The supplementary material was easy to understand.
   15% - strongly agree
   40% - agree
   5% - uncertain
   40% - disagree

8. The methods of presentation of the subject matter were very appropriate for me.
   5% - strongly agree
   70% - agree
   5% - uncertain
   10% - disagree
   10% - strongly agree

9. On the whole this lesson was well designed to help me accomplish the learning objectives.
   2% - strongly agree
   60% - agree
   30% - uncertain
   6% - disagree
   2% - strongly disagree

10. In my opinion this lesson is an important one in this course.
    40% - strongly agree
    50% - agree
    5% - uncertain
    5% - disagree

11. I believe I learned a lot, considering the time I spent on this lesson.
    30% - strongly agree
    5% - agree
    30% - uncertain
    30% - disagree
    5% - strongly disagree

The students felt they learned better in the traditional manner with the instructor showing the student how to do the positioning. They liked the personal touch of the instructor and felt they could ask for more details. They

felt the instructor demonstration was more like "a real-life situation in the hospital."

The instructor felt that the TV presentation should have been slowed down and the learning objectives should have been flashed on the screen.

The students found it difficult to maintain interest in the TV presentation and were evenly divided concerning the value of the presentation in preparing them for the test.

SECTION III
Telecourse Evaluation Results

In addition to the results of the pilot demonstrations in Computer Programming, Criminal Investigation and Radiographic Positioning, the Dallas County Community College District television evaluation results of 1974-75 have been included. They are:

1. The overwhelming majority of telecourse students consider the telecourse to be an academically respectable and useful way to earn college credit.
2. While this mode of learning is suitable for a large percentage of students in the district, it is not well suited to all students; particularly those with serious learning disabilities.
3. Based on final grades, students enrolled in telecourses performed about as well as their counterparts in the classroom.
4. The attrition rate (percent of twelfth-day enrollees failing to earn at least a passing grade in the telecourses) for all telecourse students was approximately the same as the corresponding rate for

all on-campus students.

5. All elements used in a given telecourse are important, but their close and logical integration is a key aspect of course structure.

6. A carefully designed study guide appears to be the single most important element.

7. A well written textbook having a readability level between 10th and 12th grade seems to be a useful source of subject matter content--facts and concepts.

8. Well-designed, professionally-produced television programs, of 30-minute duration, are particularly effective in reinforcing key ideas, stimulating interest in consciencious study and causing changes in attitudes (achievement of affective learning goals).

9. Because there is far less face-to-face contact between instructor and student, than in classroom instruction, the quality of that contact is of great importance. The telecourse campus instructor, together with all other personnel involved, assumes a more critical role than usual. Personnel attitudes and learning management procedures are even more important than is traditional for on-campus courses.

10. Traditional roles and conventional wisdom in higher education appear to be of diminished relevance and usefulness in the development and operation of highly effective telecourses. An instructor who may be very effective in a traditional classroom setting may not be sufficiently effective on camera. Historically, college instructors have usually not only had full responsibility for all course elements, but

also frequently produced all elements themselves. The production of high quality telecourses, however, requires a depth and breadth of expertise rarely possessed by a single individual. In other words, a team of professional specialists and skilled technicians are essential to effective instruction by open-circuit television.

11. Frequent evaluation and revision are necessary to enhance learning significantly for telecourse students on a continuing basis.

Additional Statistics

Some useful and interesting statistics are beginning to emerge from various surveys conducted during the Fall of 1974.

1. About two-fifths of the students watch each telecourse program more than once.
2. More than 70% feel they have learned at least as much by telecourse as in classroom-taught courses.
3. About two-thirds of the students were taking on-campus courses in addition to telecourses.
4. Over one-third of all telecourse students were carrying 12 credit hours or more.
5. Of those students who responded to a questionnaire, when asked for their opinion of DCCCD telecourses: 30% were strongly favorable; 37% were favorable; 18% were neutral; 5% disliked them; Less than 1% strongly disliked them; and about 9% did not offer an opinion.
6. About two-fifths indicated they would like to earn a 2-year degree

entirely by telecourses; about one-third, the 4-year degree.

7. A general description of telecourse students includes these facts: about half of them are professionals and white collar workers; about 2/3 of them have from 1 to 60 hours of college credit; about 4/5 of them are working toward a degree (2-year, 4-year, or other); over half of them are between 20 and 40 years old; over 2/3 of them have annual total-household incomes in the $10,000 and up range, with over 2/5 in the $15,000 and above bracket; about 9/10 class themselves ethnically as white; over 1/4 were receiving veterans' benefits; and the ratio of males to females was approximately 4 to 5.

8. Production costs for thirty half-hour English 101 lessons totaled $90,000; Government 201, $85,000. Total production costs for new courses are estimated to exceed $100,000. Air time costs run $150 per hour on KERA-TV Channel 13.

Recommendations and Revisions

Based on the results of the Dallas County Community College District's involvement in televising college credit courses and the information obtained via the Occupational-Technical TV study, the following revisions and actions have been taken or are under consideration:

1. Course management procedures and ITV Center functions and relationships vis-a-vis the colleges of the district have been reviewed and changes made which appear to be serving students much more effectively.

2. Internal procedures of the ITV Center, particularly the Hotline operation, have been substantially improved by adding additional lines and operators, and by keeping operators better informed.

3. A comprehensive telecourse procedures handbook has been developed for the district which includes detailed administrative procedures and information, future plans, and program goals and philosophy. Supplements specifically designed for admissions and counseling personnel, Test Center personnel, and telecourse developers are now being prepared.

4. One of the most nagging concerns is the attrition rate which, while not significantly worse than the on-campus rate, is unacceptable; corrective actions in operation or under consideration are:

   - more accurate and complete telecourse information for potential students at the time of enrollment,
   - more and better-informed pre-enrollment counseling,
   - diagnostic testing of all enrollees in English 101,
   - better use of orientation sessions in counseling enrollees,
   - closer and more frequent follow-up with students exhibiting performance deficiencies,
   - more use of counseling and diagnostic testing services during the semester,
   - improved course management procedures,
   - improved television programs,
   - up-graded and substantially revised study guides,

- careful attention to readability levels of all print materials,
- improved integration and coordination of all course elements (particularly closer agreement between learning goals and all the instructional elements of course),
- improved validity and reliability of examinations,
- better use of newsletters and hotline service,
- better orientation of all personnel involved with telecourse students,
- more complete and accurate evaluations of the instructional system.

5. Since the study guide is the key element in the telecourse, it is especially important to be constantly alert to ways in which it might be made more useful to students; substantial changes are being made in the Writing for a Reason (English Composition) and American Government guides.

6. Evaluative data and recommendations have been solicited from TCJC and the other colleges using the telecourses--TCJC personnel involved with the telecourses have been particularly helpful and their recommendations are being seriously considered and incorporated where possible.

TITLE: PLANNING STUDY TO DETERMINE THE CAREER EDUCATION NEEDS OF AREA ONE.

DESCRIPTOR: *NEEDS ASSESSMENT; *EDUCATIONAL NEEDS; *CAREER EDUCATION; *SURVEYS; CURRICULUM EVALUATION; EDUCATIONAL PLANNING; ATTITUDES; ELEMENTARY SECONDARY EDUCATION; TABLES (DATA); QUESTIONNAIRES

IDENTIFIER: IOWA MERGED AREA I

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 115P.; PORTIONS OF THE TABULAR MATERIAL MAY NOT REPRODUCE WELL. BEST COPY AVAILABLE.

ABSTRACT: THE BASIC PURPOSE OF THIS STUDY WAS TO DETERMINE THE NEED FOR CAREER EDUCATION EXPERIENCES FOR ALL STUDENTS WITHIN MERGED AREA I OF NORTHEAST IOWA. DATA TO HELP DETERMINE THIS NEED WERE OBTAINED BY THE FOLLOWING METHODS: ATTITUDE SURVEYS OF ADMINISTRATORS, TEACHERS, TWELFTH GRADE STUDENTS, AND PARENTS; MID-CAREER SURVEYS OF A RANDOM SAMPLE OF ADULTS; ANALYSIS OF SECONDARY VOCATIONAL CURRICULUMS; SURVEYS TO OBTAIN GRADUATE FOLLOWUP AND DROPOUT INFORMATION; SURVEY TO DETERMINE INFORMATION ON LABOR DEMAND AND CURRENT EMPLOYMENT; ADMINISTRATOR INTERVIEWS; SURVEY OF STUDENT INTERESTS IN VOCATIONAL AREAS; ENROLLMENT PROJECTIONS; SOCIAL AGENCY SURVEYS; POPULATION NEEDS PROFILE; AND SURVEY OF CURRENT VOCATIONAL OFFERINGS. THE REPORT OUTLINES PROCEDURES FOR GATHERING INFORMATION RELATED TO CAREER EDUCATION NEEDS WITH THE RESULTS PRESENTED IN TABULAR FORM. RESULTS OF THE NEEDS ASSESSMENT STUDY SUGGESTED THE EXISTENCE OF A NEED FOR MORE CAREER EDUCATION OFFERINGS FOR SCHOOL DISTRICTS WITHIN MERGED AREA I. THE APPENDIX CONSISTS OF THE ADVISORY COMMITTEE MEMBERSHIP LIST, SURVEY FORMS AND QUESTIONNAIRES, SUMMARIES OF THE LABOR SUPPLY AND DEMAND SURVEY, THE STUDENT INTEREST SURVEY, THE GRADUATE FOLLOWUP SURVEY, AND MINUTES OF THE CAREER PLANNING GROUP MEETINGS. Acknowledgments

The Study and the resulting progress on the Cooperative Secondary Career Education Project was made much easier due to the efforts of many individuals. Area One Vocational-Technical School would like to acknowledge the help of: Dr. Ralph Van Dusseldorp, University of Iowa; Dr. Carl Larson, Iowa Central Community College, Fort Dodge; Dr. Kenneth Wold, Iowa Department of Public Instruction, Des Moines; Father Russel Bleich, Dubuque Archdiocese; the Merged Area One local Superintendents, Principals and staff, and the Career Education Needs Assessment Advisory Group. Without their cooperation, completion of the study would have been difficult.

I. Introduction

This document was produced by Area One Vocational-Technical School in cooperation with Dr. Ralph Van Dusseldorp, University of Iowa, who served as project consultant. The basic purpose of the study is to determine the need for career education experiences for all students within Merged Area I.

Merged Area I consists of the following counties in Northeast Iowa: Howard, Winneshiek, Allamakee, Chickasaw, Fayette, Clayton, Delaware, and Dubuque. This area consists of 4,857 square miles and 221,527 people, according to the 1970 census. There are 27 community school districts serving 45,988 students with a faculty of 2,800. The parochial schools number 44 with a total of 14,678 students.

The primary motivational force behind this study was Merged Area I trying to meet its obligations to the local school districts in Area I. Iowa school law 280A.1 Statement of Policy concerns the role of the vocational-technical school in secondary education. The vocational-technical school should provide:

> "Programs for all students of high school age who may best serve themselves by enrolling for vocational and technical training while also enrolled in a local high school, public or private."
>
> "Vocational and technical training for persons who are not enrolled in a high school and who have not completed high school."

Career Education is defined by the Iowa State University project on Career Education as "the sequence of career development experiences beginning in early childhood and continuing through adult life which prepare the individual for present and future career opportunities. These experiences are offered through various programs, services, and activities which are designed and implemented to assist youth and adults in developing attitudes and occupational competencies and in gaining employment which will result in meaningful career development."

Career Education may be understood also through the following model, according to "Career Education: A Handbook for Implementation", U.S. Office of Education, 1972.

CAREER EDUCATION PLANNING MODEL

It is anticipated that we will be able to follow guidelines established by the Iowa State Department of Public Instruction in terms of a CAREER EDUCATION PLANNING MODEL:

People Needs → ← Available Resources

Alternatives ↔

Policies and Practices
Laws and Statutes ↔

Objectives ↔

Plan ↔

Evaluation ↔

An Advisory Committee was organized within Area One for the Career Education Needs Assessment Study. These individuals met in November 1973, for initial discussion on the needs assessment study. The advisory members served as a liaison between their school and community for the questionnaires and surveys going out from Area One. They served as resource people for questions that came up during the study and also added much input during the study on an individual basis (Appendix 1).

Also serving an advisory capacity to the needs assessment study was the Area One Career Education Coordinating Committee consisting of the following local superintendents: Wayne Burns (Decorah), Max Clark (Area One), Loren Englund (South Winneshiek), Dr. Ramon Green (Starmont), and Dr. Garland Wessels (Dubuque). The coordinating committee met periodically throughout the length of the study and provided practical information on conducting the needs assessment (Appendix 2).

II. Description of Study

A. Objectives

1. Identify the scope and direction of Career Education programs presently being offered at schools within Area One.

2. Identify the need for career awareness, exploration, preparatory, and supplementary opportunities for K - Adult individuals of Area One.

3. Establish the extent of need for career awareness, exploration, preparatory, and supplementary opportunities for clients of the various social agencies of Area One.

4. Develop alternative means of meeting the needs and determine the costs of the alternatives.

5. Determine the priorities for the development of career programs at Area One Vocational Technical School.

The purpose of the study is to establish the extent of need for career education exploratory and preparatory opportunities within Merged Area I.

B. Data Used in Study

The information gathered to help determine this need is as follows:

1. Attitude Survey - Questionnaires to administrators, teachers, 12th grade students, and parents. (Appendix 3)

2. MID - Career Survey administered to adults within the area.

3. Curriculum Analysis of secondary school curricula.

4. Student Characteristics - Survey which included graduate follow-up and drop-out information.

5. CENIS - Survey provided by the Department of Public Instruction which included labor demand and current employment.

6. Administrator Interviews which were conducted by Area One Vocational Technical School with all community school districts in the merged area including parochial high schools.

7. Student Interest Survey - Provided by CENIS through the Department of Public Instruction.

8. Enrollment Projections - Provided by the Department of Public Instruction.

9. Social Agency - Questionnaires which were sent out to social agency personnel in the merged area.

10. Financial Information which utilized Annual Reports prepared by respective School District Secretaries.

11. Population Needs Profile including unemployment and low-income.

12. Vocational offerings provided by the Area One Vocational Technical School.

13. Drop-out Analysis provided by the Department of Public Instruction.

14. Population Needs Profile provided by the Department of Public Instruction.

III. Presentation of Data

A. Attitude Survey

An instrument with 14 items was submitted to the following population groups (Appendix 4).

Administrators and guidance personnal

Full-time teachers in grade K-12

Senior high school students

Parents (one parent of each 12th grade student)

Each of the four groups used the same basic instrument with modifications applicable to each respective group. In analyzing the instrument, it should be noted that

> Statements 1-3 deal with those learning activities involved with the Self as a basic component of career education. Statements 4-9 deal with those aspects of the World of Work and statements 10-12 deal with Career Planning. Statement 13 deals with Skill Building while statement 14 deals with respondents' feelings on the variety of vocational courses offered at their school.

All instruments for the different population groups used the same order of statements.

The basic purpose of the Career Education Attitude Survey was to discover present attitudes about career education from the four population groups. This information will provide assistance in developing career education goals for individual school systems desiring to implement career education in their local programs.

Specific objectives of the four-part career education attitude instrument include the following:

1. Identify parental expections of the school systems in their community in terms of the basic components of career education.
2. Determine how students feel about what the school has offered in terms of career education.
3. Determine what teachers feel they are offering through courses that are taught in the local school system in terms of career education.

4. Determine what counselors and administrators feel the school is providing in terms of career education.

A tabulation of those completing the assessment follows:

Number of schools completing the survey	27
Number of teachers	773
Number of Administrators	193
Number of High School Seniors	2,094
Number of parental responses	628

Of importance in understanding the Career Education Attitude Survey is the nature of the 14 basic questions. The teachers were asked 14 questions with the preface My course provides activities that...etc. Parents were asked the same 14 questions with the preface Our School provides activities...etc. Students were asked the same 14 questions with the preface My school has provided activities that...etc. Administrators were also asked the same 14 questions with the preface Our school has provided activities...etc.

The responses in Table 1 were grouped on a percentage basis into two categories: (1) strongly agree and agree, and (2) disagree and strongly disagree. Questionnaires used may be found in (Appendices 5, 6, 7, 8). A summary of results by question follows:

1. Seventy percent of the students and 80% of the parents felt the schools were adequately helping students develop healthy values and all four of the survey groups felt the schools should be developing this value.

2. Approximately 59% of the students and 70% of the parents indicated in their response that the schools were helping students develop positive feelings about themselves. The four survey groups felt the schools should be involved with helping students develop positive feelings.

3. In regard to helping students develop vocational interests, 84% of the administrators, 70% of the teachers, 59% of the students and 73% of the parents felt that the schools were doing a satisfactory job. The administrators, students, and parents felt the schools should be assuming this responsibility.

4. Seventy-seven percent of the administrators, 50% of the students and 67% of the parents felt the schools are adequately helping students choose careers. The greater percentage of the administrators, students, and parents felt the school should be concerned with helping students choose careers.

5. Almost 50% of the parents and students felt the school was adequately helping students learn to make proper use of leisure time. All four groups felt the schools should be involved in education for leisure time activities.

6. Forty-five percent of the students and 65% of the parents indicated that the schools were doing an adequate job in providing activities which help students learn about the world of work. All four survey groups felt that teaching the World of Work was a responsibility of the school.

7. In reference to helping students develop a positive attitude toward work, 55% of the students and 56% of the parents felt the schools were adequately performing this function. There was agreement with all four groups that this should be the responsibility of the school.

8. Fifty-two percent of the students and 58% of the parents felt that the schools were adequately developing an appreciation for the dignity and value of work. As in many of the other questions, all four groups agreed that the schools should be providing these activities.

9. Concerning the schools providing activities which help the students understand the economic nature of the nation, 79% of the administrators, 53% of the teachers, 62% of the students and 66% of the parents felt the schools were meeting this educational goal. All four survey groups felt the schools should be providing these activities.

10.& 11. Since both questions are similar, they will be interpreted collectively. In both questions, 50% of the students felt they were being provided activities which help them plan or select a career. The administrators, students and parents felt the school should provide activities related to planning and selecting careers.

12. Sixty-four percent of the students and 68% of the parents indicated that the schools were doing an adequate job in providing experiences concerning the relationship between education and work. All four of the survey groups agreed that the school should be teaching be teaching this relationship.

13. Sixty-four percent of the students indicated they felt the schools provided adequate activities which helped them to learn skills to be used in their chosen field. All four groups felt that the schools should provide these activities.

14. When asked whether their school offered a satisfactory variety of vocational courses leading to employment, 43% of the administrators, 45% of the teachers, 53% of the students, and 61% of the parents felt their school was indeed offering this variety of courses. All four groups felt that the school should offer a variety of vocational courses to their students.

Of the 14 attitudinal factors, 76% of the administrators and counselors either "strongly agreed" or "agreed" that their school was acheiving these and 96% felt these characteristics should be the responsibility of the school.

Fifty-five percent of the students either "strongly agreed" or "agreed" that the 14 stated factors were present in their school while 92% agreed that these should be the responsibility of the school.

Sixty-six per cent of responses from parents were positive, indicating satisfaction with what the schools were doing. Ninety-two percent of responses from parents, however, indicated that these factors should be the responsibility of the school.

Seventy-two percent of the responses from teachers were either "strongly agree" or "agree" and 86% of the teacher responses indicated the schools should be trying to accomplish the 14 stated attitudinal factors.

In summary, respondents are in agreement that schools should provide activities in all fourteen of the career education areas. They do not feel that the schools are doing as much as they should in any of the areas. The greatest need, as indicated by discrepancies between what the schools are doing and what they should be doing, is for a more satisfactory variety of vocational courses.

B. Mid Career Educational Needs Survey

The Mid-Career Survey was administered to a random sample of adults in Merged Area I (Appendix 9). Objectives of this survery were to determine the following:

Table 1

CAREER EDUCATION ATTITUDE SURVEY

		(n=193) Administrators %		(n=1773) Teachers %		(n=2094) Students %		(n=628) Citizens %		Total %

	Should	84.7	15.3	77.9	22.1	94.2	5.8	91.7	8.3	87.7	12.3
TOTAL	Does	76.4	23.5	72.0	27.9	55.6	44.3	66.6	33.3		
	Should	96.5	3.4	86.4	14.3	92.4	7.5	92.8	7.2		

1. Age of respondents
2. Employment of respondent
3. Geographic area of the respondent by school district
4. High school and post high school educational levels
5. Number of years employed
6. Relative job satisfaction and reasons for non satisfaction
7. Additional training needs of respondent
8. Evening class or full-term day class needs of respondent

Findings (See Table 2):

A Total of 1566 surveys were returned and categorized in order of school districts.

Questions 10 and 11 which refer to changing jobs and additional training, have implications for short-term vocational preparatory courses that could be offered. Seventy percent of the respondents indicated a willingness to attend evening classes for vocational training, and 21% said they would attend classes on a daily basis.

The survey was distributed to high school seniors who submitted the instrument to their neighbors for completion.

The survey was also distributed by Adult Education Coordinators to Adult Education students within Area One (Appendix 10).

C. Career Education Needs Information System

CENIS information was obtained from the Iowa State Department of Public Instruction. Appendices 11 - 18 include an explanation of the CENIS Study while Appendices 19 - 32 summarize the occupational areas specifically for Area One.

A summary by occupational cluster of Area One Labor Demand according to CENIS is given in Table 3.

Table 2

Mid-Career Survey Summary
(Summary in Percentage)

D. Student Interest

Another part of the CENIS project was to determine student interest in specific vocational areas. Results for Area One are listed in Tables 4 - 7.

It is interesting to note that when comparing labor needs and student interest, many times one significantly exceeds the other (Table 8).

E. Student Follow-up

The Department of Public Instruction conducted a follow-up study of 1972 high school graduates. Table 9 reveals follow-up data for graduates from high schools within Area One.

Follow-up of these graduates indicated that almost 45% of the graduates attended a post secondary educational institution with the majority of students going to area schools, state four-year institutions and private four-year institutions. Of those graduates going into employment directly after high school, clerical, sales, farm-related, and service occupations accounted for most of the occupational areas.

Table 4

Occupations chosen most frequently by students and/or needed by employers (occupation included in list if choice or demand is 25 or more).

Occupation	All Students	Post Secondary Plans: Less Than 4 Yrs. College	Post Secondary Plans: No College	Projected 1975 Need

*Occupation not included in survey

Note: It should be remembered in interpreting this Table that self employed persons are, in general, not included in the labor needs column. Thus the needs in some occupations are not accurately reflected. Examples exist in several of the agriculture occupations, many of which involve primarily self-employment.

If this trend continues, it would seem logical that the area school attempt to serve those graduates interested in these occupational areas for initial training or on-the-job experiences.

F. Curriculum Analysis

The basic curriculum information was supplied by the Department of Public Instruction and redistributed to the local high schools for categorization. Principals were asked to categorize all courses they considered to be "vocational" (Appendix 33). A vocational course was defined as "those courses or series of courses designed to provide job-entry skills (or qualifications) leading to gainful employment upon graduation."

After reviewing the data in Table 10, it can be concluded that little is being offered in distributive education and health education. Some schools in larger communities, however, have comprehensive distributive education programs. Curriculum emphasis is largely college preparatory.

G. Administrator - Counselor Interviews

Interviews were conducted within each school district which included the superintendent, high school principal, counselor and a representative from the Area One Vocational-Technical. Suggested areas for discussion were sent out to superintendents two weeks prior to scheduling interviews. Suggested areas for discussion were as follows:

1. If the Area One Vocational-Technical School were to begin serving the high school student, how best might this be done?
2. What courses would you recommend for students?
3. What students would take the courses? Freshman, Sophomore, Junior, Senior? How many in a year?
4. Where should the courses be held?
5. How would the student get there?
6. What is your recommendation for financing such a program?

7. What do you feel is the maximum distance a student should travel to these vocational courses?

8. When should courses be held? All year, concentrated more in one 9-week period, or one semester?

The interviews revealed felt strengths and weaknesses within each community school in terms of curricular offerings. Much discussion centered around the local area school possibly offering courses for high school students while they were still enrolled in high school. It is safe to say that all schools felt a willingness to cooperate in an effort to provide career education experiences for their students.

The interview was probably one of the most productive components of the Career Education Needs Assessment Study. It gave local school personnel a chance to vent thoughts on what they felt should be done in cooperation with the area school. Personnel from Area One were enlightened regarding what is currently being offered in local schools as well as future needs projected by local school administrators.

H. School Enrollment

The following enrollment and population data were compiled:

Actual enrollments for grades K-12 for the 1973-74 and 74-75 academic years are found in Table 11.

Actual enrollments for 1968-69 thru 1973-74 and projections for 1974-79 are given in Table 12.

Table 13 illustrates school district population by districts and counties.

Table 14 lists the private schools in Merged Area One and their student populations.

Map showing locations of public and parochial high schools is given in Table 15.

Table 16 provides information regarding Area One Vocational-Technical School enrollments from 1967-68 through 1972-73.

Pre-school population by school district is given in Table 17.

The enrollment and census data used to compile this table was provided by the local districts. Elementary and Junior High ungraded and special education pupils have been distributed equally through Grades K-8. Senior High ungraded, Special Education, and Post High pupils have been distributed equally through Grades 9-12.

45988 = Actual Enrollment Grades K-12 for the 1973-74 School Year.

47521 = Projected Enrollment Grades K-12 for the 1973-1974 School Year made by the Department of Public Instruct

3.33 = Percent of Error--Projection to Actual.

I. Dropout Analysis

An analysis of the school dropout profile was conducted because cooperative career education offerings may be an influential factor in determining whether a student stays in school. This information may also be relevant to the Area One Vocational-Technical School in terms of possible recruitment.

Information gathered from the Department of Public Instruction is listed in Tables 18-25.

There appears to be a positive relationship between school district population and percent of dropouts, with the larger schools having the most dropouts. Merged Area One is lower than the State average but Dubuque County exceeds the State dropout rate in both 1972 and 1973.

J. Social Agency Survey

Part of the Study was a questionnaire sent to all social agency employees within Merged Area One asking what they felt were the career education needs of their clients and how the Area One Vocational-Technical School could best serve their clients (Appendices 34 - 35). Thirty-seven responses were returned. Questions asked the social agency personnel and results follow:

1. What type of client do you deal with? Low income, underemployed, elderly, health aide and handicapped persons.

2. How in the past has Area One Vocational-Technical School been helpful to your clients? John Carver and Mavis Young very helpful. Offering of courses pertaining to health care, and other special classes relating to needs of the people. GED program, Main-Stream, and M.D.T.A. programs very helpful.

3. Of your clients benefiting from the Area One experience, what programs or services benefited them most? Family living, Clerical, Trade programs, Health, and "how to do" classes very beneficial. All of great need.

4. What services could Area One Vocational-Technical School offer to better accommodate your clients? Budgeting and consumer buying, financial assistance classes. Training facilities for mentally deficient, and teaching disabled citizens. Expand nursing program. Cooperation between Extension Office and Area One, resulting in non-duplication of programs.

5. Other Comments? Spread class to different locations, thus cutting down on transportation. Extension Home Economists to coordinate programs. Short term courses.

K. Population Needs Profile

The make-up of the population of Merged Area One is considered an integral part of this study. The Department of Public Instruction has compiled the following information from the 1970 Census concerning population characteristics of Merged Area One: Population Needs Profile; Individuals Receiving Public Assistance By Category; Number and Percentage of Low-Income Individuals; and Unemployment Data (Tables 26-31).

The reader can observe in terms of the collected data, that Area One has practically no minority population and an unemployment rate of 3.2% which is lower than the state average of 3.5%. Chickasaw and Howard counties experienced unemployment rates considerably higher (4.5% and 4.7%) than the State average (3.5%). Area One had a median family income of $7,828 and the State average was $9,018. The percentage of families below the poverty level was 11.4% in Area One while the State exhibited an 8.9% level.

According to the 1970 Census, an average of 40% of the Merged Area One population over 25 years of age have completed 8th grade but not high school. An average of 10% of the population over 25 have less than an 8th grade education. The average percentage of the Area One population over 25 years of age who have not completed high school is 50% (Table 32).

L. Post Secondary Vocational-Technical Offerings

The Area One Vocational-Technical School currently offers 22 preparatory vocational-technical programs at the North Center and 12 programs at the South Center (Table 33).

These program offerings become important in relation to student interest and labor demand data given elsewhere in this study. When alternatives are developed as a result of this study, the possibility or providing opportunities for high school students to enroll in given post secondary programs should be considered.

In addition, articulation linkages become important between post secondary offerings and secondary career education programs which may develop in the future.

With regard to future Area One post secondary offerings, the following projected preparatory career education programs are presently anticipated based upon CENIS labor demand data, as well as indications received from local surveys and advisory groups (not listed in terms of priority):

Food Distribution
Retail Marketing
Respiratory Technician
Legal Secretary
Medical Secretary
Electronics Technician
Heavy Truck Mechanic
Graphic Arts
General Machinist
Mechanical Technology
Industrial Equipment Mechanic
Marketing Management
OSHA Safety Technician

As a result of the Needs Assessment Study, the Area One Vocational-Technical School made the decision to explore the possibility of entering into joint agreement with local schools to make various career education offerings available.

Table 33

It was decided to experiment with a 90-hour Exploratory Cosmetology program during the Spring Semester of the 1974-75 school year. The program served 14 students, 7 from New Hampton Community Schools and 7 from Turkey Valley Community Schools.

While the Cosmetology course was in session, plans were made to explore other possible secondary career offerings needed in the merged area. Consequently secondary career planning groups were formed as follows:

Group 1

Howard Winneshiek
Notre Dame
Riceville
Decorah
South Winneshiek
North Winneshiek
New Hampton
Turkey Valley
Fredericksburg

Group 2

Allamakee
Eastern Allamakee
Postville
M-F-L
Mar-Mac
Central Elkader
Garnavillo
Guttenburg

Group 3

Fayette
North Fayette
Valley of Elgin
West Central
Oelwein
Starmont
West Delaware
Edgewood-Colesburg
Maquoketa Valley

Group 4

Western-Dubuque
Beckman
Leo
Acquin
Dubuque
Wahlert

The objectives of these meetings were to (1) determine cooperative needs in relation to possible programming; (2) determine facilities based on availability; and (3) determine methods of finance.

The minutes of the four group meetings are attached in appendices 36, 37, 38, and 39.

Summary of Suggested Cooperative Curriculum Areas
by Interested Schools

Cosmetology (5)	Fredericksburg, Turkey Valley, New Hampton, Howard Winneshiek and South Winneshiek
Health Occupations (7)	Fredericksburg, Turkey Valley, New Hampton, Howard Winneshiek, South Winneshiek, Dubuque, West Dubuque, West Central, Starmont, Maquoketa Valley, West Delaware, North Fayette, Edgewood-Colesburg, Guttenburg, Mar-Mac, Eastern Allamakee, and M-F-L
Distributive Education (2)	South Winneshiek and Turkey Valley
Carpentry (15)	Fredericksburg, Turkey Valley, New Hampton, Howard Winneshiek, South Winneshiek, Riceville, West Central, Starmont, Maquoketa Valley, West Delaware, North Fayette, Edgewood-Colesburg, Garnavillo, M-F-L, and Postville
Auto Mechanics (17)	Fredericksburg, Turkey Valley, New Hampton, Howard Winneshiek, South Winneshiek, Riceville, Dubuque, West Dubuque, West Central, Starmont, Maquoketa Valley, West Delaware, North Fayette, Edgewood-Colesburg, Guttenburg, M-F-L, and Postville
Agriculture Education (4)	Turkey Valley, Dubuque, Western Dubuque, and Eastern Allamakee
Advanced Accounting (1)	Garnavillo
Food Preparation (1)	Garnavillo
Advanced Foreign Language (1)	Guttenburg
Ecology (1)	Guttenburg
Child Care (1)	Mar-Mac

As a result of the group meetings described earlier, two classes are scheduled to begin in the fall of 1975 serving approximately 70 students. A Building Construction preparatory course will be conducted in cooperation with Edgewood-Colesburg, Maquoketa Valley and Starmont Community Schools. A duplex structure will be built in Edgewood with students in Maquoketa Valley and Starmont traveling to Edgewood.

An exploratory Agriculture course will be offered at Eastern Allamakee and Turkey Valley Community Schools. To make this possible, Area One instructors will offer instruction in the facilities of the two participating schools. Neither the Eastern Allamakee Community School District or the Turkey Valley Community School District has an agricultural course within their school curriculum.

The Area One Vocational-Technical School has made an effort to remain sensitive to the needs of special interest groups in regard to the establishment of joint secondary career education offerings. (Appendix 40)

It is felt that both courses will be meeting needs that are not currently being met by the participating schools. It is anticipated that preliminary work will be done during the 1975-76 academic year to identify additional joint offerings needed in Merged Area One, depending upon the interest and requests from respective local community schools.

M. Alternative Methods of Attempting to Meet Identified Needs

Determining methods of meeting the career education needs of students within Merged Area One was one of the prime objectives of the study.

Throughout the study, meetings were held with key community school administrators and an assessment of their thoughts on alternative methods of meeting career education needs was conducted. Suggested alternatives along with possible advantages and limitations follows:

(1) Make it possible for high school students to slot into the regular full-time classes on the Area One campuses at Calmar and Dubuque. This could be accomplished during prime time (8:15 to 3:15) or at the conclusion of the regular Area One Vocational-Technical day. It was suggested that students take a block of course work that would be transferable if they wish to attend Area One or another area school in Iowa upon completion of their high school program.

Advantages

A. There would be certified instructors teaching preparatory programs. Existing facilities might be available during the regular school day.
B. Facilities and equipment would be available without additional purchases.
C. Course credit might be more transferable.

Limitations

A. The shop facilities at the Area One Vocational-Technical School are heavily used during prime time (8:15 - 3:15).
B. During prime time, the Area One instructors are teaching a full load.
C. Only sixteen of thirty-two high schools in Area One would be within 30 miles of the two present attendance centers.
D. Students would be limited to courses already being offered at Area One Vocational-Technical School.

(2) Purchase mobile vans to travel Area One, furnished with the necessary materials and equipment to offer preparatory or exploratory courses. The thought behind this suggestion was that this would eliminate extensive student travel and that all school districts would, at some time, have available to their students the same curricular offerings as other schools. It would be fairly equitable. This particular suggestion was popular with small schools on the edge of the merged area who envisioned a great deal of travel with any cooperative plan. Auto Mechanics, Machine Shop and Data Processing were the three subject areas mentioned in a discussion of this alternative plan.

Advantages

A. The mobile van would periodically get within a reasonable distance of each school in Merged Area One.
B. Should avoid duplication of expensive equipment purchases by the local schools.

Limitations

A. The expense of equiping and operating the vans might be unrealistic.
B. Depending upon the number of vans in use, it may be a considerable length in time before each section of the area would have a particular subject area in their location.

(3) The suggestion was made that Area One instructors would serve local community schools as consultants to local instructors teaching in the same vocational area. The thought was that the local high school instructors, in many cases, may not have sufficient occupational background in the subject taught. With periodic consultations and demonstrations, an on-going inservice program could be established with high school students profiting from the plan.

Advantages

A. Experts in the field could serve as consultants to instructors who have less occupational experience.
B. No student travel involved.
C. It would not necessarily be an expensive program.

Limitations

A. The assistance provided would be limited to the occupational background of instructors presently employed at Area One.
B. The consultant's time might be inadequate if all the high schools requested said consultative services.

(4) One of the most popular suggestions was the employment of a Career Education Consultant to serve the local school districts. This person would help the local school develop short- and long-range plans for career education curricula on a K-12 basis. This suggestion was prompted by a felt need expressed by local administrators to offer career education experiences on a K-12 basis and also to meet Department of Public Instruction guidelines.

Advantages

A. This individual could help local administrators develop guidelines in implementing career education curricula on a K-12 basis.
B. Distributed over the merged area the cost might be quite reasonable.

Limitations

A. This alternative would not provide an preparatory experiences for the secondary student.

(5) The possibility of establishing several career centers within Merged Area One was discussed at length. These centers would be situated geographically to serve several school districts with minimal student travel. The centers might be located in structures independent of local schools or possibly housed in existing facilities of specific local school districts. The participating schools would determine the courses offered at each center with the emphasis placed on courses not presently offered at the community school.

Advantages

A. With the establishment of several centers, most schools would have the opportunity to participate.
B. The participating schools would determine the curriculum offered.
C. The centers would be established at centralized locations in order to cut down extensive student travel.
D. Where necessary the centers would be established apart from a local high school so as not to disrupt scheduling and facility usage within that school.
E. The alternative would be financially desirable to many local schools in that they would not have to hire a full-time instructor for a limited number of students.
F. Students enrolled in preparatory courses would be taught by an occupationally-experienced individual.

Limitations

A. Student travel to the designated center would be required.
B. A quota might be necessary which would limit the number of students attending from each school.

IV. Limitations

It became apparent that a need exists to better define "exploratory" and "preparatory" terms due to confusion experienced during the study.

While the study presents certain information relative to career education needs, the delivery system to meet these needs remains to be identified.

Preparatory career offerings are frequently not offered at the secondary level due to financial considerations and the study did not attempt to identify the adequacy of present funding support for such offerings.

V. Dissemination of Study

Participating school districts and social agencies in Merged Area One will be provided with copies of this document. Additional copies will be available from the Department of Public Instruction, Career Education Division, Des Moines, Iowa.

VI. Conclusions

The Study suggests a need for more career education offerings for school districts located within Merged Area One. A tremendous amount of interest was exhibited by local school administrators in the possibility of offering expanded career education experiences to their students on a cooperative basis. The prevailing attitude was to "do the best we can afford for the kids."

As a result, the Area One Vocational-Technical School has assumed responsibility as a facilitator for implementation of a cooperative secondary career education project. A proposal was written and presented to Area One Superintendents in September of 1974.

It appears that, at the time of this writing, there will be a cooperative offering of career education experiences to secondary students in Area One beginning March 1975 on a limited basis; and on September 1975 several vocational centers may be established throughout Merged Area One.

TO: Area One Superintendents

SUBJECT: Area One Career Education Coordinating Committee Report

The Area One Career Education Coordinating Committee met Monday, October 29, 1973, at Starmont to discuss a proposed Area One study of career education needs in the twenty-seven school districts comprising the Area One District. Members in attendance at the meeting included Superintendents Ramon Green, Wayne Burns, Garland Wessels, Loren Englund, and Max Clark. Also present were Arden Johnston, Noel Koranda, and Darwin Schrage.

It was announced that the K-Adult Career Education planning grant, previously reviewed by committee members, was approved for implementation by the Department of Public Instruction. The study is projected to be underway by mid-November 1973 and completed June 30, 1974. The primary objectives of the planning study are summarized below:

1. Assess current career offerings at all levels, K-Adult.

2. Identify career education needs K-Adult.

3. Determine appropriate delivery system to meet identified needs.

In addition to providing information needed in the study, it is felt that the investigation may provide useful information to each individual district. Arrangements are being made for consultative services with one of the state universities for the purpose of gathering and analyzing needed information. An advisory committee is being organized which will include individuals from the following categories: school districts, business and industry, referral agencies, and agriculture. A meeting of the advisory committee will be held in the near future to review the planning study prior to implementation.

If this study is to be meaningful, a great deal of cooperation will be needed on the part of everyone involved. Each school district will be asked to provide information for this study. If you wish additional details, please contact me at your convenience.

Max R. Clark
Chairman

Four-part K-12 Career Education Attitude Inventory

Does the school provide:

1. activities which help students develop a healthy value system.
2. activities which help students develop positive feelings about themselves.
3. activities which help students develop vocational interests.
4. activities that helped students in choosing careers in line with their own abilities, interests, and goals.
5. activities which help students learn to make proper use of their leisure time.
6. activities which help them learn about the world of work.
7. activities which help students develop positive attitudes toward work.
8. activities which teach students to appreciate the dignity and value of work.
9. activities which help students understand the economic nature of the nation.
10. activities which help students plan careers.
11. activities which help students select careers.
12. activities which help students learn about the relationship between education and work.
13. activities which help students learn skills that they will be able to use in their chosen careers.
14. a satisfactory variety of vocational courses leading to employment.

MID CAREER EDUCATIONAL NEEDS SURVEY

1. Your age ___ Sex ___ Marital status ___ Single ___ Married ___

2. Are you presently employed? ___ Yes ___ No Are you retired ___ Yes ___ No
If no, go to question #13.

3. Did you graduate from high school ___ Yes ___ No
If no, state highest grade completed ___

4. Did you attend: (Check those that apply)
2 year college ___ vocational-technical school ___
4 year college ___ business and industry school ___
trade school ___ military school ___

5. Exact title or name of job you now hold _____

6. Name of employer _____

7. Hours you work per week ___

8. Number of years employed at present job:
Under 1 year ___
1-5 years ___
6-10 years ___
11-20 years ___
Over 20 years ___

9. In your present position, were you trained at: (check one)
a college ___ vocational-technical school ___
trade school ___ business and industry school ___
military school ___ none ___
How long were you trained for present position:
No specific training ___ 2 years ___
2 months ___ 3 years ___
6 months ___ 4 years ___
1 year ___ Over 4 years ___

10. How many jobs have you held in the past 10 years? ____ (the number)

11. Are you basically satisfied with your present job..all things considered:
___ Yes ___ No If no, please check reason, 1. Financial ___, 2. Dull Job ___, 3. Promotion Opportunities ___, 4. Other _____

12. What would you like to do if you could change jobs? _____
_____

13 If you had the opportunity for additional training, what are the main areas or items you would like to receive training in? _____
_____
Would you be willing to attend evening classes. ____
Full term day classes. ____

14. If you could change jobs, would you rather be employed:
___ In another part of Iowa ___ On the West Coast
___ In the Midwest-outside Iowa ___ On the East Coast
___ In the South ___ In the Southwest
___ Present Area ___ Foreign Country

TO: Local Adult Education Coordinators

FROM: Noel Koranda
Area I Vocational-Technical School

RE: Career Education - Adult Education Survey

Area One Vocational-Technical School has been awarded a grant from the Department of Public Instruction to assess the needs of the residents of Area One in terms of Career Education.

The study will include data collection on enrollment, finances, employment needs, student needs and a variety of questionnaires to students, teachers, administrators, parents, businessmen and local citizens.

Part of the study is what we call a Mid-Career Educational Needs Survey in which we would like to determine the employment needs and desires of individuals in a middle-age composite.

Could we have your cooperation in distributing these forms to the respective Adult Education teachers in your school district for completion by their adult students? It is anticipated that the information from the Mid-Career Educational Survey will be helpful in future Adult Education planning as well as being a part of the Career Education Study.

We have enclosed a stamped, self-addressed envelope for your convenience in sending back the completed forms.

Thank you for your cooperation!

I. SUMMARY OF THE CENIS LABOR DEMAND SURVEY

The Career Education Needs Information System (CENIS) Labor Demand Survey was conducted during the late summer and fall of 1972 and culminated during the first quarter of 1973. Years of planning efforts on the part of individuals and agencies have preceded this cooperative effort to collect comprehensive statewide and area labor demand data directly from Iowa's employers.

A. Selection of Employers

1. An employer inventory was developed, including these components: (a) a listing from Iowa Employment Security Commission of all employers of four or more, subject to unemployment insurance regulations; (b) supplemental listings including nursing homes, custodial homes, hired farm workers, federal, state, county, and municipal governments, school districts, and establishments headquartered out of state with branches in Iowa. Employers were classified according to the Standard Industrial Classification system, and an occupational/industrial matrix was developed.

2. From the complete employer inventory, a representative sample was drawn for each of the 15 merged areas based on firm size, types of industries, and other statistical sampling techniques applied by the Iowa State Statistical Laboratory. Approximately 5,600 firms were sampled statewide, with area sample sizes ranging from 180 in Area IV, Sheldon to a high of 815 in Area XI, Des Moines.

B. Selection of Occupations

1. Several qualifications were applied to the choice of occupations to be included in the survey:

   a. Only those occupations requiring less than a baccalaureate degree were considered.

   b. Occupations currently being taught in area school or secondary school occupational training programs were included.

   c. Both declining and emerging occupations were selected, to the degree that they could be identified.

2. Tentative lists of occupations were developed and reviewed by DPI consultants, vocational-technical directors at secondary and area schools, and by such outside expert groups as the Iowa Development Commission, Employment Security Commission, Master Builders of Iowa, Center for Industrial Research and Service, Agricultural Education Department at Iowa State University, and similar groups.

3. Approximately 300 occupations were included in the final listing, ranging in skill level from low-training time occupations such as waitress to extremely technical jobs as exemplified by the Industrial Hygienist.

C. Survey Implementation

1. Employer Pre-Notification: News releases explaining the purpose and methods of the survey were prepared and disseminated to all pertinent employer organizations, with the request that appropriate articles be published in the associations' newsletters or house organs, for endorsement purposes, and to inform members of the pending survey.

2. Each of the fifteen merged area schools designated an individual to function as the survey coordinator for that institution and also assigned a sufficient number of staff members as interviewers to insure personal contact with each employer in the area sample.

3. Each participating employer received letters of notification of his selection in the area sample. The area school superintendent sent the notification and enclosed letters co-signed by the State Superintendent of Public Instruction and the Director of the Iowa Development Commission.

4. The survey instrument utilized was adapted from questionnaires previously used successfully in similar surveys. Eighteen categories of occupations were developed from the occupational-industrial matrix and pre-printed questionnaires were prepared accordingly, to minimize the number of questionnaires which one given employer would review.

5. Area school personnel personally interviewed each employer in the sample, obtaining general information for the Employer Data Sheet (type of business, total number of employees, etc.) and specific occupational details on the questionnaires.

6. Completed questionnaires were batched by the Area coordinators and dispatched to the Department of Public Instruction for hand editing and subsequent forwarding to the Iowa State Statistical Laboratory.

D. Analysis and Processing of Survey Results

1. Classification of survey entries: Entries on the survey instrument were classified according to Dictionary of Occupational Titles (DOT) codes and titles. In order to render the results more meaningful to educators, conversion tables were developed, relating DOT classification to Office of Education (OE) taxonomy titles and codes.

2. Responses from each area were examined and sample weights were assigned, taking into consideration the number and size of negatively-responding firms (out-of-business or refused to participate) and relating these data to the positive (usable) responses in building estimates for each survey entry.

3. After area and statewide estimates were established, various arrangements of data were developed in print out form, to serve as the base for further in-depth study and dissemination of survey results and implications.

E. Aids to Interpreting Survey Results

1. The following data-related factors should be recognized and considered when reviewing survey data.

a. Employer Exclusions

Although this survey is by far the most comprehensive inclusive investigation ever attempted in Iowa, certain exclusions still existed, as follows:

1. Farmers (farm owner-operators) were not included. Data from Iowa State University's Farmer Replacement Study will eventually be plugged into CENIS.

2. Self-employed workers were omitted unless they had voluntarily elected unemployment insurance coverage.

3. Some small employers (1-3 workers) were excluded, although over 4,500 of these firms had voluntarily elected to provide unemployment insurance for their workers and thus were encompassed by the survey.

4. Railroad workers were not included in the survey.

b. Data Collection Procedures

1. Time Frame -- Due to unforeseen problems and delays, data collection time ranged from July, 1972, to March 1973.

2. Data Collecting Staff

Workshops were held for the 15 area coordinators and for a minimum of two interviewers from each school. However, few, if any, of the interviewers possess prior interviewing experience.

3. Employer Participation

a. In most instances, each employer in the area sample was contacted by an area school representative and an Employer Data Sheet (name of firm, type of business, person contacted, total number of employees, etc.) was completed.

b. If the employer agreed to participate, the appropriate questionnaire(s) were completed.

c. If the employer declined to participate or if the firm was out of business or could not otherwise be located, this information was noted on the Employer Data Sheet to identify the nonrespondents and assist in weighting the sample when developing the employment estimates.

c. Quality of Employer Responses

1. The validity and reliability of employer responses were limited by two major factors: (1) their ability and (2) their willingness to predict future employment patterns in the surveyed occupations represented in a given employer's firm.

2. Many employers tended toward straight-line projections, indicating no significant change in employment anticipated during the time periods encompassed in the survey.

3. Larger employers, with more sophisticated planning sections, were more willing to make significant long-range predictions of work force changes.

4. Employer projections are always affected by economic factors, present or anticipated, which might influence their predictions, depending upon whether their outlook was pessimistic or optimistic at the time they were contacted.

2. Highlights from the CENIS Labor Demand Survey Results

a. More than 5,000 employers were contacted statewide.
b. Current statewide employment totaled 210,845.
c. Total statewide demand for 1973 equaled 32,287.
d. Total demand for 1975 was 49,817.
e. Total demand for 1977 was 60,885.
f. Survey estimates indicate an overall expansion rate of 12 percent for all surveyed occupations between 1972 and 1977.

II. SUMMARY OF THE CENIS LABOR SUPPLY SURVEY

Information on labor supply is confined to an indication of the number of individuals being prepared for work in the occupations encompassed in the CENIS investigation.

A. Sources of Supply

1. Career Education Trainees

Enrollment information for this section was extracted from the CE-4 files. Neither total enrollment nor estimated completions was used to indicate supply, since a fairly large number of program completions and terminations do not enter the field for which they were trained. In order to arrive at a more realistic estimate of anticipated supply, the placement ratio from the latest follow-up report was applied against the enrollment figure, e.g., if 2,000 students were enrolled and the placement ratio was 66 percent, a Career Education supply projection of 1,320 would be indicated. The total Career Education supply figure for all occupational areas for FY 1973 was 19,835.

2. Private Business and Industry Training

Data for this supply facet were extracted from the Labor Demand Survey. Employers contacted were asked to identify the numbers of workers enrolled in a formal (80 hours and up) training program for each occupation surveyed. Ninety-four (94) such trainees were identified.

3. MDTA Trainees

This information was obtained from records maintained by the MDTA units in the Department of Public Instruction and in the Iowa Employment Security Commission. A total of 321 MDTA trainees was included in the current survey.

4. Private School Trainees

Private schools offering occupational programs are surveyed annually to ascertain the number of enrollees and estimated completions for each occupation being investigated. In the current survey, 120 different private schools were contacted by mail, with 97 organizations responding. Follow-up contacts to identify out-of-business or otherwise inappropriate schools has reduced the number of contacts to 104. In the FY 1973 survey, a total of 6,637 private school enrollees were identified with 4,005 estimated completions indicated. Of this total, 2,659 private school students were included in the CENIS Labor Supply structure.

5. Total Supply

Data indicated here reflect the sum of the four supply components. The FY 1973 survey identified a total labor supply (occupational program trainees) of 22,909. No distribution of labor supply information has been made.

III. SUMMARY OF THE CENIS STUDENT INTEREST SURVEY

The CENIS Student Interest Survey was conducted early in calendar year 1973 on a sampling basis. Highlights of this survey include:

A. Development of Sample

The CENIS Student Interest Survey was designed to sample the occupational interests of approximately 15 percent of Iowa's eleventh and twelfth grade students. Each of the 15 area schools and community colleges coordinated the survey within its merged area. Statewide, 123 public and 15 private school districts participated with approximately 150 different high schools involved. Totally, 17,865 students were surveyed from a total population of 102,485, for a sample of slightly over 17 percent.

In establishing the sample, schools with junior-senior enrollments of 300 or more were randomly sampled within. Schools with less than 300 eleventh and twelfth graders were selected randomly. All juniors and seniors attending those schools were surveyed.

B. Occupational Areas Encompassed

Occupations surveyed corresponded with those encompassed in the CENIS Labor Demand Survey, but the coverage also included many professional occupations (requiring at least a baccalaureate degree). Students responded to a total of 206 occupational areas, divided into nine categories. The first entry in each category allowed the respondent to select a broad occupational area, while subsequent entries permitted more specificity. For example, in the category "Agriculture and Conservation Occupations," a broad area of "General Agriculture or Conservation Worker" is available, while more specific occupations such as "Farm Manager" or "Forester" also are furnished for the students with more well defined occupational choices. Space was provided for the student to write in other occupational choices not included on the list.

C. Other Information Gathered

In addition to first and second occupational choices, students also were asked to indicate the certainty of their first choice (very sure, fairly sure, not sure) and to identify their immediate plans after high school (full-time employment, military service, less than 4-year college, 4-year college/university, or none of these).

D. Survey Results

Both sample numbers and projected numbers are reflected for both the area and statewide reports. The sample number was derived by summing probability weights, based on the degrees of certainty of first and second choices. Weights were assigned so that the number represents actual individuals interested in the occupation.

The five most popular vocational areas selected and the statewide projected number of students interested were: (1) Secretaries, (2) Agricultural Production, (3) Transportation (primarily truck drivers), (4) Automotive Mechanics, and (5) General Merchandise (sales occupations).

Print outs of survey results have been delivered to each area school.

IV. SUMMARY OF THREE-YEAR FOLLOW-UP SURVEY

A. Design of Survey

This survey was designed to elicit statistical and attitudinal information from former vocational students at a period three years after they had left (completed or withdrawn from) the program. An advisory committee was organized with representatives from secondary and postsecondary schools, vocational programs, guidance and counseling activities, and private industry.

B. Survey Instrument

Follow-up surveys from other states were examined, various ideas adapted, and the resulting rough draft refined by the committee--then further modified after the field test.

C. Survey Implementation

A field-test survey was conducted early in 1972, with one high school (Perry) and one area school (Western Iowa Tech in Sioux City) participating. Subsequently, additional revisions were made to the instrument (a card-form, self-mailing device). Seven secondary school districts (Cedar Rapids, Des Moines, Correctionville, Humboldt, Saydel, South Winneshiek, and Villisca), and five area schools (Area VI, Marshalltown; Area VII, Waterloo; Area IX, Davenport; Area XIII, Council Bluffs; and Area XVI, Burlington) were selected to further pilot test the instrument and techniques. Coordinators were named for each participating school district and area school. Pilot schools were selected to obtain representation according to size and location. Surveys were conducted during the period from December, 1972, through February, 1973.

D. Survey Response

From 2,348 possible contacts, 1, 140 responses were received for an overall response rate of 49 percent, 438 of 870 secondary students responded for a rate of 50 percent, while 702 of 1,478 postsecondary responses were received for a 48 percent response rate. The highest individual response was 90 percent for a very small high school, while the lowest rate was 33 percent for a medium sized area school.

E. Survey Results

Processing of the pilot test questionnaires has not yet been accomplished by the Iowa State Statistical Laboratory. Future plans for this CENIS component will depend upon the analysis of the follow-up results.

V. DEVELOPMENT OF THE CENIS INTERFACE

A. Composition of the Interface

Data resulting from the four CENIS components have been processed by the Iowa State Statistical Laboratory and correlated to form an interface of pertinent information for each occupational area. Two versions of the CENIS Interface were developed, with print outs for each merged area and a statewide composite available for each report.

1. Interface Arranged by Taxonomy Order

Interface results are presented by taxonomy area, with one taxonomy often encompassing several specific DOT occupations. This arrangement was necessary because enrollments in career education are reported only by taxonomy number.

2. Interface Arranged in Descending Order by Net Demand

Taxonomy areas are presented in descending order according to net demand (labor demand for 1975 minus the total supply).

3. Highlights of Interface Report

a.	Total Labor Demand	49,817
b.	Total Labor Supply	22,909
c.	Total Net Demand	26,908
d.	Total Student Interest in occupational areas encompassed by CENIS	54,001
e.	Percentage of vocational students completing program	76%
f.	Percentage of former students available for work, employed in the occupation for which trained or a related occupation	53%
g.	Percentage of former vocational students continuing their education	18%

RE: Career Education Needs Survey

Area One Vocational-Technical School is presently conducting a Career Education Needs Survey throughout Merged Area One. One of the components of the study is a curriculum analysis by school district.

An advisory committee meeting was held to provide input into the curriculum analysis. Those attending were:

Lee Arrowsmith	South Winn - Calmar
Craig Paul	Starmont - Strawberry Point
Bill Peck	Hempstead - Dubuque
Urban L. Langer	Wahlert - Dubuque
L. J. Guter	Wahlert - Dubuque
Darwin Schrage	Area One - Calmar
Noel Koranda	Area One - Calmar

Enclosed you will find a copy of the high school courses offered at your school. We need to determine which courses offered at your school you consider to be vocational. With the help of the advisory committee, we defined vocational courses as "those courses, or series of courses, designed to provide job-entry skills (Or qualifications) leading to gainful employment upon graduation".

Keeping in mind the definition of a vocational course, please number each vocational course in the following manner:

Category	Number
Ag Occupations	1
Distributive Occupations	2
Health Occupations	3
Home Economics	4
Office Occupations	5
Trades & Industrial	6
Other Vocational	7

For example: If the course is called Clothing and Textiles it probably would be marked 4. Please number only the vocational courses at your school.

If you have any questions, please call 319-562-3263, Ext. 36, Noel Koranda.

TO: Social Agency Personnel
Merged Area One

Area One Vocational-Technical is presently conducting a Career Education Needs Survey. One of the components of the study is to survey the Social Agencies within Area One in regard to their Career Education needs. We have developed the attached questionnaire which will give you an opportunity to express your views on what Area One has done for your clients and also what you would like to see Area One doing in regard to your clients.

Thank you for your contribution!

Sincerely,

Noel Koranda

MINUTES

Secondary Career Planning Group Meeting
Area One Vocational-Technical School
Administration Building
Calmar, Iowa

February 17, 1975
1:00 p. m.

The following individuals were present:

Gerald Linder	Principal	Fredericksburg
Ronald Donn	Principal	Turkey Valley
Milt Krumm	Principal	New Hampton
Larry Fain	Counselor	New Hampton
Wayne Kreitzer	Counselor	Crestwood
Dennis Brosdahl	Principal	Crestwood
Alvin Leuthauser	Superintendent	Howard-Winneshiek
Loren Englund	Superintendent	South Winneshiek
Lee Arrowsmith	Principal	South Winneshiek
Erlin Womeldorf	Counselor	South Winneshiek
Donald Morasch	Counselor	Riceville
Max Clark	Superintendent	Area One Vocational-Technical School
Darwin Schrage	Asst. Supt.	Area One Vocational-Technical School
Noel Koranda	Adm. Asst.	Area One Vocational-Technical School

Absent were representatives from Decorah and North Winneshiek.

After a welcome and opening remarks by Superintendent Clark, Noel Koranda gave a brief overview of the Career Education Needs Assessment Study, Phase I, involving Cosmetology in Decorah, and the proceedings of the Area One Superintendents Committee on Career Education.

Mr. Koranda gave an explanation of the Interest Survey that was recently administered to 10th and 11th graders in Area One. Results of the survey were distributed.

Mr. Koranda reviewed the Satellite Center Concept of serving high school students cooperatively between the local Community School and the Area Vocational School.

Mr. Schrage went into detail concerning the financing of Satellite Centers. An estimated cost of $460.00 per student per year for a two-hour block daily was used. It was determined that the local school district would have to pay the $460.00, but would be able to be reimbursed from the State of Iowa around $250.00 for the first year. March 15, 1975 was the date announced for getting the CE4 (financial data request) into the Department of Public Instruction.

Those attending the meeting brought up the following areas in which they would be interested in participating beginning September, 1975:

Cosmetology	(Preparatory Emphasis)
Health Occupations	(Preparatory and Exploratory Combination)
Distributive Occupations	(Preparatory)
Carpentry	(Preparatory)
Auto Mechanics	(Preparatory)
Agriculture Education	(Exploratory)

Note:

Almost all schools present expressed an interest in Cosmetology, Health Occupations, Carpentry, and Auto Mechanics, while Distributive Education seemed to be of interest only to South Winneshiek and Turkey Valley. Turkey Valley expressed interest in Agriculture Education.

Howard-Winneshiek expressed a concern about the scheduling difficulties for next fall.

New Hampton emphasized the importance of making the Phase I Cosmetology Program in Decorah a meaningful experience so the students would not become disinterested in the program.

Articulation with the Satellite Centers and Area One Vocational-Technical full-time programs was discussed. Hopefully students will be able to attain advance standing in Area One full-time programs. This is being studied at the present time by the Area One Staff.

School liability for transportation was discussed.

It was decided to keep the members of the group informed as to the outcome of the other group meetings to be held.

The meeting adjourned at 3:00 p.m.

Respectively submitted,

Noel Koranda
Recording Secretary

Appendix 37

MINUTES

Secondary Career Planning Group Meeting
Western Dubuque High School
Administration
Epworth, Iowa

February 18, 1975
10:00 a.m.

The following individuals were present:

Dr. Arden Johnston	Secondary Education	Dubuque
Wayne Drexler	Superintendent	Western Dubuque
Ralph Buchman	Principal	Western Dubuque
Dr. Art Huinker	Curriculum	Western Dubuque
Max Clark	Superintendent	Area One Vocational-Technical School
Darwin Schrage	Asst. Supt	Area One Vocationa-Technical School
Noel Koranda	Adm. Asst.	Area One Vocational-Technical School

After a welcome and opening remarks by Superintendent Clark, Noel Koranda gave a brief overview of the Career Education Needs Assessment Study, Phase I, involving Cosmetology in Decorah, and the proceedings of the Area One Superintendents Committee on Career Education.

Mr. Koranda reviewed the Satellite Center Concept of serving high school students cooperatively between the local Community School and the Area One Vocational School.

Mr. Schrage went into detail concerning the financing of Satellite Centers. An estimated cost of $460.00 per student per year for a two-hour block daily was used. It was determined that the local school district would have to pay the $460.00, but would be able to be reimbursed from the State of Iowa around $250.00 for the first year. March 15, 1975 was the date announced for getting the CE4 (financial data request) into the Department of Public Instruction.

Those attending the meeting brought up the following areas in which they would be interested in participating beginning September, 1975:

Agriculture	(Preparatory Emphasis)
Health Occupations	(Preparatory Emphasis)
Auto Mechanics	(Preparatory Emphasis)

Note:

Western Dubuque indicated an interest in sending students to an Agriculture program that would be an extension of their regular Agriculture program now in existence. Dubuque Community also felt they could supply students to such a program.

Western Dubuque expressed interest in Health Occupations in cooperation with the Dyersville Hospital.

Both Western Dubuque and Dubuque Community have Auto Mechanics now, so the Satellite Program would be an extension of the regular program now being offered.

It was agreed that the program should start on a smaller scale and build from there. Hopefully, some utilization of the proposed Area One Vocational-Technical South Center Campus would be a reality for these two schools.

It was decided that the community schools would make contact with the parochial schools in their area and work out concerns regarding shared time, etc.

The meeting adjourned at 11:45 a.m.

Respectfully submitted,

Noel Koranda
Recording Secretary

MINUTES

Secondary Career Planning Group Meeting
Starmont Community High School

February 18, 1975
1:00 p.m.

The following individuals were present:

Allen Edwards	Superintendent	West Central-Maynard
Dr. Ramon Green	Superintendent	Starmont
John Thomas	Superintendent	Maquoketa Valley
Fred Eyres	Counselor	Maquoketa Valley
Jim Goodman	Principal	West Delaware
Blair Beatty	Counselor	West Delaware
Don Stevenson	Co-op Coordinator	West Delaware
Gale Severson	Counselor	Starmont
James Boelman	Counselor	North Fayette
Don Mueller	Superintendent	North Fayette
Steve Story	Principal	North Fayette
Craig Paul	Principal	Starmont
Harold Overman	Superintendent	Edgewood-Colesburg
Max Clark	Superintendent	Area One Vocational-Technical School
Darwin Schrage	Asst. Supt.	Area One Vocational-Technical School
Noel Koranda	Adm. Asst.	Area One Vocational-Technical School

Absent from the Group Meeting were representatives from Fayette, Valley of Elgin, and Oelwein.

After a welcome and opening remarks by Superintendent Clark, Noel Koranda gave a brief overview of the Career Education Needs Assessment Study, Phase I, involving Cosmetology in Decorah, and the proceedings of the Area One Superintendents Committee on Career Education.

Mr. Koranda gave an explanation of the Interest Survey that was recently administered to 10th and 11th graders in Area One. Results of the survey were distributed.

Mr. Koranda reviewed the Satellite Center Concept of serving high school students cooperatively between the local community school and the Area Vocational School.

Mr. Schrage went into detail concerning the financing of Satellite Centers. An estimated cost of $460.00 per student per year for a two-hour block daily was used. It was determined that the local school district would have to pay the $460.00, but would be able to be reimbursed from the State of

Iowa around $250.00 for the first year. March 15, 1975 was the date announced for getting the CE4 (financial data request) into the Department of Public Instruction.

Those attending the meeting brought up the following areas in which they would be interested in particpating beginning September, 1975:

Auto Mechanics	(Exploratory)
Construction Cluster	(Exploratory and Preparatory)
Health Career	(Exploratory)

The following suggestions were made in addition to specific course offerings:

The employment of a resource person to travel from school to school assisting with development of the career education concept.

Implement a Broadcasting-Newspaper course at Area One in a full-time capacity.

All schools present at the meeting expressed an interest in an Alternative School concept for students who are not able to cope with the regular classroom.

The meeting was adjourned at 2:45 p.m.

Respectfully submitted

Noel Koranda
Recording Secretary

MINUTES

Secondary Career Planning Group Meeting
Postville Community High School

February 28, 1975
1:00 p.m.

The following individuals were present:

Eldean Drewes	Principal	Postville
Vera Ebert	Counselor	Eastern Allamakee
Mike Fitzgerald	Counselor	Decorah
Joe James	Counselor	M-F-L
Harlan Strampe	Counselor	Central Elkader
Don Grove	Principal	Central Elkader
Jerry Siegrist	Counselor	Allamakee
D. J. Koopman	Counselor	Postville
Jack Dillon	Counselor	Granavillo
Bev Rutledge	Counselor	Mar-Mac
Dale Floyd	Counselor	North Winneshiek
Barry Shea	Counselor	Guttenberg
John Soloman	Superintendent	Guttenberg
Jay Fishback	Principal	Guttenberg
Darwin Schrage	Asst. Supt.	Area One Vocational-Technical School
Max Clark	Superintendent	Area One Vocational-Technical School
Noel Koranda	Adm. Asst.	Area One Vocational-Technical School

Noel Koranda opened the meeting with a brief overview of the Career Education Needs Assessment Study, Phase I, involving Cosmetology in Decorah, and the preceedings of the Area One Superintendents Committee on Career Education.

The 10th and 11th grade interest survey results were distributed with interpretations.

The satellite center comcept of serving high school students cooperatively between the local Community School and the Area Vocational School was discussed.

Mr. Schrage went into detail concerning the financing of satellite centers. An estimated cost of $460.00 per student per year for a two-hour block daily was used. It was determined that the local school district would have to pay the $460.00, but would be able to be reimbursed from the State of Iowa around $250.00 for the first year. March 15, 1975 was the date announced for getting the CE4 (financial data request) into the Department of Public Instruction.

Those attending the meeting brought up the following areas in which they would be interested in participating beginning September, 1975:

Garnavillo: Building Trades, Business, Food Preparation and Child Care and Guidance

Guttenberg: Auto Mechanics, Nursing Assistant Aid, Advanced Foreign Language, Ecology, and Athletic Training Course.

Mar-Mac: Nursing Aid, Health Occupations, and Child Care

Eastern Allamakee: Nursing Aid and Agriculture

M-F-L: Auto Mechanics, Carpentry, and Health

Postville: Auto Mechanics and Carpentry

Guttenberg brought up the suggestion of the area school possibly operating an entire class of Auto Mechanics from one school. The idea of working a cooperatively-sponsored program with industry was also mentioned.

The question of certification of instructors was discussed in regard to regulations of the Iowa High School Athletic Association.

The meeting adjourned at 3:00 p. m.

Respectively submitted,

Noel Koranda
Recording Secretary

Appendix 40

Northeast Iowa Area D.E. - O.E. Meeting

June 5, 1975

A meeting was held on June 5 at Humphrey Dairy, West Union with DE and OE instructors from several northeast Iowa high schools and Area One personnel. Those present included Mr. Sanders (Oelwein), Vic Collings (Oelwein), Tom Farmer (Cresco), Pat Schrage (Oelwein), Lyle Evans (Cresco), Dan Reeder (Cresco), Dennis Wubbena (West Union), Jean Kaufman (West Union), Jim Kaufman (Area One), Joy Schmidt (Area One), Howard Bernatz (Area One), and Darwin Schrage (Area One).

The following summary represents significant areas discussed during the meeting:

1. A great deal of interest was expressed regarding the joint effort agreements between Area One and participating high schools to offer various career education programs. Several high school instructors were concerned about possible unnecessary duplication of facilities if centers were established near existing high school programs, the possible competition these programs could create for available training stations, and whether local high school administrators were always fully aware of the implications of proposed joint-effort agreements.

2. It was recommended that Area One consider the following in the development of future joint-effort agreements:

   a. Available facilities housing existing high school programs should be utilized prior to establishment of a vocational center in the immediate vicinity.

   b. The effect of proposed new joint-effort offerings upon available training stations should be carefully studied before making an implementation decision.

   c. Area One should suggest that local administrators invite a vocational program representative from their local school to accompany them to future joint-effort planning meetings (to improve the communication flow).

   d. Mail information regarding progress of proposed joint-effort considerations to vocational education personnel at the local school.

3. It was recommended that Area One host the next Northeast Iowa Distributive Education Conference.

4. It was recommended that Area One sponsor and host a Career Day for high school D.E., O.E., etc. to better acquaint prospective students with Area One programs and facilities.

5. It was recommended that Area One's Retail Marketing Program permit students to achieve a degree of specialization for students entering with high school D.E. background.

It was indicated by Area One personnel that the previous recommendations and concerns would be considered and implemented where possible. In addition, the desire was expressed by Area One for a cooperative effort by secondary and post secondary instructors in the articulation of secondary and post secondary distributive education curricula.

The meeting concluded with an apparent concensus that further dialogue of this nature would be beneficial to all concerned.

TITLE: CHANGING TRENDS IN THE PLANS OF HIGH SCHOOL SENIORS. COMPARISONS OF THE EDUCATIONAL, EMPLOYMENT AND OCCUPATIONAL PLANS OF SENIORS IN INDIANA HIGH SCHOOL CLASSES OF 1966, 1969, 1972 AND 1975. FINAL REPORT.

PERSONAL AUTHOR: LISACK, J.P.

DESCRIPTOR: PROGRAM DESCRIPTIONS; *GRADE 12; *COMPARATIVE ANALYSIS; *CAREER CHOICE; *STATE SURVEYS; *CAREER PLANNING; EDUCATIONAL TRENDS; SECONDARY EDUCATION

IDENTIFIER: INDIANA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 11P.; RELATED DOCUMENT VT 103 309 IN THIS ISSUE.

ABSTRACT: THIS FINAL REPORT DESCRIBES A PROJECT TO IDENTIFY AND TRACE THE TRENDS OR CHANGES IN THE CHARACTERISTICS AND CAREER PLANS OF INDIANA HIGH SCHOOL SENIORS FOR THE CLASSES OF 1966, 1969, 1972, AND 1975. DATA GATHERED FROM APPROXIMATELY 186,000 SENIORS ARE PRESENTED IN TABULAR FORM WITH NARRATIVE HIGHLIGHTS OF THE FINDINGS IN A SUPPLEMENTARY PUBLICATION. DATA INCLUDE THE FOLLOWING AREAS: SEX, RACE, PROGRAM TYPE, HEAD OF HOUSEHOLD CHARACTERISTICS, EDUCATIONAL PLANS, FACTORS RELATED TO CAREER CHOICE, REASONS FOR DELAY OR DICONTINUANCE OF FURTHER EDUCATION, AND EDUCATIONAL PROGRAMS DESIRED BUT NOT AVAILABLE LOCALLY. SOME OF THE MORE SIGNIFICANT FINDINGS ARE PRESENTED IN THE REPORT. TRENDS WITHIN THE LAST TEN YEARS INCLUDE: A DECREASE IN COLLEGE PREPARATORY ENROLLMENT, GRADE INFLATION, A DECREASE IN THE PROPORTION OF HOUSEHOLDS WITH THE FATHER AS HEAD, AN INCREASE IN THE NUMBER OF SENIORS PLANNING IMMEDIATE EMPLOYMENT, AND AN INCREASED DELAY IN MAKING A CAREER CHOICE. TRENDS INVOLVING OCCUPATIONAL CHOICE INCLUDE THE GROWING POPULARITY OF OCCUPATIONS IN THE HEALTH AND MEDICAL-RELATED FIELDS, A DECLINE IN INTEREST IN ELEMENTARY EDUCATION, AND AN INCREASED INTEREST IN TECHNICAL JOBS. CHANGING TRENDS IN THE PLANS OF INDIANA'S HIGH SCHOOL SENIORS

I. STATEMENT OF OBJECTIVES OF THIS STUDY

A. Assist students in learning more about the various options open to them; provide data on occupations and careers, about post-secondary educational institutions and programs and related information; as well as enhance their ability to make reasoned choices and plans.

B. Provide comparative and trends data, in a readily comprehensive form, which will aid vocational/technical and career personnel (planners, administrators, counselors, teachers and others) to gain insights and knowledge about high school seniors. This in turn should help them to make better plans, programs and decisions. Data include the following areas:

1) Characteristics data of seniors; sex, type of high school program (e.g. Vocational Educ., Business Educ., College Prep., etc.), grade average, and size of community.

2) Characteristics of head of household; relationship, educational level and occupation.

3) Plans after graduation; chosen action, definitiveness, and employment.

4) Factors related to making career choice; when first "interest" was noted, and when "decision" was made of occupation chosen. Most important reason for choosing a certain occupation and the source or person most helpful in making career choice.

5) Seniors' main career choices; shown by occupational categories and also by individual occupations.

6) Reasons given by some seniors why they plan to delay further education or why some do not plan to further their education upon graduation from high school.

7) The plans of seniors who do plan to further their education: choice of institution, curricula/program choices; and planned method of financing education.

8) Education and training programs desired, but not available locally. (Important for planning possible vocational/technical programs.)

C. Record data and materials for future research and projects. Provide a series of historical base points which can be traced, extended linearly and developed further in the future.

II. PROBLEMS AND PROCEDURES

Policies, plans, and actions should be based on as much relevant and factual (preferably quantifiable) data that can be acquired, analyzed and reported. Past, present, and future time frames should be included. This is as true in the vocational/technical and career education fields as any other. The purpose of this project is to identify and trace the trends or changes in the characteristics and plans of high school seniors for the classes of '66, '69, '72 and '75.

It was first necessary to establish "base lines" for each class, from which changes could be recorded, compared and measured. Base data for four classes were obtained through previous research studies as indicated in Table 1.

TABLE 1
HIGH SCHOOL SENIORS SURVEYED

Class of	Total No. Seniors in Class	No. of Seniors Participating in Survey
1966 1/	70,000	38,000
1969 2/	75,315	47,540
1972 3/	81,500	51,600
1975 4/	82,650	49,663

With these data from each class, it was necessary to organize the tremendous amount of detail into a format that was easy to interpret, yet accurate. It was also considered important to provide the reader with information and leads which brought out the main points, trends, differences or similarities between classes. The form that was decided upon shows the data in tabular form on the right page and the related highlights and discussion on the left page (i.e. data and related highlights are on facing pages). Selected inter-relationships are also presented.

(For complete details, see supplemental report attached--SBVTE Project No. 45-75-C, *Changing Trends in the Plans of Indiana's High School Seniors.*)

1/ Accomplished by Booz, Allen, Hamilton, Inc., and reported in Research Report No. 1, 1967, *70,000 High School Seniors, Their Educational and Vocational Plans.* Research Department, Indiana Vocational Technical College.

2/ Data analysis and report accomplished by the Office of Manpower Studies of Purdue University as Manpower Report 70-1, 30 April '70, *75,000 High School Seniors, Their Educational and Vocational Plans, Results of a Survey of Indiana's High School Class of 1969.*

3/ SBVTE funded study: mail-out by IVTC, data analysis by Office of Manpower Studies of Purdue. Reported in IVTC Report No. 00-73-001-02, *82,000 High School Seniors, Their Educational and Vocational Plans, Results of a Survey of the Class of '72.* Jan. '73.

4/ SBVTE Project No. 2-75-C, *Educational and Employment Plans, and Occupational Choices of Indiana High School Seniors in the Class of '75.* 1 July, '75. (Also Manpower Report 75-1, Office of Manpower Studies, Purdue University.)

III. STRATEGIES

It was considered most opportune to involve all high school seniors possible in this project in order to acquire the necessary data--while at the same time helping them in making reasoned choices and developing their career plans.

Likewise, involving principals, teachers and counselors facilitated their coordinated participation and provided them with information and insights they would otherwise not have gained.

Further, these data are now recorded for current application--and they provide the base lines for continuing (linear) trend studies.

IV. ANALYSIS AND FINDINGS

Some of the highlights of the findings are reported below. The more extensive and detailed data are shown in tabular form in the atached SBVTE Project 45-75-C Report by percentage distribution to facilitate direct comparisons of items within each question asked. The total number (N) of seniors for each of the four high school classes are also reported. Further the numbers of responses for each item within each question are reported for the class of '75. Thusly, the reader can immediately see the relative size of response to each item expressed in numbers of seniors as well as by percentage distribution.

In order to clarify the meanings of the great amount of detail, the author has analyzed the tables and presented the findings (e.g. salient points, trends, similarities or differences) as Highlights. This is done by reporting the data on one page with the related highlights on the facing page. This format permits the reader to analyze the data separately from any other comments, and derive his own meanings as well.

V. UNIQUE ASPECTS AND OUTCOMES

Indiana high school seniors are changing. Their characteristics, vocational choices, and their employment and educational plans are moving perceptively in new directions. What are these changes? What are the developing trends? Answers to these questions are important to educational and vocational planners and administrators, as well as to counselors, teachers and others concerned with our youth. The attached SBVTE Project Report presents the detailed data and highlights concerning these and other questions.

This is the only report of its kind in Indiana. It is uniquely Hoosier in nature; nearly 186,000 Indiana high school seniors have been involved in the four classes.

For example, over the past ten years,--

1) More students are enrolling in Vocational Education type programs (~ 14%) largely at the expense of College Preparatory type programs (35.2%).

2) High school grade averages are steadily inflating: for example, the largest single group (43%) report their grade average to be "B". The largest single group reported "C" average in previous classes. (This grade inflation is true Nationally as well as in Indiana.)

3) The proportion of households where the father is head (84%) is slowly decreasing over the years--that is, more households are being headed by the mother or other than the father.

4) Both the educational and occupational levels of heads of household are progressively higher over the years.

5) A greater proportion of high school seniors are planning immediate employment after graduation (now at 33.4%) and a smaller proportion are planning to continue their education full time (30.7%).

6) A smaller proportion of seniors report their plans to be Definite (21.7%) but the largest group still reports their plans as Almost Definite (44.5%).

7) The proportion of seniors who want to be employed in their home city or county is slowly decreasing, and is now about 32%. The largest group (35.5%) have no preference and about 20% hope to be employed outside of Indiana.

8) First interest in chosen occupation was noted in elementary grades for about 10% of the seniors; about 15% noted an interest while in junior high school, but the largest group (26%) reported their first interest in their chosen occupation occurred when they were juniors in high school. There is a trend for interest in a given occupation to be delayed (e.g. noted later in school) by each subsequent class surveyed.

9) The decision in making a career choice is delayed to the senior year by about half of all seniors; about 25% report their career decision was made during their junior year, and 10% did so during their sophomore year. There may be a slight trend for career decisions to be made earlier in the class of '75.

10) The main reasons seniors gave for choosing a certain occupation include:

1st Activities on the job
2nd Money
3rd Kinds of people I'll work with
4th Serving society

An analysis of the data shows that the rank order changes from the 2nd most popular choice on for selected groups. Specifically, the above rank order applies to seniors who have selected Engineering or Technology, whereas seniors who selected Teaching or Health rate "Serving Society" and "Kinds of People I'll Work With" higher than "Money."

11) The source or person most helpful to the senior in making a career choice include:

		Class of '75
1st	Parents or relatives	32.8%
2nd	Friend	10.5%
3rd	Previous work experience	9.5%
4th	High school courses	9.4%
5th	High school teacher	8.3%

12) The trends that have developed over the past ten years, in seniors' choices of occupations within each cluster, include the following:

(a) There is a steady and growing popularity of occupations in the Health and Medical Career areas in each succeeding class (from 9.7%) of all seniors in 1966, to 14.5% in 1975).

(b) Although teaching is still a popular career area choice (about 8% of all seniors) there has been a decline in the proportion of high school seniors planning to become Elementary Teachers since the class of '66; popularity of becoming a Secondary Teacher peaking in 1972 and falling off in 1975.

(c) There is an increase of interest in becoming Technicians, both medical and technical types, as well as Police or Security Officers.

(d) A late reversal of the previous downward trend occurred as more seniors in the class of '75 chose Farmers, Engineers, Factory Assembly or Production Worker, and Author, Journalist or Reporter.

(e) There was a decline in the choice of Engineering careers from 1966 to 1972, with a notable recovery (4.3% of all seniors) in the class of '75.

(f) Interest in Computer related operations peaked in 1969 at 3.2%; subsequently the classes of '72 and '75 reported 2.7% of all seniors were interested in related occupations.

(g) There is an increased interest of seniors in becoming managers (from approximately 2% in 1966/1969 to 2.6% in 1972/1975).

(h) About 9% of the seniors chose an occupation in the Clerical area. There appears to be an increasing proportion of seniors interested in becoming Cashiers, including Retail Stores and Banks.

(i) There was an increase in the proportion of seniors who identified Housewife as their occupational choice (now over 2%).

(j) There was a drop of interest in becoming a Lawyer, Beautician, Beauty Operator, or Cosmetologist; Social Worker; or Airline Hostess (the latter still an unrealistic choice for more than 900 seniors).

(13) For those seniors who planned to continue their education, the most important reasons given for choosing a particular institution were:

		Percent
1st	Offers what I want to study	> 48%
2nd	Location near home	18%
3rd	Amount of tuition	< 8%
tied 3rd	Reputation or prestige of school	< 8%

(14) The most popular post-secondary programs--of two years' or less duration--were:

1st Nursing (Includes R.N. and L.P.N.)
2nd Secretarial
3rd Accounting
4th Medical/Health Support
5th Automotive and Diesel
6th Electronics
7th Business and Supervision

(15) Only 3.2% of the seniors identified a program of two years' or less duration that they would like to enroll in, but was not offered locally. Such programs were related to Health or Medical Support, Automotive or Diesel Technology, Nursing (all levels), Electrical/Electronics Technology, and Secretarial.

(16) The methods planned by seniors to finance their post-secondary education included:

		Percent
1st	Parents or family support	28%
2nd	Scholarship or grant*	17%
3rd	Personal savings	16%
4th	Part-time employment	14%

*Becoming more important for each subsequent class.

(17) The main reasons given by seniors who plan to delay continuing their education were:

1st Earn some money first
2nd Want more time to decide what to do
3rd Gain some work experience first

(18) The main reasons given by those seniors who do not plan to enroll in any post-secondary program include:

1st I plan to look for a job
2nd I already have a job arranged
3rd I am undecided what to do
4th I am not interested at this time
5th I plan to get married

(19) Among some of the interrelationships found were:

(a) Sex: Boys were slightly more likely than girls to seek employment upon graduation--but more likely than girls to enter military service. Girls were slightly more likely than boys to plan to continue their education full time. Proportionately more boys than girls planned to attend Vincennes University, Ivy Tech., and Purdue, as well as the composite of all private colleges and universities; on the other hand, more girls than boys planned to attend Ball State, Indiana State, and Indiana Universities.

(b) Grade Averages: A large majority of the "A" students and a lesser majority of the "B" students planned to continue their education in a post-secondary program; proportionately fewer of these students were planning immediate employment, military service, marriage or didn't know what they planned to do. A majority of both the "C" and "D" students were far more likely to seek employment after graduation from high school, join the military service, marry, or not to be sure of their plans.

More than 75% of the students planning to attend a public or private university had an "A" or "B" average with the exception of Vincennes which was 53.9%. The majority of students planning to attend Ivy Tech were "C" or "D" grade average students.

(c) Head of Household: When the head of household was the father, there was a higher probability for the senior to continue in post-secondary education and a lesser likelihood for the senior to seek employment, enter military service or get married immediately upon graduation.

Father heads of household generally had attained higher levels of education than had mothers. Seniors were far less likely to know what the highest level of education was if the head of their household was someone other than their father or mother. The most frequently occurring response was father as head of household and he was a high school graduate.

There was a direct relationship between the likelihood of seniors' plans to continue their education full time and the educational level of the head of household; i.e. the higher the educational level of the head, the more likely it was that the senior planned to continue studies. An inverse relationship existed as pertained to immediate employment and not know what their plans were (also true for military service and marriage).

(d) Major Field (Area) of Study: Most of the seniors (70%) who planned to enroll in a college or university were in a College Preparatory type program in high school...the strong exception being Ivy Tech: only about 5% of seniors planning to attend a university were enrolled in Vocational Education type programs. (Vincennes University was an exception to this situation wherein only about 44% were College Prep and 16% were in Vocational Education. Vincennes also had a higher proportion of seniors who were enrolled in Business Education, General Education, or Other types of programs.) As a rule, proportionately more College Prep type seniors planned to attend the main university campuses than the regional campuses.

The largest single group planning to attend Ivy Tech were Vocational Program type seniors (nearly 41%), and in comparison with the 70% composition of College Prep students in the public universities, less than 18% of Ivy Tech aspirants were in College Prep programs. Proportionately more students in Business Education, General Education, or Other type programs also planned to attend Ivy Tech.

(e) Population of Home Town: As a general rule, the smaller the senior's home town or city, the more likely it was that a father was the head of household; the larger the population of the home city, the higher proportion of seniors reported mother to be head of household. Seniors who reported "other" as head of household were less likely to know what the population of their home town was: where fathers were head of household seniors were more apt to know the population of their home town. The most frequently occurring response was father as head of household and population of senior's home town to be between 5,000 and 25,000.

(f) Seniors Not Planning to Continue Their Education: (This question was answered only by those seniors who did not plan to enroll in a formal educational or training program upon graduation from high school.) Seniors whose head of household was mother or other, were more prone to say they were not continuing their education than were seniors whose fathers were head. Seniors having other head of household were much more apt to say they were not continuing their education because they "planned to marry." Plans to look for a job after graduation were more readily reported by seniors whose head of household was father or mother rather than other. The most frequently occurring response for this group of seniors was father head of household and senior planning to look for a job.

VI. FINANCIAL STATEMENT

This statement will be provided within 60 (sixty) days, as the accounting and reporting procedures are still in process. It was considered to be advisable not to delay this report until the final financial details became available.

VII. SUPPLEMENTS

The data, their meanings, trends, comparisons, etc., are published in the attached report SBVTE Project No. 45-75-C, "Changing Trends in the Educational Plans of Seniors in Indiana High School Classes of 1966, 1969, 1972 and 1975," dated 1 March 1976. It is also planned to prepare summaries of these data to facilitate wider distribution.

NOTE: Due to numerous requests, additional computer runs are being made which will show the interrelationships and differences between seniors' plans and choices based on the type high school program (college prep., vocational, business education or other) as well as by race. These data will be published later in summary form reports as funds and time permit. The contribution of SBVTE in making these data available will be acknowledged.

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 17P.

ABSTRACT: THIS REPORT DESCRIBES THE DEVELOPMENT OF A JUNIOR HIGH SCHOOL LEVEL EXPLORATORY COURSE IN MARKETING AND DISTRIBUTION. OBJECTIVES WERE TO DETERMINE THE FEASIBILITY OF SUCH A PROGRAM, DEVELOP THE CURRICULUM, IDENTIFY MATERIALS NEEDED, DEVELOP CRITERIA FOR PERSONNEL SELECTION, AND WRITE THE PROPOSAL FOR AN EXEMPLARY PROGRAM. IN MEETING THESE OBJECTIVES, ON-SITE VISITS WERE MADE TO SCHOOLS IN THREE FLORIDA COUNTIES TO OBSERVE THE OPERATION OF AN EXISTING EXPLORATORY PROGRAM IN MARKETING AND DISTRIBUTION. THROUGH OBSERVATION, STUDY, AND EVALUATION OF THE FLORIDA PROGRAM, THE FEASIBILITY OF DEVELOPING A SIMILAR PROGRAM IN HOUSTON WAS AFFIRMED, AND IDEAS AND CURRICULUM PLANS WERE GATHERED FROM WHICH THE ONE QUARTER COURSE IN MARKETING EXPLORATION WAS DEVELOPED. THE REPORT BRIEFLY DESCRIBES THE RESULTS ACHIEVED AND THE METHODS FOR MEETING THE OBJECTIVES. AN APPENDIX CONTAINS THE TABLE OF CONTENTS FROM EACH OF FOUR MARKETING EXPLORATION CURRICULUMS DEVELOPED BY THE FLORIDA PROGRAM. (NJ)

ACKNOWLEDGEMENTS

The development of this exploratory program for grades eight or nine in the cluster of marketing and distribution by the Houston Independent School District was in cooperation with and funded through the Division of Occupational Research and Development, Department of Occupational Education and Technology, Texas Education Agency.

Mrs. Edith Patterson, Program Director, Distributive Education, Houston Independent School District, developed the proposal for this project under the direction of Mr. J. B. Whiteley, Deputy Superintendent, Occupational and Continuing Education, Houston Independent School District.

INTRODUCTION

The Houston Independent School District, in developing its career ladder of kindergarten through twelve, has successfully embarked on the career awareness program, kindergarten through sixth grade, and the career orientation course at the seventh and eighth grade level which is broad in scope and introduces the students to the fifteen occupational clusters.

To move from the orientation course to exploratory courses, we have exploratory programs in the areas of mechanics, construction, and manufacturing careers, but we did not have an exploratory program in the area of marketing and distribution.

We wanted to motivate students to acquire additional knowledge of the various careers in the world of marketing which would give them a better understanding of the world of work. We found that many students tended to drop out of school and get a job after leaving the junior high school instead of continuing with their education. Also, we wanted the students to be better prepared to determine whether or not they wished to go into the distributive education programs or into other cooperative programs at the high school level.

We felt the answer would be a course in marketing exploration at the junior high school level which would expose many students to various careers and give them some simulated job experiences. There are many interesting and exciting aspects to this program to interest students at this level and we found that some students were not being challenged enough nor were they interested enough to continue their education past the ninth grade. Therefore, our desire was to motivate students so that

they would continue their education and enroll in cooperative programs at the senior high level where they could work and continue their education.

Our research indicated that the State of Florida had introduced a program four years ago in exploration in the area of marketing and distribution and were having excellent results. Therefore in developing this project for Houston and Texas, we sent Houston Independent School District personnel to Florida for on-sight visitations to observe programs in operation in three county school districts. When this was completed we were to evaluate our findings and determine the feasibility of having a program here. If the decision was favorable, we were to develop curriculum, identify materials needed, decide on qualifications for choosing personnel, and write a proposal for setting up an exemplary program in the District for the ensuing school year, 1975-76.

OBJECTIVES

The original proposal stated the following objectives;

1. Assist students in making a meaningful decision in the area of Distributive Education.
2. Help students to develop an understanding of the opportunities existing in the area of marketing.
3. Reduce haphazard enrollment of students in Distributive Education, thereby improving the product of our Distributive Education programs.

In examining the above objectives it was quickly realized that what we were attempting to do was identify objectives which could only be accomplished by the actual implementation of the marketing exploration program. Therefore, what we were really doing at this time was studying

Florida's program through on-sight visitations by observing the programs in operation in three county school districts in order to determine the feasibility of implementing just such a program in Houston. If, by observation and study, we determined its feasibility, then we would as part of this project develop the curriculum; identify the materials needed; develop the criteria for choosing personnel; and write a proposal for setting up an exemplary program in the District during the 1975-76 school year. These actually were our objectives and each one was accomplished during the period of this project which ended June 30, 1975. The Florida program was excellent and successful and we wished to duplicate its success here in Houston.

METHODS USED TO ACHIEVE OBJECTIVES

An itinerary for on-sight visits to schools in three county school districts was arranged by the Assistant Program Administrator, Distributive Education, for the State of Florida. Approximately twelve schools which had the marketing exploration program were visited. The three week schedule, which began Wednesday, February 26, 1975, and ended on Friday, March 14, 1975, included visits in Tallahassee with the Director and the Assistant Program Administrator for Distributive Education in the Office of the Department of Education for the State of Florida. Work sessions were spent with the Curriculum Consultant who was the chief writer for all of the curriculum used in the Marketing Exploration Program in Florida. Visits were made to Duval County (Jacksonville), Orange County (Orlando), and Pinellas County (St. Petersburg). In these counties,

various administrators who were involved with career education and the marketing exploration programs were visited and the various programs were studied and discussed at length with emphasis on the marketing exploration program. Days were spent in the classroom with the teachers and the students in the program at the various schools. Inner city schools, integrated schools, and affluent area schools were visited.

For any program to be a success, one could see that much depended on the initiative and innovation of the teacher. There were obviously some programs which were better than others for just the above mentioned reason. And there were some very exciting programs and classroom management techniques that would justify the program and make it very desireable to have at every junior high school. Where good teaching was going on, every student was excited and participating. The program lends itself to competitive activities which junior high students enjoy so much, to an excellent system of classroom management techniques, and to a wealth of information of available careers in marketing and distribution.

It was through these visits that not only did the observation, study, and evaluation justify having the program, but the practical ideas and workable curriculum which were gathered in Florida in volumes could be made available for use in any new marketing exploration program to be started in another school.

SPECIFIC RESULTS ACHIEVED

Curriculum

Through research and application, refinement and rewriting, Florida has developed three distinct and independent courses in exploration for

the eighth and ninth grade levels. The three courses are "Exploration of Retailing Careers," "Exploration of Marketing Services Careers," and "Exploration of Wholesaling Careers." Each one is complete and can be used as a semester or quarter course. They also have curriculum for an introductory course called "Orientation to Marketing Careers" which is offered at the sixth and seventh grade levels. This orientation course is generally a six weeks or nine weeks course offered in conjunction with other introductory courses in the career areas at this lower grade level. Each one of these courses has curriculum materials in loose leaf form which contains a forward, acknowledgements, table of contents, introduction, teacher's guide section and student materials section. It provides suggested performance objectives, learning activities, and evaluation instruments. We have included in the appendix a copy of the table of contents of each one of these curriculums. These materials are available from the Florida State Department of Education on a cost recovery basis.

For Houston, we decided to offer an elective one quarter course (80 minute periods) called Marketing Exploration. We would use the curriculums developed in Florida, which were excellent, by pulling from each of the three courses that they offered and integrating them into one course offering here. We did this so that we could reach more students with a one quarter elective and expose them to the many careers in the field of marketing and distribution. We would add our additional activities and projects and make whatever curriculum changes as the local situation would warrant as we moved through the various areas within the curriculum.

Materials and Equipment

There is a special section in these curriculum offerings from Florida

called "Special Resources" which identified for us the many and varied materials that are available. Also, the State Department of Education of Florida funded a project with Florida Atlantic University to make a competency based study of equipment and materials to be used in specialized laboratories in pre-vocational Distributive Education programs. This study of equipment and materials for pre-vocational Distributive Education was completed on August 31, 1974 and was developed to assist Distributive Education teacher-coordinators, teacher educators, supervisors and administrators at the school, county, and state levels in the selection of equipment and materials which they considered would provide the necessary tools for developing competencies contained in the instructional program at the junior high school level.

The process of developing these lists was the result of interviews and surveys of county Distributive Education supervisors, middle school Distributive Education coordinators, and businessmen in their respective areas of marketing. A representative sample was taken from each of the five geographic areas in the State of Florida.

In much the same way that the pre-vocational industrial arts student is better able to make industrial career choices because of the opportunity to use various kinds of equipment found in those careers, so must the student in the marketing and distribution exploration course have the same opportunity to use equipment found in his career areas.

Personnel

In developing criteria for choosing the personnel for teaching this course in the junior high schools, we sought the advise and experience of the personnel in Florida and examined the results of their program.

It was recommended that the teachers for the marketing exploration course have some of the same requirements as a distributive education teacher and we definitely wanted them to have some courses from the career areas. Also, we wanted our teachers to have work experience that was recent and relevant to the field of marketing and distribution. There is quite a difference between the curriculum offered in distributive education programs at the senior high level and those offered at the junior high school level. At the senior high level the students are employed and require job coordination, have DECA club activities, and competitive events. This is not true of the junior high students where the exploratory courses are taught and we did not want to impose the senior high curriculum on the junior high students. Therefore, it was decided that it would be better to have a teacher teach the junior high school level courses who had not taught distributive education before, that met the job experience criteria, and that had some of the required course offerings for distributive education and career education as required by the State.

Proposal

The last part of this project which we had undertaken was to develop a proposal for an exemplary program in marketing exploration in vocational education. Our first proposal contained a request for implementing the program in twelve schools and the amended version called for six schools. Our school district is divided into six areas with six area superintendents. Therefore we wanted to have the program in a junior high school in each area for evaluation purposes. We would also choose these six schools to be not only representative of all areas but of economic, ethnic, and geographic areas. Much time was spent conferring with local school officials

on choice of schools, integrating a new course into the curriculum, and the correct procedures to follow. We conferred at length with the local director of career education. In this proposal we followed the State guidelines carefully and provided for the curriculum, the materials, the equipment, the training of the teachers, and the resources necessary to make the program a success and one that could be evaluated for implementation for the State of Texas.

CONCLUSIONS AND IMPLEMENTATIONS OF THE PROJECT

We have successfully completed all aspects of this project. The on-sight visitations to Florida to see first hand the program in its implementation verified what we had heard - that it was a successful program fulfilling a real need among the junior high school students in the career area of marketing and distribution. Since Florida had developed curriculum which was excellent, it could be transported to Houston to meet our needs in implementing the marketing exploration program in our schools. The identification of materials, equipment, and teaching methods were acquired while visiting Florida. A proposal was drafted requesting the personnel, materials, equipment, and supplies, and sent to the Texas Education Agency for action. This final step completed our project.

TITLE: POSTSECONDARY OCCUPATIONAL EDUCATION. INSTRUCTIONAL PLANNING NEEDS IN TEXAS.

PERSONAL AUTHOR: RORIE, CHARLES D.

DESCRIPTOR: *INFORMATION SYSTEMS; *INDIVIDUALIZED PROGRAMS; *VOCATIONAL EDUCATION; *COMMUNITY COLLEGES; *CURRICULUM PLANNING; PROGRAM DESCRIPTIONS; POST SECONDARY EDUCATION; STATEWIDE PLANNING

IDENTIFIER: TEXAS

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 60P.

ABSTRACT: THIS REPORT CONTAINS THE ORIGINAL PROPOSAL, REPORTED FINDINGS, AND REVISED PROPOSAL AND RECOMMENDATIONS OF A PROJECT TO COMPILE AND ANNOTATE INDIVIDUALIZED INSTRUCTION PROGRAMS IN VOCATIONAL-TECHNICAL EDUCATION IN TEXAS COMMUNITY AND JUNIOR COLLEGES. DUE TO A LACK OF DOCUMENTATION REGARDING THE INDIVIDUALIZED INSTRUCTION PROGRAMS THE INITIAL PROJECT OBJECTIVES WERE NOT MET. HOWEVER, THE ORIGINAL METHODOLOGY, EXPECTED RESULTS, PROPOSED BUDGET, AND PERSONNEL PLAN ARE INCLUDED. AS A RESULT OF THE FINDINGS, A REVISED PLAN WAS PROPOSED AND IS ALSO INCLUDED IN THE REPORT. THE OBJECTIVES OF THIS RECOMMENDED PROJECT ARE: (1) TO CONSTRUCT AND PUBLISH A CORE CURRICULUM FOR 10 POSTSECONDARY VOCATIONAL PROGRAMS, (2) TO SELECT, WRITE, AND PUBLISH A SET OF PROGRAM OBJECTIVES, AND (3) TO DESIGN AND CONSTRUCT A TEXAS OCCUPATIONAL PROGRAM CURRICULUM AND OBJECTIVE BANK, PLACING THE CORE CURRICULUM AND OBJECTIVES IN AN INDEXED REFERENCE SYSTEM. THE PROPOSED METHODOLOGY, EXPECTED RESULTS, AND RECOMMENDED USE OF THE FINDINGS ARE OUTLINED, AND PROJECT-RELATED CORRESPONDENCE AND SURVEY FORMS ARE APPENDED. (NJ)

1. INTRODUCTION

The Project for the Compilation and Annotation of Information about Current Individualized Instruction in Vocational-Technical Education in Texas Community/Junior Colleges and Development of Missing Components (hereafter referred to as the "TEA Summer Project") was conceived as an ingathering of existing instructional material for state-wide replication usage. It was hypothesized that many well-designed individualized courses, across Texas, would provide materials for broader use in a number of programs spread throughout numerous community colleges.

As this project report will show, this original hypothesis proved to be untentable. However, a variety of useful benefits to state directed improvement of postsecondary occupational programs did evolve.

To future researchers and instructional development officers, the criteria for individualized instructional materials may be most useful.

Criteria for Individualized Instructional Materials

An adaptation of the following criteria might be used to evaluate existing materials and plan for creation of new

individualized instructional materials. These criteria were developed and are currently in use at Austin Community College.

Instructional materials which have at least one of the following components will be considered individualized.

(1) What a student must learn in order to achieve a passing grade is made known to the student in terms he/she can understand (behavioral objectives).

(2) A number of options are available to the student for achieving the objectives of the course, as opposed to only one method of instruction (alternate learning modes).

(3) Students are able to move through the course at a rate most comfortable for them (self-pacing).

(4) A student has as many opportunities for demonstrating that he/she has achieved the course objectives, without penalty (re-test capability).

(5) Students are not required to repeat instruction for objectives they have already mastered (pre-testing).

(6) All aspects of the instructional program are continuously subjected to scrutiny and revised in response to information collected by the instructor (revision component).

The value of a state-wide agreement on the definition of individualized instruction is obvious. Perhaps these Austin Community College criteria may serve this need.

2. ORIGINAL PROPOSAL

Abstract

TITLE OF PROPOSED PROJECT: Compilation and Annotation of Information About Current Individualized Instruction in Vocational-Technical Education in Texas Community/Junior Colleges and Development of Missing Components

APPLICANT ORGANIZATION: Austin Community College

Problem

Although vocational-technical educators in Texas have made considerable progress during recent years in individualizing program materials, important next steps are needed to fill gaps in development and to compile and annotate descriptions of available, useful programs for wider dissemination.

Specific identified needs missing from previous development and research are: (1) a comprehensive and annotated listing, by program area, of materials already developed; (2) assessment of usefulness of available materials; (3) identification of areas for which adequate materials do not exist; and (4) a dissemination system for providing information to

vocational-technical program directors.

This project is proposed to fill these gaps.

Objectives

Objectives of the proposed project are:

- To develop a comprehensive listing of individualized instructional materials available to instructors of vocational courses in community colleges.
- To establish criteria for usefulness of materials and determine usefulness by applying pre-determined criteria.
- To identify vocational-technical areas for which adequate materials do not now exist.
- To recommend a dissemination system for providing information about materials and their effectiveness to program directors of vocational-technical courses.

Procedures

Procedures to be utilized in this project include a survey, college-by-college, of vocational-technical programs considered individualized, collection of materials of these programs, assessment of the usefulness of the materials by

applying pre-determined criteria, identification of gaps in individualized programs in areas taught by at least five community/junior colleges in the state, development of materials to fill some of the gaps, and development for dissemination of a catalog of available programs which will include annotated program descriptions.

Activities will include:

- Convening of 15 vocational-technical faculty members from colleges throughout the state to establish criteria for evaluating instructional materials.
- Convening of a smaller group to compile and annotate a comprehensive list of available materials.
- Convening of the larger group to identify vocational-technical areas which need individualized materials development and to begin such development.

Results to be Produced and Proposed Utilization of Findings

Results will be comprehensive, annotated list of available individualized instructional materials for community college instructors in vocational-technical areas; additional individualized instructional materials for areas presently without such materials; and criteria for assessing the usefulness of individualized instructional materials in vocational areas.

Statement of the Problem

The Texas Education Agency has funded a number of workshops and training sessions in recent years to encourage vocational-technical educators to create individualized instructional materials. These workshops trained persons in vocational areas to revise their courses of study into a variety of presentation modes, and, thus, resulted in providing students with alternative ways to learn vocational-technical skills. Individualization also provides the mechanism for students who already have some of the skills to move on to more difficult material without waiting for beginners to master the earlier skills.

Leadership and encouragement from the Texas Education Agency, through these workshops and related special projects, have increased the status and effectiveness of vocational-technical education in Texas community and junior colleges. During the past year, vocational enrollment state-wide has increased nearly 13 percent.

Increases in enrollment have brought more variety of students into the vocational-technical programs. Mature students, changing careers, bring self-motivation and abilities to learn on their own with guidance from the instructor if

they have a variety of teaching aids. The more varied the student makeup, the more necessary is individualization of instruction.

The TEA-funded workshops and training sessions have been useful in encouraging vocational-technical instructors to think individualization, and good programs have been developed. However, at present there is no available information about individualized programs available, how to secure them, and evaluation of their effectiveness with students over time.

A search through Educational Research Information Centers (ERIC) for individualized program descriptions of vocational-technical programs for community colleges, uncovered descriptions of 33 programs (Print 13/5/1-33, File 9, AIM/ARM, pp. 4193 - 4217).

These 33 programs included one in "differentiated staffing," two in remedial reading and mathematics, one each in secretarial, carpentry, automotive mechanics, and meat cutting. The 26 remaining programs found in the search all related to distributive education (retailing) and would be equally as useful for high school students as for college students.

While many more individualized programs surely exist, they are not readily available to those who wish to replicate them.

Important next steps are indicated.

Identified as missing from previous development and research are: (1) a comprehensive and annotated listing, by program area, of materials already developed; (2) assessment of usefulness of available materials; (3) identification of areas for which adequate materials do not exist; and (4) a dissemination system for providing information to vocational-technical program directors.

At present no empirical data have been gathered to identify accurately, by program area, those materials that have proved most useful. Also, no systematic dissemination has been implemented to make such materials known and available to faculty throughout the state.

Austin Community College proposes to organize a summer program to address these next steps in the collecting and disseminating of information on individualized instruction in vocational education.

Objectives

Objectives of the proposed project are:

- To develop a comprehensive listing of individualized instructional materials available to

instructors of vocational courses in community and junior colleges.

- To establish criteria for usefulness of materials and determine usefulness by applying criteria.
- To identify vocational-technical areas for which adequate materials do not now exist.
- To recommend a dissemination system for providing information about materials and their effectiveness to program directors of vocational-technical courses.

Methodology Originally Planned

Project will begin May 1, 1975, with completion scheduled four months later. Timetable and activities proposed to meet above-stated objectives include:

May, 1975--Appointment of Project Director. Gathering of copies of available instructional materials. Vocational-technical faculty members from throughout the state will be identified and invited to participate in the assessment phase of the project.

June, 1975--Five vocational-technical staff members from Austin Community College and the Project Director

will compile and annotate a comprehensive list of avs'lable materials. The group will travel to program sites throughout the state to see how individualized programs are implemented. The annotations will be descriptions of the materials and the ways they are used.

July, 1975--Ten vocational-technical faculty members from other colleges and the five from Austin Community College will convene to establish criteria for evaluating instructional materials and applying the criteria. (See Appendix for example of possible criteria.) The team of 15 will apply the agreed-upon criteria to the programs identified and annotated. They will also identify vocational-technical areas which need individualized materials development. Priorities for development will be programs offered in at least five community colleges in the state.

August, 1975--Assignments for development of new materials will be made to members of team of 15. Actual materials development will be preceded by a one-week training session in the development of individualized instructional materials. A second week will be spent

in development of rough versions of such materials. The last two weeks of the month will be devoted to revision and to devising a dissemination plan so the results of the summer work will be available to other vocational-technical instructors and program leaders.

Expected Results Originally Planned

The ultimate result of this project will be the greater dissemination of information throughout the state, a reduction in duplication of instructional development efforts, and an increase in the use of individualized instructional methods.

Deliverables to the Texas Education Agency at the end of the proposed four-month project are:

- One hundred copies of a final report, including an annotated catalog of individualized vocational-technical programs now in use in Texas community/junior colleges. The descriptions will include evaluations of their usefulness, their strengths and weaknesses.
- Recommendations of ways to disseminate the annotated catalog to vocational-technical program leaders in community/junior colleges throughout the state.

- A list of vocational-technical areas for which individualized instructional materials are still not available.
- Drafts of the individualized packages developed during the developmental period of the four-month project.

Personnel

Original Project Director--William Horace Scott, Associate Professor and Chairman, Division of Engineering Technology, Annandale Campus, Northern Virginia Community College

Mr. Scott, since 1967, has worked with seven community colleges--in addition to Northern Virginia--in assisting faculty to implement individualized instruction in engineering, technical, and other vocational courses. He is knowledgeable through both formal training and personal experience in the theory and techniques of the so-called systems approach to instruction and is aware of its potential and its limitations.

He attended Duke University, earning a Bachelor's Degree in Science Education in 1964, and in 1971 a Master of Science Degree at Clarkson College of Technology. He has

completed all course work in a doctoral program in community college administration at The University of Texas at Austin. His dissertation is in progress. He also is a graduate of the National School of Heavy Equipment Operation (Motor Grader Operator's Course).

Before joining Northern Virginia Community Colelge, Mr. Scott was instructor of electronics at John Tyler Community College, Chester, Virginia.

In addition to his experience in education, Mr. Scott has worked (from 1960 to 1964) as a transmitter engineer, Radio Station WDNC, Durham, North Carolina. He operated, maintained, and repaired five-KW AM and ten-KW FM transmitters and a wide range of associated equipment, including phasing gear for a three-tower directional array. He participated in the acquisition and installation of new AM and FM transmitters.

Organinally Planned Austin Community College Participants--
Edward L. Stewart, Jimmy Moore, Ross Welch, Weldon Hickey, and Vincent Foster

The five are all instructional leaders in technical-vocational programs at Austin Community College, and all have made considerable progress in individualizing the instruction

in the areas in which they work.

Mr. Stewart is Program Leader in Printing; Mr. Moore, in Building Trades; Mr. Welch is administrator of the Downtown Skills Center (which includes five different vocational education programs); Weldon Hickey is Program Leader in Office Occupations; and Mr. Foster, in Air Conditioning and Refrigeration.

Originally Planned Other Ten Participants--To be selected during the first month of the project. Their names will be presented to the Texas Education Agency by May 31. These participants will be instructional leaders in a diverse group of vocational-technical programs who have capability of developing individualized materials and who will complement the strengths of the five participants listed above.

Facilities, Equipment, Materials, and Supplies

Austin Community College facilities will be used for this project. Materials and supplies will cost more than supplies usually do for a four-month project because they will include multi-media materials and supplies as the team will be developing some videotapes and audiotapes.

Final Project Director--Dr. Charles D. Rorie

Dr. Rorie holds the Associate in Arts degree from Tyler Junior College, the Bachelor of Arts degree in English and History from Sam Houston State University, the Master of Science degree in Guidance and Counseling from East Texas State University, and the Doctor of Philosophy degree in Community College Administration from the University of Texas at Austin. He has done additional advanced study at Louisiana State University, Dalhousie University (Canada), North Texas State University, and Southwest Texas State University, as well as the Institute for Academic Deans of the American Council on Education.

Dr. Rorie's experience includes public school teaching in Texas and Canada, three years as an Education Officer in the Royal Canadian Navy (Supervisor of Instruction for Electrical Division of Fleet School), three years as Counselor and Director of Special Admissions at Southwest Texas Junior College, two years as Administrative Intern with the Post-secondary Division of the Department of Occupational Education and Technology at the Texas Education Agency, and two years as Dean of Instruction of West Virginia Northern Community College.

Dr. Rorie is a member of the American Vocational Association, the American Association for Higher Education, the American Association of Community and Junior Colleges (Individual Associate), Phi Delta Kappa (Occupational Research Literature Committee), and the West Virginia Association of Academic Deans.

Previous funded research projects include the "Eagle Pass Higher Education Facilities Comprehensive Planning Study," done for the Coordinating Board of the Texas College and University System, and The Comparative Rating Scale Model: Occupational Program Evaluation in Higher Education, done for the Texas Education Agency.

Originally Proposed Budget

Title of Proposed Project: Compilation and Annotation of Information About Current Individualized Instruction in Vocational-Technical Education in Texas Community/Junior Colleges and Development of Missing Components

Applicant Organization: Austin Community College

Beginning and Ending Dates of Project: May 1, 1975 to August 31, 1975

Period Covered by This Budget: May 1, 1975 to June 30, 1975

Purpose of Proposed Expenditures

	Applicant's Budget Account No.	Expenditures
1. Salaries and Wages (see Personnel Plan)		$ 8,200
2. Social Security; Federal Unemployment Tax (if paid)		
3. Travel Expenses (see Personnel Plan		$ 2,500

	Applicant's Budget Account No.	Expenditures
4. Supplies and Materials (expendables)--includes supplies for making multi-media materials		$ 250
5. Communications (telephone, postage, etc.)		$ 100
6. Miscellaneous Services (printing, duplicating, data processing, etc.)		
7. Contractual Services (consultants' fees, consultants' travel expenses, other contractual services)		
8. Leasing or Renting Expenses (facilities, equipment, etc.)		
9. Indirect Costs		
25 percent of personnel costs		$ 2,050
8 percent of other direct costs		$ 228
10. Other Costs (identify)		
Total expenditures during period covered by budget		$13,328

Original Proposed Personnel Plan

3. FINDINGS

The team of researchers was most astonished at lack of clear understanding concerning "What is Individualized Instruction" by our definition.

In almost every college visited, most of the components outlined in the beginning of project, were in use to some extent. The least available were written objectives. The participants generally agreed that students were informed at the beginning of the semester of the requirements necessary to successfully complete a course. However very few sophisticated statements of objectives were found.

Self pacing was evident in most all programs as was retesting without penalty. Alternate modes of instruction were used at some institutions. (One school was teaching a course with "team teaching": i.e., two instructors lecturing.) Only one school was hostile toward "Individualized Instruction." Others seemed uninterested "by name," but were using one or more of the project defined components. The general feeling was that "I.I." had been somewhat over sold, some times forced, with

negative results. Though several institutions were verbally committed to "I.I.," most instructors were hard pressed for a realistic definition.

In the best programs it seems that there was an unusually interested instructor who had taken it upon himself to "Find a More Effective Way" and the result was a better program, leading to the subjective conclusion that "I.I." can be successfully developed if the instructor is really sold on the idea and used his own initiative to bring a better method to the student.

One institution had designated four program areas where developmental work was to be done on every course level in those programs. That institution had promised full support to the four program areas.

One instructor had done considerable writing of what appeared to be good usable materials but he said that this was " . . . just for the files; I really didn't use that material."

Various sets of commercial materials with work books stating objective reference materials and instructions to be used along with slide-film packages which also made use of "Hands on" problem solving were observed in use. These also contained pre- and post- tests and employed the recycle method--a flow chart and student record-keeping that seemed impressive.

Available for what I considered a fair price. Some institutions were considering buying these entire packages, and instructors seemed to react favorably to such aids.

The misunderstanding that "I.I." is a "package deal" in that it consists of a 1-to-1 student/teacher situation could be found most everywhere.

Bi-lingual instruction required on some south Texas schools presented a challenge that was being met thru some aspects of "I.I." One research team member recommended:

1. A Standard Definition of Terminology.
2. Get off the hard sell I.I. and "let it happen" through showing instructors how it will work.
3. Create an objective file on state level for programs where available.
4. Good I.I. is not developed quickly, release from regular duties might be made available for development.
5. Since most Voc/Tech Instructors were hired as teachers because of work experience rather than formal training, not many writers exist among them. In order to provide both skill expertise and writing ability, assign a writer to a group of classes to attend during class session, translating visual teaching methods into written objectives.

6. It seems the general thought that I.I. is not the answer to all ailments, but usually serves a useful purpose.
7. Individualized instruction has been oversold in some institutions, resulting in a negative attitude towards it. Usually the advantages seem to be for the very fast student who would probably be successful regardless of method of instruction, according to some dissenters.
8. Individualized instruction has much merit, but it is not a cure-all.
9. I recommend further study of the I.I. methods of teaching, and refinement in the way it is administered and sold to faculty.

In the report of another project staff member, most of the programs could meet more than 50% of the criteria established in the proposal. The researcher made the following observations:

1. Practically all programs provided their students with the course objectives at the beginning of the course. Many programs included with this information, such things as, grade computation, attendance requirments, available resource material for the course. Progress Charts with the course objectives are used extensively.

2. TEA requires that all voc-tech programs have an advisory committee to assist in the formulation of the program, prior to application to the agency for program approval and subsequently, to help in the evaluation and revision of the program.

3. Multiple methods of instruction are generally available to students in the cognitive areas; however, in the psychomotor areas, patterning is the only real method of development. One does not learn to walk by reading a book, or seeing a movie, but by practice. First crawling, then standing, then walking but not with expertise until many lumps have been gathered by the student. There are some educators today, who would have you believe that an arc-welding student could learn to make certificable welds without ever burning any welding rod.

4. No programs were observed that restricted skill development as long as progress was being demonstrated. A student's ability to move at his own pace in the cognitive areas proved to be much more traditional in many institutions and programs. The class room portion of programs tended to be handled in large groups mostly in each step. (There were several notable exceptions to this; not all programs fit in this situation.)

5. Retesting without penalty in the cognitive areas does not occur in many of the programs or institutions. Retesting in skill development was restricted primarily by limitations in lab space, time and equipment. Instructors voiced the right of their students to practice a skill until they got it right.

Program areas across the state are diverse to the extreme. For example, we found some programs being run as live shops, where students utilized time clocks, were assigned to live jobs, were expected to perform each job within a specific time frame, were even exposed to customer pressure and customer relations. On the other hand, there were programs in the same area where a live problem was not allowed in the lab. The students worked with specially developed lab components.

Equipment and facilities are equally diverse. There was very little consistency of these items in a given program area.

Because instructors have developed learning materials around the equipment and components that they have had available and in compliance with the philosophy of their learning environment, very few of these materials are easily transferred from one institution to another.

The third research field-team member suggested that:

1. Of the 11 schools visited by this project researcher, most said that they did use stated objectives. Some had them written and some stated them to the students at the beginning of the course. Some of the objectives were of good quality and some appeared to be designed solely to meet the administrations' rules. (Example: "The objective of this course is the student will make a passing grade.")
2. Most all of the vocational technical programs are using self-pacing in the lab portion. Some do so only to the extent that they have to, and some said they did not use it at all. Very few said they used self-pacing in the cognitive area.
3. All programs in all schools said they have more than one method of instruction. Mostly it consisted of video tapes, etc.
4. Re-testing without penalty was an area that rarely provided clear cut answers on in most places. Some could retest in the lab work but could not in the theory portion of the course. Many stated that students could not retest at all without penalty and gave reasons for this. (Example:

"Students will not study before taking test first time. They will come in and flunk the test just so they know what to study.")

5. Evaluation and revision was something that everyone stated they did, but very little concrete evidence of this being done was seen.
6. T.E.A. states that all Voc/Tech programs will have an advisory board and we found this to be true in all cases. Some said they used the committee to the fullest extent and some said they were not using them at all.

This project has not succeeded in doing what it first set out to. However, it is proven that the original proposal could not be done because the material is not available to compile. What material that was found is mostly written to cover some existing piece of equipment and could not be used any place else that did not have that exact piece of equipment.

According to the projects' interpretation of individualized instruction it was found that many people who thought they were not individualized at all were using most all areas that we had identified to some extent.

In summary, there was general consensus that the original plan to compile a set of replicatable materials, to

be supplemented by some construction of new materials, was not a realistic task, for the reasons enumerated by the team members. As an alternative, workable, plan, the recommended project suggested in the following chapters was designed.

RECOMMEDNATIONS DERIVED FROM ACHIEVED RESULTS AND CONCLUSIONS

The original objectives of the initial planning of this project came to be somewhat altered during the course of the study, as explained in the previous sections of this report.

As a result of the research findings, already described, the director and professional staff of the project devised the following recommended plan as a suggested suitable means of accomplishing, in a larger format, the real goals of the study.

The following proposal is the recommendation of the study then:

Statement of the Problem

Vocational and technical education programs at the postsecondary level in Texas, comprise an extremely diverse set of offerings. This variety is an advantage to Texas students, allowing them to choose from many career options. However, there is a somewhat hidden diversity, among occupational programs in Texas, which may have less desirable

characteristics. This varience concerns program curriculums and objectives. A dozen Texas community colleges may offer a technical program with a single title, yet each college may teach toward entirely different outcomes.

Varying outcomes based upon local advisory committee recommendations concerning specific local needs, may sometimes be sound planning. However, programs of identical title and similar purpose, funded at the same rate and through the same source, and operating at the same educational level, should certainly be based on some common curriculum planning.

Core-curriculum coordination in Texas postsecondary institutions is currently a subjective process based on individual consideration of each program proposed by each institution. Though the U.S. Office of Education, and some regional consortiums of states, have published program guides, the actual use of such materials in Texas has been informal and inconsistent, as can be seen by even a cursory inspection of catalogue curriculums in similar programs across the state. State-wide objectives do not exist in specific written form for multiple-offering programs in postsecondary vocational and technical education.

Texas needs to establish formally approved statewide core-curriculums for multiple-offering programs in postsecondary

education. In some cases, existing published guides may be appropriate; in other cases, state governing boards' materials are suitable; etc. But, in many fields, little usable core-curriculum materials exist.

Even where a core-curriculum is semi-established, limited agreement exists concerning objectives, and such objectives as do exist are rarely stated in behavioral terms. State standards concerning hours of instruction required for a given field do not delineate program objectives. The existence and availability of a variety of curriculum reference materials does not mandate their use.

This proposed project is designed to improve curriculum planning and coordination through production of core-curriculums and objectives for the ten most common multiple-offering postsecondary occupational programs presently operating in Texas. In the process, a standardized curriculum/objectives format will be developed suitable for replication for all major program areas in Texas postsecondary vocational and technical education.

Objectives

The objectives of the proposed project are:

To construct and publish a core-curriculum for each of the ten vocational and technical post-secondary educational programs having the largest number of multiple-offerings in Texas public institutions, i.e.,

1. Mid-management
2. Vocational nursing
3. Auto mechanics
4. Air conditioning and refrigeration
5. Welding
6. Data processing programmer
7. Stenographic and general secretarial
8. Law enforcement
9. Drafting and design technology
10. Electronics technology.

To select, write, and publish a set of program objectives for each of the ten programs designated.

To design and construct a Texas Occupational Program Curriculum and Objective Bank (TOPCOB), placing the core-curriculums and objectives prepared by the project in an indexed reference system suitable for use by state and local administrators.

To prepare recommendations for gradual expansion of the TOPCOB system including all multiple-offering postsecondary programs in vocational and technical education in Texas.

Methodology

The project should require approximately one year for completion. Initially, the activities of the Project Director will center on identification of all TEA Postsecondary curriculum sources for the ten programs selected. Other state-level sources will be identified and materials collected, including those from governing boards, advisory committees, and industrial sources, etc.

Federal and private sources, as well as regional consortium efforts, will also be included in the study. The

initial intensive research phase will thus systematically collect and organize all relevant curriculum development sources for the ten programs selected.

Then, working with TEA consultants and administrators, the Project Director will produce a composite core-curriculum and set of objectives for each chosen program area.

These core-curriculums and objectives will then be reviewed by specially selected state program advisory committees, and other appropriate groups, for validation.

Finally, the completed ten sets of core-curriculums and objectives will be published in index form, for reference use by TEA consultants and administrators, and by local administrators as the Texas Occupational Program Curriculum and Objective Bank. The format used will provide for regular revision and update, as well as expansion to eventually include all multiple-offering programs.

Specific Results to Be Produced and Use To Be Made of Findings

This project will have an immediate effect on the development of new postsecondary occupational education programs of the types selected. Local administrators will be able to begin their program development in these areas with a

state core-curriculum and an indexed bank of objectives as base planning to combine with local advisory committee input. This should encourage better state-wide coordination in these areas, reducing unnecessary duplication of effort and resource expenditure. State level evaluation at both development and review states will also be aided by existence of these materials.

Additionally, the format, plan, and procedures developed by this project, for the design and production of state-level core-curriculums and program objective banks, will encourage increased coordination of efforts in this state-level planning function, with resulting greater efficiency in research and development efforts for postsecondary occupational curriculums and objectives.

Deliverable to the Texas Education Agency at the end of the proposed nine-month project should be:

A final report: Texas Occupational Program Curriculum and Objectives Bank (TOPCOB), containing

(a) the ten core-curriculums of the selected programs

(b) indexed objective banks for the ten selected programs

(c) the successful standardized format, and methodology developed by the project, for replication use

(d) recommendations for additional research

(e) recommendations for dissemination

It is suggested that the above project, at an estimated cost of approximately $25,000 to $30,000, would accomplish the initial goals of the original project through a redirection of efforts based on the findings and conclusions of the summer grant work.

APPENDIX I

Austin
Community
College

901 NEAL STREET
AUSTIN, TEXAS 78702
512/476-6381

Austin Community College is conducting a project, under a TEA grant, to compile an annotated list of individualized instructional materials currently being used in certain vocational and technical areas in community junior colleges in Texas. This list is to be available for the use of any colleges which may wish to know where such materials are being developed and used.

To this end, we are asking that you complete the enclosed form, so that we may communicate with the appropriate department chairmen. In addition, we would appreciate any comments you might offer about the extent of individualization in these or other occupational programs at your college.

It would be helpful, too, if you could have a copy of your current college catalog sent to us.

Thank you very much.

Yours very truly,

William H. Scott
Project Director

Mr. Oscar Millican
Occupational Research and Development
Texas Education Agency
Austin, Texas

Dear Mr. Millican:

The TEA-Funded study, "Compilation and Annotation of Information About Current Individualized Instruction in Vocational-Technical Education in Texas Community/Junior Colleges and Development of Missing Components", (project/contract #62350238), has had four principal objectives. Here is a review of those objectives:

a. To establish criteria for usefulness of materials (for individualized instruction) and determine usefulness by applying pre-determined criteria.
-A careful definition of what comprises "individualized instruction" has been developed and field tested successfully. The project's Final Report will delineate this definition and explain its applications and uses, together with its evaluation elements.

b. To identify vocational-technical areas for which adequate materials (individualized) do not now exist.
-Extensive samplings of programs across the entire state show that adequate materials suitable for replication do not now exist for <u>any</u> program type.

c. To develop a comprehensive listing of individualized instructional materials available to instructors of vocational courses in community colleges.
-This objective proved to be unobtainable due both to the almost complete lack of acceptable written objectives found for programs surveyed, and to the extremely wide variations found to exist between supposedly similar, but actually often drastically different, programs.

d. To recommend a dissemination system for providing information about materials and their effectiveness to program directors of vocational-technical courses.
-In order to recommend dissemination, something must be discovered with some elements of universality allowing replication. No such presently existing program materials were found.

The central purpose of this study was two-fold:

(1) To tie down exactly what individualized instruction is, by constructing a careful definition, and a set of evaluative criteria; and

(2) To discover such successfully operating individualized programs as might be copied by other schools to advantage, collecting materials from such programs and lodging them at the state level for reference.

Additionally, it was predicted that some few areas might need the special attention of writers to develop materials where none yet existed.

The experience of this project shows first, that there is such a paucity of written individualized materials in postsecondary vocational-technical programs that any team of writers attempting to fill the gaps would be confronted with an overwhelming and impossible task. Therefore, the $20,000.00 portion of the grant set aside for this part of the project is hereby deobligated and thus effectively returned to TEA by Austin Community College.

The plan for the discovery of successful individualized programs suitable for replication by other schools presupposes that the numerous similarly-to-identically titled occupational education programs of the state have some common core of knowledge tieing them to very similar objectives.

Project experience shows the above supposition to be absolutely erroneous. Extremely wide variation was found to exist across the state between objectives, contents, methodologies, etc., of programs with titles suggesting similarity. It became obvious through this study that very little coordinative direction or core standards now exist for any given program type.

Therefore, the success of this project centers as follows:

a. An excellent, useable, clearly stated definition and description of a real "individualized instructional program" has been designed, with evaluative criteria, and successfully field tested.

b. A problem has been clearly identified for further study and attention: there are no state core-curriculums or common base-level standards now existing, or common objectives anywhere stated for any program area of postsecondary vocational and technical education, state-wide.

c. A recommendation has been developed to attack the identified problem: a state-level bank of program core-curriculums and objectives should be developed to provide guidance to local administrators in development of new programs, and to provide standards for consideration of the programs so developed.

There will be a new Project Proposal developed to attack the problem discussed above, based on the stated recommendation. There will also be a detailed report of the entire project now nearing completion, including more specific data supporting the statements made in this preliminary summary.

Yours truly,

Dr. Charles D. Rorie
Project Director

DESCRIPTIVE NOTE: 70P.; RELATED DOCUMENTS VT 103 321 THROUGH VT 103 335 IN THIS ISSUE.

ABSTRACT: THIS REPORT RELATES THE FINDINGS OF A STATEWIDE FOLLOWUP SURVEY OF 1973-74 HEALTH OCCUPATIONS TERMINEES FROM THE SECONDARY SCHOOL VOCATIONAL PROGRAMS OF ALABAMA. A TOTAL OF 269 STUDENT TERMINEES WERE MAILED QUESTIONNAIRES AFTER BEING OUT OF SCHOOL APPROXIMATELY SEVEN TO EIGHT MONTHS. RETURNS WERE RECEIVED FROM 111 (41.3 PERCENT) OF THE HEALTH OCCUPATIONS TERMINEES. DATA ARE PRESENTED IN TABLES WITH ACCOMPANYING NARRATIVE ORGANIZED ACCORDING TO THESE MAJOR SECTIONS: GENERAL INFORMATION ON THE TERMINEES; BASIC INFORMATION RELATED TO THE VOCATIONAL PROGRAMS; BASIC EMPLOYMENT INFORMATION; CONTINUING EDUCATION INFORMATION; AND JOB PLACEMENT INFORMATION. PRESENT AND FIRST JOB TITLES OF THE HEALTH OCCUPATIONS TERMINEES ARE APPENDED. (NJ)

FOLLOW-UP OF 1973-74 HEALTH OCCUPATIONS
TERMINEES FROM THE SECONDARY SCHOOL
VOCATIONAL PROGRAMS OF ALABAMA

Alabama continues to support one of the most progressive and comprehensive vocational education programs in the nation. In addition to serving youth and adults by training them for gainful and useful employment, the diversification of vocational courses meets a serious job need and contributes to the industrial development in the state.

With the millions of tax dollars being spent on vocational education, it is necessary to attempt to account to the taxpayer and decision-makers on the results of those expenditures. Terminee student follow-up studies constitute one of the most valuable techniques for assessing vocational education system outcomes.

The Alabama State Department of Education, Division of Vocational Education and Community Colleges, recognizing this important phase of accountability and evaluation, initiated the development of a statewide follow-up system for its vocational education program terminees at the secondary school level. The Division, under the direction of Dr. T. L. Faulkner, State Director, contracted with the Occupational Research and Development Unit at Auburn University to develop and implement the statewide follow-up system for all its secondary vocational terminees in all service areas.

This report relates the findings of the survey instrument mailed to the 1973-74 Health Occupations terminees from the secondary school

vocational programs of Alabama. When the terminees received the questionnaire, most had been out of school seven to eight months.

General Information

Student rosters with names and addresses of 1973-74 Health Occupations terminees were received from 13 secondary school vocational teachers in Alabama. Of the 13 teachers from which student rosters were received, nine were in Secondary Area Vocational Centers (AVC) and four were in programs in schools of other settings. The total of 269 student terminees reported to the ORDU were mailed the follow-up forms. Returns were received from 111 (41.3%) of the Health Occupations terminees from the initial mailing and one follow-up. At least one student questionnaire was received from each of the 13 programs.

All terminees reported in this study were in programs administered only by the Division of Health Occupations Education, State Department of Education.

Table 1 presents data relative to the total population of Health Occupations terminees and the number of returns categorized by OE codes as reported by teachers.

TABLE 1

DESCRIPTION OF TOTAL POPULATION AND RETURNS
BY OE CODE OF 1973-74 HEALTH
OCCUPATIONS TERMINEES[A]

OE Code[B]	Occupational Title	Total Number of Students	Percent of Health Students by OE Code	Number of Returns	Percent of Returns for OE Code Area
07.0000	General Health	10	3.7	3	30.0
07.0103	Dental Lab Technician	5	1.9	2	40.0

07.0800	Mental Health Technology	2	0.7	1	50.0
07.0906	Health Aid (Co-op)	223	82.9	99	44.4
07.9900	Health Cluster	17	6.3	2	11.8
99.0103	Career Guidance	11	4.1	3	27.3
	TOTAL ALL AREAS	269	100.0	111	41.3

[A] These Health Occupations terminees were terminees in programs administered only under the service area of Health Occupations Education, State Department of Education.

[B] OE Codes as reported by teachers.

Of the 1973-74 Health Occupations terminees reported by the teachers, the largest number in any OE code was in the occupational title area of Health Aid (Co-op). This 223 represented 82.9 percent of the reported Health Occupations terminees. There were 17 (6.3%) terminees listed as studying Health Clusters. The combined enrollment of Health Aid (Co-op) and Health Clusters was 240, and this represented 89.2 percent of the total enrollment in the Health Occupations area.

Table 1A is a description of total population and returns by OE Code area, type school, and termination status of the 1973-74 health occupations terminees.

Basic Information Related to the Vocational Education Program

Table 6 points out the number of 1973-74 Health Occupations terminees who indicated whether this vocational program was a school requirement.

TABLE 6

1973-74 HEALTH OCCUPATIONS TERMINEES WHO INDICATED WHETHER THEIR VOCATIONAL PROGRAM WAS A SCHOOL REQUIREMENT

Vocational Courses Was a School Requirement	Number	Percent
Yes	3	2.7
No	106	95.5
No Response	2	1.8
Total	111	100.0

Table 7 indicates, according to the 1973-74 Health Occupations terminees, the primary source of influence in selecting their vocational course.

TABLE 7

PRIMARY INFLUENCES ON THE 1973-74 HEALTH OCCUPATIONS TERMINEES IN SELECTING THEIR VOCATIONAL COURSE

Group or Individual Terminees Felt Influenced Them Most in Selecting Vocational Course	Number	Percent
Parent(s) or Guardian(s)	11	9.9
Guidance Counselor	10	9.0
Your Vocational Teacher	8	7.2
Another Teacher or Principal	1	0.9
Student in VED Program	6	5.4
A Friend or Relative	66	5.4
A Businessman	0	0.0
Made Choice Yourself	68	61.3
Other (husband)[A]	1	0.9
No Response	0	0.0
TOTAL	111	100.0

[A]See page 10 for listing of "Others" who influenced health terminees in selecting their VED course.

Parents or Guardians appeared to be the greatest outside influence on those terminees enrolling in the Health Occupations program. Eleven (9.9%) of the terminees responding indicated that their Parent(s) or Guardian(s) influenced them most in selecting their Health Occupations course. However, 68 (61.3%) indicated that they selected their course of study on their own. Ten terminees (9.0%) indicated that a guidance counselor influenced them most in selecting their program. Eight (7.2%) of the terminees indicated that their vocational teacher influenced them most in selecting their course in Health Occupations.

Below is the response given to the "Others" category indicated in Table 7 as to the primary source of influence in selecting her vocational course.

"Other" Persons or Groups Who Most Influenced Terminees in Selecting Their VED Course	Number
My Husband	

Table 8 indicates terminees' opinions as to whether they had adequate job or occupational information and school experiences to make as realistic career choice.

TABLE 8

OPINIONS OF 1973-74 HEALTH OCCUPATIONS TERMINEES AS TO WHETHER THEY HAD ADEQUATE JOB OR OCCUPATIONAL INFORMATION AND SCHOOL EXPERIENCES TO MAKE A REALISTIC CAREER CHOICE

	Number	Percent
Yes	96	86.5
No	12	10.8
No Response	3	2.7
TOTAL	111	100.0

Table 9 indicates whether, during the time they were taking their high school vocational program, the reporting 1973-74 terminees intended to get a job in Health Occupations.

TABLE 9

INDICATIONS OF 1973-74 HEALTH OCCUPATIONS TERMINEES AS TO WHETHER, DURING THE TIME THEY WERE TAKING THEIR HIGH SCHOOL VED PROGRAM, THEY PLANNED TO GET A JOB IN THEIR AREA OF STUDY

Intended To Get Job In Area of Study	Number	Percent
Yes	66	59.5
No	13	11.7
Was Not Sure	32	28.8
No Response	0	0.0
TOTAL	111	100.0

It is interesting to note that only 66 (59.5%) of the 1973-74 reporting Health Occupations terminees indicated that during the time they were taking their Health Occupations program, they intended to get a job in the area they were studying.

Table 10 indicates terminees' opinions on choosing the Health Occupations program if they had the selection to make again.

A noteworthy point was revealed by the data. Of the 1973-74 Health Occupations terminees, 92 (82.9%) indicated that they would select the same vocational program if they had the choice to make again. Only seven (6.3%) of the responding terminees indicated that they would not take a vocational program.

TABLE 10

OPINIONS OF 1973-74 HEALTH OCCUPATIONS TERMINEES REGARDING THEIR VOCATIONAL PROGRAM

Question: If You Had It To Do Over Again, Would You...?	Number	Percent
Take the same vocational program	92	82.9
Not take a vocational program	7	6.3
Choose another vocational program offered in your school, such as _____ [A]	6	5.4
Choose another vocational program if it had been offered in your school, such as _____ [B]	4	3.6
No Response	2	1.8
TOTAL	111	100.0

[A]See listing IA below for those other vocational programs offered in terminees' school that they would have taken instead of their health programs.

[B]See listing IB below for the vocational programs the terminee would have taken instead of their health program if it had been offered in their school.

Listing I-A -- Courses offered in their school that Health Occupations terminees indicated they would have taken if they had it all to do over again.

1. Business Office Education
2. Unit Clerk
3. Nursing
4. DECA
5. Body and Fender Repair
6. Business

Listing I-B -- Courses Health Occupations terminees indicated they would have taken if they had it all to do over again and the course were offered in their school.

1. Architect
2. Sewing
3. Cosmetology
4. Take a more advanced nursing program

Table 11 indicates the extent to which the reporting 1973-74 Health Occupations terminees felt their high school vocational programs prepared them for their first job. This data was also broken down by how that first job related to their vocational program.

Terminees who were in full-time active military service or who had never been employed were not asked to respond to the questions from which this data was reported. Also, the terminees who failed to respond to the question items were not indicated in the table.

TABLE 11

PERCEPTIONS OF 1973-74 HEALTH OCCUPATIONS TERMINEES AS TO THE EXTENT THEIR HIGH SCHOOL VOCATIONAL PROGRAM PREPARED THEM FOR THEIR FIRST FULL-TIME JOB BY HOW FIRST FULL-TIME JOB RELATED TO TRAINING

Extent Vocational Course Prepared for First Full-Time Job	Total Reporting		Number Reporting by Relatedness of First Full-Time Job to Training Received					
			Directly Related		Somewhat Related		Not Related	
	No.	%	No.	%	No.	%	No.	%
Excellent	7	18.5	5	33.3	2	33.3	0	0.0
Well Prepared	11	28.9	8	53.3	2	33.3	1	5.9
Fair	4	10.5	0	0.0	2	33.4	2	11.8

Preparation not related to job	13	34.2	1	6.7	0	0.0	12	70.5
TOTAL	38	100.0	15	100.0	6	100.0	17	100.0

In noting the extent to which the 1973-74 Health Occupations terminees felt their high school vocational course prepared them for their first full-time job by how their first full-time job related to the

training they received in their high school health program, some interesting points were revealed. Eighteen (47.4%) of the 1973-74 Health Occupations terminees responding to this item indicated "Excellent" or "Well Prepared" for their first full-time job as a result of the training received in their high school vocational education program. Thirteen (86.6%) of the 15 terminees employed in their first full-time job related directly to their training felt they were excellent or well prepared for this first job. Only one terminee who was working in an area directly related to his vocational training felt that he was poorly prepared for his first job. There was an additional terminee who indicated that he was working in an area directly related to his vocational course and felt that his preparation did not related to his job. Of all the responding terminees, only three (7.9%) felt that they were poorly prepared for their first full-time job. Of these, only one was working in an area directly related to his vocational course.

Table 12 indicates the extent to which the reporting 1973-74 Health Occupations terminees felt their high school vocational course prepared them for their present job. Also shown in the table is a breakdown of the data by how their present job was related to their vocational program.

Terminees in active full-time military service, and students who were attending school full time and had not had a job, were not asked to respond to the question from which Table 12 was prepared. Also, those other students who failed to respond to the items were not shown on the table.

Of the 40 terminees responding to these items, 18 (45.0%) indicated "Excellent" or "Well Prepared" for their present job as a result of their high school vocational program. No terminee reported feeling poorly prepared for his present job as a result of his training.

TABLE 12

PERCEPTIONS OF 1973-74 HEALTH OCCUPATIONS TERMINEES AS TO THE EXTENT THEIR HIGH SCHOOL VOCATIONAL COURSE PREPARED THEM FOR THEIR PRESENT JOB BY HOW THEIR PRESENT JOB RELATED TO TRAINING

TOTAL	40	100.0	13	100.0	7	100.0	20	100.0

[A]See listing below for reasons terminees specified for only being trained "Fair" by their vocational course for their present job.

Thirteen (100.0%) of the 13 responding terminees working in an area directly related to their high school vocational program indicated that they felt excellent or well prepared by their training.

Two terminees who indicated "fair" as the extent their vocational program prepared them for this present job indicated reasons for this. The following lists the reasons the 1973-74 Health Occupations terminees indicated for being trained only "fair" by their vocational course for their present job.

1. Not a good book to teach the course with

2. Not closely related

None of the terminees who indicated they were "poorly prepared" for their present job by their vocational program gave reasons why they felt that way.

Table 13 focuses on the Health Occupations student club. The researchers sought to determine the extent to which the 1973-74 Health Occupations terminees felt that their high school student club aided in preparing them for their present job. Data are also broken down by the relationship of the present job to the vocational training received.

TABLE 13

PERCEPTIONS OF 1973-74 HEALTH OCCUPATIONS TERMINEES AS TO THE EXTENT THEIR HIGH SCHOOL VOCATIONAL STUDENT CLUB PREPARED THEM FOR THEIR PRESENT JOB BY HOW THEIR PRESENT JOB RELATED TO TRAINING[A]

Extent High School Vocational Student Club Helped Prepare for Present Job	Total Reporting		Total Reporting by Relatedness of Present Job to Vocational Training					
			Directly Related		Somewhat Related		Not Related	
	No.	%	No.	%	No.	%	No.	%
Excellent	4	23.5	2	20.0	1	33.3	1	25.0
Well Prepared	9	52.9	7	70.0	2	66.7	0	0.0
Fair	2	11.8	0	0.0	0	0.0	2	50.0
Poorly Prepared	2	11.8	1	10.0	0	0.0	1	25.0
TOTAL	17	100.0	10	100.0	3	100.0	4	100.0

[A]Of the 42 who responded, 7 (16.6%) had no related student club available, and 18 (42.9%) were not members of a related student club.

Only respondents who had had a job since terminating their high school vocational health program were asked to respond to the question reported in Table 13. Students in active full-time military service

were excluded. Seven (16.6%) of the 42 terminees reported no related student club was available, while 18 (42.9%) were not members of a related student club.

Thirteen (76.4%) of the 17 terminees who participated in student club activities indicated they were "Excellent" or "Well Prepared" by their related student club for their present job. Two (11.8%) indicated they were "Poorly Prepared" by their related student club for their present job. Of those two, one (50.0%) was in a related job, while one (50.0%) was in a non-related job.

Of those terminees who were working in an area directly related to the training they received in their high school vocational program, nine (90.0%) revealed that they were "Excellent" or "Well Prepared" for their present job by their related student club. Only one (10.0%) of the ten terminees who were working in a job directly related to the training they received indicated he was "Poorly Prepared" for his present job by his related student club.

Table 14 reports how the 1973-74 Health Occupations terminees rated the quality of teaching by their high school vocational instructors.

TABLE 14

1973-74 HEALTH OCCUPATIONS TERMINEES' RATINGS OF THE QUALITY OF TEACHING BY THEIR HIGH SCHOOL VOCATIONAL INSTRUCTORS

Rating	Number	Percent
Excellent	51	46.0
Good	46	41.4
Fair	8	7.2
Poor	1	0.9
Very Poor	4	3.6
No Response	1	0.9
TOTAL	111	100.0

Ninety-seven (87.4%) of the 111 reporting 1973-74 Health Occupations terminees rated the quality of teaching by their vocational instructor either "Good" or "Excellent." Only five (4.5%) rated the quality of teaching by their instructors "Poor" or "Very Poor."

Table 15 illustrates how the 1973-74 Health Occupations terminees rated their high school vocational instructor's interest in their class work.

TABLE 15

1973-74 HEALTH OCCUPATIONS TERMINEES' RATINGS OF THEIR HIGH SCHOOL VOCATIONAL INSTRUCTOR'S INTEREST IN THE STUDENT'S CLASS WORK

Rating	Number	Percent
Excellent	60	54.1
Good	39	35.1
Fair	8	7.2
Poor	1	0.9
Very Poor	2	1.8
No Response	1	0.9
TOTAL	111	100.0

Ninety-nine (89.2%) of the 111 reporting 1973-74 Health Occupations terminees rated the interest exhibited by their high school vocational instructor in their class work as "Good" or "Excellent." Only three (2.7%) of the terminees rated the interest their vocational instructors showed in their class work as "Poor" or "Very Poor."

Table 16 points out how the 1973-74 Health Occupations terminees subjectively rated the knowledge their vocational teachers possessed about their field of study. This rating is also shown in the table by

a breakdown of how the terminees' present job related to the training they received in their high school vocational program. Terminees were asked to base their judgments on their current knowledge of their job and responsibilities.

TABLE 16

1973-74 HEALTH OCCUPATIONS TERMINEES' RATINGS OF THE KNOWLEDGE THEIR HIGH SCHOOL VOCATIONAL TEACHER POSSESSED ABOUT THEIR FIELD OF STUDY BY HOW THE TERMINEES' PRESENT JOB RELATED TO THE TRAINING THEY RECEIVED

Ratings[A]	Total Reporting		Number Reporting by Relatedness of Present Job to Training Received					
			Directly Related		Somewhat Related		Not Related	
	No.	%	No.	%	No.	%	No.	%
Excellent	15	37.5	7	50.0	1	14.2	7	36.8
Good	16	40.0	6	42.9	3	42.9	7	36.8
Fair	9	22.5	1	7.1	3	42.9	5	26.4
Poor	0	0.0	0	0.0	0	0.0	0	0.0
Very Poor	0	0.0	0	0.0	0	0.0	0	0.0
TOTAL	40	100.0	14	100.0	7	100.0	19	100.0

[A]Ratings were to be based on terminee's judgment of their current knowledge of their job and responsibilities.

Total responses to this item indicates that 31 (77.5%) of the 40 responding 1973-74 Health Occupations terminees rated the knowledge their vocational teachers possessed about their field of study either "Good" or "Excellent." For those 14 terminees working in an area directly related to the training they received, 13 (92.9%) rated the

knowledge their teachers possessed about their field of study as "Good" or "Excellent." A favorable point was revealed in that none of those terminees rated the knowledge their vocational teachers possessed about their field of study as "Poor" or "Very Poor."

If the respondent was working in an area related to his training, he was asked to compare the facilities and equipment in his high school vocational program with those on his present job. Table 17 illustrates how the 1973-74 Health Occupations terminees responded.

TABLE 17

HOW 1973-74 HEALTH OCCUPATIONS TERMINEES WORKING IN A RELATED AREA RATED THE FACILITIES AND EQUIPMENT IN THEIR HIGH SCHOOL VOCATIONAL PROGRAM[A]

Rating[B]	Number	Percent
Better than those on present job	1	4.4
Similar to those on present job	13	56.5
Not as good as those on present job	9	39.1
TOTAL	23	100.0

[A]Twenty-three (50.0%) of the responding 46 terminees indicated that their present job was not related to their vocational training enough to compare facilities and equipment.

[B]Persons who had not had a job since leaving their vocational program, including those in military service and those who attended school, were asked not to respond to questions from which data was drawn. Returns were received from 111 terminees.

Only one (4.4%) of the 23 responding 1973-74 Health Occupations terminees working in an area related to their training rated the facilities and equipment in his high school vocational program as better than those on his present job. Thirteen (56.5%) rated the facilities

and equipment in their high school vocational program as similar to those on their present job; however, nine (39.1%) rated the facilities and equipment not as good as those on their present job.

Table 18 shows how 1973-74 Health Occupations terminees, who were in a cooperative work program in school and were now working in an area related to their vocational training, rated the facilities and equipment used in their cooperative work station.

TABLE 18

HOW 1973-74 HEALTH OCCUPATIONS TERMINEES NOW WORKING IN A RELATED AREA, WHOSE VOCATIONAL PROGRAM INCLUDED COOPERATIVE WORK, RATED FACILITIES AND EQUIPMENT USED IN THEIR COOPERATIVE WORK STATION[A]

Rating[B]	Number	Percent
Better than those on present job	1	5.0
Similar to those on present job	10	50.0
Working at same place where cooperative training was done	7	35.0
Not as good as those on present job	2	10.0
TOTAL	20	100.0

[A]Four (9.3%) of the responding 43 Health Occupations terminees indicated their vocational program was not a cooperative program. Nineteen (44.2%) terminees indicated they were not working in an area related to their cooperative work; therefore, they did not complete this item on the questionnaire.

[B]Persons who had not had a job since leaving their vocational program, including those in military service and those attending school, were asked not to respond to questions from which data was drawn. Returns were received from 111 terminees.

Only one (5.0%) of the 20 responding 1973-74 Health Occupations terminees whose vocational programs had included cooperative work and were now working in an area related to their vocational training, rated

the facilities and equipment in his cooperative work station as better than those on his present job. Ten (50.0%) rated the facilities and equipment in their cooperative training station as similar to those on their present job. Only two (10.0%) rated the facilities and equipment in their cooperative work station not as good as those in their present job. It was significant to note that seven (35.0%) indicated they were working at the same establishment where they did their cooperative training.

Basic Employment Information

The following section of this report offers information relative to employment and job characteristics of the 1973-74 secondary Health Occupations terminees.

Table 19 illustrates the number of full-time jobs the responding 1973-74 Health Occupations terminees have had since leaving their high school vocational course.

TABLE 19

NUMBER OF FULL-TIME JOBS HELD BY THE 1973-74 HEALTH OCCUPATIONS TERMINEES SINCE LEAVING THEIR HIGH SCHOOL VOCATIONAL COURSE

Number of Full-Time Jobs Held	Number	Percent[A]
One	39	35.1
Two	2	1.8
Three	0	0.0
Four	0	0.0
Five or more	0	0.0
TOTAL	41	36.9

[A]Percentage is based on the 111 terminees who returned the questionnaire.

There were 39 (35.1%) of the total 111 responding 1973-74 Health Occupations terminees who had been employed in just one job since leaving their high school vocational program. Only two (1.8%) of the terminees reported having two or more jobs since leaving their high school vocational course seven to eight months ago.

Table 20 reveals the first-job employment status of Health Occupations terminees who returned the survey by the relatedness of their vocational training to their first job.

TABLE 20

FIRST-JOB EMPLOYMENT STATUS OF HEALTH OCCUPATIONS TERMINEES (1973-74) BY RELATEDNESS OF VOCATIONAL TRAINING TO FIRST JOB[A]

First Job After Leaving High School Vocational Program	Total Reporting		Relatedness of Vocational Training to First Job[B]					
			Directly Related		Somewhat Related		Not Related[C]	
	No.	%	No.	%	No.	%	No.	%
Full-Time	27	24.3	8	7.2	6	5.4	13	11.7
Part-Time	16	14.4	8	7.2	1	0.9	7	6.3
TOTAL	43	38.7	16	14.4	7	6.3	20	18.0

[A]All percentages were based on the 111 (41.3%) of 269 terminees who returned the survey form.

[B]The terminees made the judgment as to how their first job was related to the training received in their high school vocational program.

[C]See page 24 for reasons terminees who were working in first job unrelated to this vocational training gave for not seeking job that was related before accepting their first job.

Of the 111 responding 1973-74 Health Occupations terminees, 27 (24.3%) were employed full time in their first job after leaving their high school

vocational program. Sixteen terminees' first jobs were on a part-time basis.

Sixteen (14.4%) of the 111 responding terminees' first jobs (full-time or part-time) were in an area directly related to the training they received in their high school vocational course. Seven (6.3%) were employed in an area somewhat related while 20 (18.0%) were employed in a first job not related to the training they received. The terminees made the judgment as to how their first job was related to the training they received in their high school vocational program.

Of the 20 terminees who indicated their jobs were not related to their vocational course, six (30.0%) terminees indicated that before they accepted their unrelated job, they tried to get a job that was related to their vocational training. However, 14 (70.0%) of the terminees did not.

The following is a list of reasons given by 5 of the 14 terminees who, before taking their first unrelated job indicated they did not seek a job that was related to their vocational training.

Reasons	Number
Because I wanted to go on to school	1
Have not had enough training	1
I worked at plywood plant	1
I knew that _____ _____ factory (shirt) paid more than a nurse's aid would	1
Was not taking course	1

Table 21 shows by OE Code for the first job of the 1973-74 Health Occupations terminees the relatedness of their training to this first job.

TABLE 21

1973-74 HEALTH OCCUPATIONS TERMINEES' FIRST JOB BY OE CODE STUDIED AND RELATEDNESS OF TRAINING[A]

OE Code	Title of Occupational Objective Studied	Total Employed by Area Studied		Relatedness of Training to First Job[B]					
				Directly Related		Somewhat Related		Not Related	
		No.	%	No.	%	No.	%	No.	%
07.000	General Health	1	2.1	0	0.0	0	0.0	1	100.0

07.9900	Health Cluster	2	4.3	0	0.0	0	0.0	2	100.0
99.0103	Career Guidance	1	2.1	0	0.0	1	100.0	0	0.0
	TOTAL ALL AREAS	47	100.0	17	36.2	8	17.0	22	46.8

[A]Of 269 Health Occupations terminees, 111 (41.3%) returned the questionnaire.

[B]The terminees made the judgment as to how their first job was related to the training received in their high school vocational program.

Of the 47 responding 1973-74 Health Occupations terminees who indicated how their first job related to the training they received in their high school vocational program, 17 (36.2%) were employed in directly related areas. Eight (17%) were employed in somewhat related areas while 22 (46.8%) terminees were employed in areas not related to their training.

The terminees made the judgment as to how their first job was related to the training received in their high school vocational program.

More responding terminees who studied in Health Aid (Co-op) (OE Code 07.0906) indicated first job employment. This was to be expected since more terminees studied in this occupational objective area (See Table 1). Of the 39 employed 1973-74 terminees who studied in the Occupational area of Health Aid (Co-op) and indicated relatedness of training, 15 (38.5%) were employed in an area directly related to that training. Six (15.4%) were employed in their first job in an area somewhat related to their training. However, 18 (46.1%) of these responding terminees indicated that their first job was not related to the training they received in their Health Occupations program.

Table 21A is a description of 1973-74 Health Occupations terminees' first job by OE code area studied, number of returns, type school, termination status, and relatedness of training.

TABLE 21A

[A]OE Code areas as reported by teachers
[B]Area Vocational Centers
[C]Any terminee who left the program by completing or by high school graduation
[D]Any terminee who the instructor reported as having dropped out of school
[E]The terminees made the judgment as to how their first job was related to the training received in their high school vocational program

Table 22 illustrates the current employment status of the responding terminees by the relatedness of their vocational training to their present jobs. All percentages figured in the table were based on the 111 (41.3%) returns from the 269 Health Occupations terminees.

Of the 111 responding 1973-74 secondary Health Occupations terminees, 21 (18.9%) were presently employed full time and not attending school or employed full time and attending school. Twelve (10.8%) of the terminees were employed part time and attending school, while 16 (14.4%) were unavailable for employment (See page 31 for reasons terminees were unavailable for employment). Only 16 (14.4%) of the terminees were unemployed and actively seeking employment, while three (2.7%) were employed part time and seeking full-time employment.

TABLE 22

CURRENT EMPLOYMENT STATUS OF HEALTH OCCUPATIONS TERMINEES (1973-74) BY RELATEDNESS OF TRAINING TO PRESENT JOB[A]

Employment Status	Total Responding		Relatedness of Training to Present Job[B]							
			Directly Related		Somewhat Related		Not Related[E]		Employed No Response	
	No.	%	No.	%	No.	%	No.	%	No.	%
Employed full time and not attending school	19	17.1	4	3.6	6	5.4	8	7.2	1	0.9
Employed full time and attending school	2	1.8	1	0.9	0	0.0	1	0.9	0	0.0
Employed part time and seeking full-time job	3	2.7	0	0.0	0	0.0	3	2.7	0	0.0
Employed part time and not seeking full-time job	2	1.8	1	0.9	0	0.0	1	0.9	0	0.0
Employed part time and attending school	12	10.8	4	3.6	1	0.9	5	4.5	2	1.8
Unemployed (actively seeking a job)[C]	16	14.4	N/A		N/A		N/A		N/A	
Unavailable for employment[C&D]	16	14.4	N/A		N/A		N/A		N/A	
No Response	41	36.9	N/A		N/A		N/A		N/A	
TOTAL	111	100.0	10	9.0	7	6.3	18	16.2	3	2.7

[A] All percentages were based on the 111 (41.3%) respondents of the total 269 terminees. Terminees in active full-time military service or attending school full-time and had never been employed were included in the "No Response" category.

[B] The terminees made the judgment as to how their present job was related to the training received in their high school vocational program.

[C] The unemployed and unavailable for employment categories do not include persons in the military service and persons who were in school full time and never had a job.

[D] See page 28 for the listing of reasons Health Occupations terminees gave for being unavailable for employment.

[E] See page 29 for reasons terminees who were working in present job not related to vocational training gave for not seeking related job before accepting present job. Totals for unrelated columns may not correspond because terminees failed to respond to one of the two questions from which data was drawn.

The "No Response" category in Table 22 includes three groups: (1) terminees in active full-time military service; (2) terminees who were in school full time and had never had a job; and (3) terminees who failed to respond to the item on the questionnaire.

Of the 111 secondary Health Occupations respondees, 10 (9.0%) were presently employed full time or part time in an area directly related to the training received in their high school vocational course. Seven (6.3%) were employed either part time or full time in an area somewhat related to their training, while 18 (16.2%) were employed in areas not related to training. The terminees made the judgment as to how their present employment was related to the training received in their high school vocational course.

Below is a list of the reasons given by the terminees for being unavailable for employment.

Reason	Number
In school full time	13
Presently not working, not interested in a job	0
Homemaker	2
Pregnancy	6
Illness or disability	1
Other	2

Of the 22 terminees who indicated their present jobs were not related to their vocational course, 12 (54.5%) terminees indicated that before they accepted their unrelated job, they tried to get a job that was related to their vocational training. However, 10 (45.5%) of the terminees did not.

The following is a list of reasons given by eight of the ten terminees who, before taking their present unrelated job, indicated they did not seek a job that was related to their vocational training.

Reason	Number
Did not want to work in medical field	1
I did not enjoy the lack of guidance and care at local hospitals	1
Requires too many years of school	1
Already had job	1
Because I could not	1
I was not interested	1
Instead of attending school, I preferred vocational training	1

Table 23 shows for the present job, by OE code, the number of 1973-74 secondary Health Occupations terminees employed by the relatedness of their vocational training to their present job.

Of the 41 secondary Health Occupations terminees who indicated present employment, 33 (80.5%) who studied in the area of Health Aid (Co-op), OE Code 07.0906, were employed. This represented the largest number of employed terminees that studied in any OE Code area.

Of the 33 terminees presently employed that studied Health Aid (Co-op), 12 (36.4%) were employed in an area directly related to the training received in their high school vocational program. Sixteen (48.5%) terminees who studied in Health Aid (Co-op) indicated their present job was not related to their high school vocational training. The terminees made the judgment as to how their present job related to the training received in their high school vocational program.

[A]OE Code areas as reported by teachers

[B]Area Vocational Centers

[C]Any terminee who left the program by completing or by high school graduation

[D]Any terminee who the instructor reported as having dropped out of school

[E]The terminees made the judgment as to how their first job was related to the training received in their high school vocational program.

Table 24 indicates the first job salary ranges as compared to the present job salary ranges for the 1973-74 Health Occupations terminees.

TABLE 24

FIRST-JOB SALARY RANGES AND PRESENT-JOB SALARY RANGES FOR 1973-74 HEALTH OCCUPATIONS TERMINEES

Salary Ranges	First Job		Present Job	
	No.	%	No.	%
Under $250	26	60.5	15	57.7
$250 - $299	5	11.6	2	7.7
$300 - $349	9	20.9	6	23.0
$350 - $399	2	4.7	2	7.7
$400 - $449	0	0.0	1	3.9
$450 - $499	0	0.0	0	0.0
$500 - $599	1	2.3	0	0.0
$600 - $699	0	0.0	0	0.0
$700 or more	0	0.0	0	0.0
TOTAL	43	100.0	26	100.0

Of the 43 terminees reporting a salary range for their first job, 26 (60.5%) indicated a range of under $250 per month. No terminee reported a first salary of over $600 per month. The median salary range for the first job fell in the range of under $250 per month. The mean salary range for the first job also fell in the range of under $250 per month.

Of the 26 1973-74 Health Occupations terminees reporting a salary range for their present job, 15 (57.5%) indicated under $250 per month. This salary range was indicative of the mode of the reporting students. The median and mean salary ranges for the present job also fell within the range of $250 per month or less. The median and mean salary ranges of present jobs over first jobs do not indicate a considerable increase for the reporting Health Occupations terminees.

Table 24A indicates the first-job salary ranges by relatedness of training and sex of the Health Occupations terminees.

TABLE 24A

FIRST-JOB SALARY RANGES BY RELATEDNESS OF TRAINING
OF 1973-74 HEALTH OCCUPATIONS
TERMINEES BY SEX

Salary Ranges	Sex of Terminees Responding		Relatedness of Training to First Job[B]					
			Directly Related		Somewhat Related		Not Related	
	Male	Female	Male	Female	Male	Female	Male	Female
Under $250	5	19	2	8	-	3	3	8
$250 - $299	1	4	1	1	-	2	-	1
$300 - $349	2	6	-	3	-	1	2	2
$350 - $399	1	1	-	-	1	-	-	1
$400 - $449	-	-	-	-	-	-	-	-
$450 - $499	-	-	-	-	-	-	-	-
$500 - $599	-	1	-	-	-	-	-	1
$600 - $699	-	-	-	-	-	-	-	-
$700 or more	-	-	-	-	-	-	-	-
TOTAL[A]	9	31	3	12	1	6	5	13

[A]Totals do not match those of Table 24 because some terminees did not respond to all questions.

[B]The terminees made the judgment as to how their first job was related to the training received in their high school vocational program.

Twenty-four (60.0%) of the 40 responding terminees were employed at less than $250 per month. Of these 24 terminees, two (8.4%) males and eight (33.3%) females were employed in a job directly related to their training, three (12.5%) females were employed in jobs somewhat related to their training, while three (12.5%) males and eight (33.3%) females were employed in jobs not related to their training.

Of the 40 responding terminees, nine (22.5%) were males and 31 (77.5%) were females. Three (7.5%) males and 12 (30.0%) females were employed in jobs directly related to their vocational training, one (2.5%) male and six (15.0%) females were employed in jobs somewhat related to their training, while five (12.5%) males and 13 (32.5%) females were employed in jobs not related to their training.

Table 24B indicates the present-job salary ranges by relatedness of training and sex of the Health Occupations terminees.

TABLE 24B

PRESENT-JOB SALARY RANGES BY RELATEDNESS OF TRAINING OF 1973-74 HEALTH OCCUPATIONS TERMINEES BY SEX

Salary Ranges	Sex of Terminees Responding		Relatedness of Training to Present Job[B]					
			Directly Related		Somewhat Related		Not Related	
	Male	Female	Male	Female	Male	Female	Male	Female
Under $250	3	11	-	3	-	1	3	7
$250 - $299	-	2	-	-	-	-	-	2

$600 - $699	-	-	-	-	-	-	-	-
$700 or more	-	-	-	-	-	-	-	-
TOTAL[A]	5	20	1	7	1	3	3	10

[A]Totals do not match those of Table 24 because some terminees did not respond to all questions.

[B]The terminees made the judgment as to how their present job was related to the training received in their high school vocational program.

Fourteen (56.0%) of the 25 responding terminees were employed at less than $250 per month. Of these 14 terminees, three (21.4%) females were employed in a job directly related to their training, one (7.2%) female was employed in jobs somewhat related to their training, while three (21.4%) males and seven (50.0%) females were employed in jobs not related to their training.

Of the 25 responding terminees, five (20.0%) were males and 20 (80.0%) were females. One (4.0%) male and seven (28.0%) females were employed in jobs directly related to their vocational training, one (4.0%) male and three (12.0%) females were employed in jobs somewhat related to their training, while three (12.0%) males and ten (40.0%) females were employed in jobs not related to their training.

Continuing Education Information

The following section of this report presents information relative to the continuing education of the 1973-74 secondary Health Occupations terminees.

Table 25 shows the vocational educational training opportunities terminees have participated in since leaving their high school vocational program.

TABLE 25

ADDITIONAL VOCATIONAL EDUCATIONAL TRAINING 1973-74
SECONDARY HEALTH OCCUPATIONS TERMINEES
PARTICIPATED IN SINCE LEAVING THEIR
HIGH SCHOOL VOCATIONAL PROGRAM[A]

Type Training	Number	Percent[B]
On-the-job training (employer-sponsored program)	14	12.6
Public school adult vocational program	1	0.9
Private vocational school program	1	0.9
University or four year college	16	14.4
Junior college	17	15.3
Post-secondary vocational-technical institute (trade school)	6	5.4
Apprenticeship training program	1	0.9
Specialized occupational military training	1	0.9
Other[C]	7	6.3
TOTAL[D]	64	57.6

[A] Fifty (45.0%) of the 111 terminees gave no indication of being involved in additional vocational training. Of the 111 terminees, 57 (51.4%) took part in one additional vocational training opportunity since leaving their high school program. Seven (6.3%) took part in two and no terminees took part in the three additional training opportunities.

[B] Percentages are based on the 111 (41.3%) respondents of the total 269 terminees who returned questionnaires.

[C] See page 41 for the "Other" listing as specified by the terminees.

[D] The total indicated the number of different training programs in which terminees enrolled. As footnoted above, several terminees had enrolled in more than one training program.

Of the total termineee, the 17 (15.3%) who were enrolled in Junior Colleges represented the largest area where termineee had taken additional vocational training.

Of the 111 responding termineee, 57 (51.4%) had taken part in one additional vocational training program since leaving their high school program. Seven (6.3%) enrolled in two training programs, and no termineee had enrolled in three vocational training programs. Fifty (45.0%) indicated they had not enrolled in any additional vocational training.

The following is a listing of the "Other" (Table 25) vocational education training termineee indicated they had participated in:

"Other" Vocational Training	Number
Nursing Home Aid	1
Nursing Assistant	1
Work Clerk	1
College	1
Nursing (Practical)	1
Nursing School (3 yr. diploma)	1
Secretarial work	1
Cosmetology	1

Table 26 points out the additional programs the 1973-74 secondary Health Occupations termineee were presently attending beyond their high school training by whether these programs were related to their high school vocational program.

Of the 111 1973-74 secondary Health Occupations termineee who responded to the survey, two (1.8%) were attending an on-the-job training program (employer-sponsored), 13 (11.7%) were attending a vocational-technical institute, 20 (18.0%) were attending a junior college, 16 (14.4%) were attending a four year college or university, none were attending a public adult vocational program, one (0.9%) was attending private business

or trade school, one (0.9%) was attending an apprenticeship program, and five (4.5%) were attending some other type of school or educational program. (See page 43 for the listing of the other types of schools or educational programs students were attending.)

TABLE 26

PROGRAMS PRESENTLY ATTENDED BY THE 1973-74 SECONDARY HEALTH OCCUPATIONS TERMINEES BY WHETHER THESE PROGRAMS WERE RELATED TO THEIR HIGH SCHOOL VOCATIONAL EDUCATION PROGRAM[A]

Programs Attended	Terminees		Program Related to High School VED Program					
			Yes		No		No Response	
	No.	%	No.	%	No.	%	No.	%
On-the-job training (employer-sponsored)	2	1.8	0	0.0	0	0.0	2	1.8
Vocational-technical institute (Trade School)	13	11.7	5	4.5	4	3.6	4	3.6
Junior college	20	18.0	6	5.4	13	11.7	1	0.9
Four year college or university	16	14.4	11	9.9	4	3.6	1	0.9
Public school adult vocational program	0	0.0	0	0.0	0	0.0	0	0.0
Private business or trade school	1	0.9	0	0.0	1	0.9	0	0.0
Apprenticeship program	1	0.9	1	0.9	0	0.0	0	0.0
Other[B]	5	4.5	2	1.8	1	0.9	2	1.8
TOTAL	58	52.3	25	22.5	23	20.7	10	9.0

[A]All percentages were based on the 111 responding terminees.

[B]See page 43 for listing of "Other" schools or educational institutions terminees were attending.

Fifty-eight (52.3%) of the 111 Health Occupations terminees were presently continuing their education. Twenty-five (22.5%) of the terminees were continuing their education in a program related to their high school vocational program. Twenty-three (20.7%) were attending a program in an area not related to their high school vocational program.

The following is a listing of the "Other" category (Table 26) of additional programs the 1973-74 Health Occupations terminees were attending:

"Other" School or Program	Number
American School (correspondence course)	1
Nursing School	2
Ketona Nursing Home	1
Jefferson State College	1
B.M.E.T. at U.A.B.	1

Of the 111 responding terminees, 56 (50.5%) indicated they were not attending a school or program but would like to do so. The following is a list of the areas in which these terminees desired to study:

Area of Study	Number
Registered Nurse	18
Licensed Practical Nurse	2
Nurse's Aid	5

No Response	6

Thirty-five (31.5%) of the 111 responding terminees indicated they were not attending a school or program and did not desire to do so. Twenty (18.0%) terminees did not respond to the question.

Table 27 illustrates the programs presently attended by the terminees by OE Code area studied by whether it related to their high school vocational program. No attempt was made to show the no responses to the data items; therefore, many of the totals do not correspond.

TABLE 27

PROGRAMS PRESENTLY ATTENDED BY THE 1973-74 SECONDARY HEALTH OCCUPATIONS TERMINEES BY OE CODE AREA STUDIED BY WHETHER IT RELATED TO THEIR HIGH SCHOOL VOCATIONAL PROGRAMS[A]

OE Code	Occupational Title	TOTAL Presently Continuing Education	Type School or Educational Program Presently Attending

[A]Since some terminees did not respond to parts of the questions, totals will not correspond.

Job Placement Information

The following section of this report presents information concerning job placement of the 1973-74 secondary Health Occupations terminees.

Table 28 points out whether the 1973-74 Health Occupations terminees were seeking full-time employment when they left their high school vocational program and if their vocational teacher attempted to help them get a job.

TABLE 28

WHETHER VOCATIONAL TEACHER ATTEMPTED TO HELP 1973-74 HEALTH OCCUPATIONS TERMINEES GET A JOB IF SEEKING FULL-TIME EMPLOYMENT UPON LEAVING THE HIGH SCHOOL VOCATIONAL PROGRAM[A]

Vocational Teacher Attempted To Get Terminee A Job	Number	Percent
Yes	26	61.9
No	16	38.1
TOTAL	42	100.0

[A]Sixty-four (57.7%) of the responding terminees indicated they were not seeking full-time employment when they left their high school vocational program. Five (4.5%) of the terminees did not respond to the question.

Of the 42 responding 1973-74 Health Occupations terminees indicating they were seeking full-time employment when they left their high school vocational program, 26 (61.9%) indicated that their

vocational teacher attempted to help them get a job. However, 16 (38.1%) of the terminees seeking full-time employment indicated that their vocational teacher did not attempt to help them secure employment. It was interesting to note that 64 (57.7%) of the reporting 1973-74 Health Occupations terminees indicated that they were not seeking full-time employment when they left their high school vocational program.

Table 29 illustrates how long it took the 1973-74 Health Occupations terminees to get their first full-time job after they left their high school vocational program and began actively seeking full-time employment.

TABLE 29

LENGTH OF TIME IT TOOK THE 1973-74 HEALTH OCCUPATIONS TERMINEES TO SECURE FIRST FULL-TIME JOB AFTER LEAVING HIGH SCHOOL VOCATIONAL PROGRAM AND BEGINNING ACTIVELY SEEKING FULL-TIME EMPLOYMENT[A]

Time to Secure First Full-Time Job	Number	Percent
0 - 2 weeks	10	33.3
3 - 4 weeks	7	23.3
5 - 8 weeks	3	10.0
9 - 12 weeks	2	6.7
13 or more weeks	8	26.7
TOTAL	30	100.0

[A]Sixteen terminees indicated they already had a job when they left their high school vocational program.

Ten (33.3%) of the 30 secondary Health Occupations terminees secured their first full-time job within two weeks after they left their high school vocational program and began actively seeking full-time employment. However, eight (26.7%) of the terminees took 13 or more weeks to

secure their first full-time job. There were 16 terminees who indicated they already had a job when they left their high school vocational program.

Table 30 shows how the 1973-74 secondary Health Occupations terminees indicated they got their first full-time job after leaving their high school vocational program.

TABLE 30

HOW THE 1973-74 HEALTH OCCUPATIONS TERMINEES INDICATED THEY GOT THEIR FIRST FULL-TIME JOB AFTER LEAVING THEIR HIGH SCHOOL VOCATIONAL PROGRAM

How Terminees Secured First Full-Time Job	Number	Percent
Through your vocational teacher	4	13.3
Through your counselor	0	0.0
Through other school teachers or administrators	2	6.7
Through a friend or relative	10	33.3
Through applications to business or industry	10	33.3
Through state (local) employment office	1	3.4
Through a private employment agency	0	0.0
Through radio, T.V., newspaper, or other news media	0	0.0
Other[A]	3	10.0
TOTAL	30	100.0

[A]See listing on page 49 for the "Other" ways terminees indicated they secured their first full-time job after leaving their high school vocational program.

Of the 30 1973-74 Health Occupations terminees who responded to the survey item, 10 (33.3%) indicated they got their first full-time job after leaving their high school vocational program through applications to business and industry. Ten (33.3%) of the terminees also indicated they got their first full-time job through a friend or

relative. These represented the two methods that the largest number of Health Occupations terminees utilized to secure their first full-time job. Only four (13.3%) of the terminees indicated they secured their first job through their vocational teacher. No student indicated that a counselor got them their first full-time job after leaving their vocational program. Those students who already had a job before leaving their high school vocational program were not shown in Table 30. (See Table 31, page 50)

Only one of the three terminees who checked the "Other" category specified the means by how he secured his first full-time job after leaving his high school vocational program. The following list indicates the "Other" means the terminee indicated.

"Other" Means for Securing First Full-Time Job	Number
V.I.E. Class	1

Table 31 shows how the 1973-74 Health Occupations terminees who were working while in high school taking their vocational program indicated they got that job.

Twenty-three (20.7%) of the 111 reporting 1973-74 Health Occupations terminees indicated they were working during the time they were in high school taking their vocational program. Of those terminees working while in high school, ten (43.5%) got their job through their vocational instructor, eight (34.9%) through a friend or relative, and three (13.0%) got jobs through applications to business or industry. These three means were the ways most of the terminees secured a job while they were still in high school taking their vocational program.

TABLE 31

HOW THE 1973-74 HEALTH OCCUPATIONS TERMINEES WHO WERE WORKING WHILE IN HIGH SCHOOL TAKING THEIR VOCATIONAL PROGRAM INDICATED THEY GOT THAT JOB[A]

Who or What Helped Terminee Get Job	Number	Percent
Your vocational teacher	10	43.5
Your counselor	1	4.3
Other school teachers or administrators	-	-
Friend or relative	8	34.9
Applications to business or industry	3	13.0
State (local) employment office	-	-
Private employment agency	-	-
Radio, T.V., newspaper, or other news media	1	4.3
Other	-	-
TOTAL	23	100.0

[A]Eighty-eight (79.3%) terminees indicated they had no job during the time they were in high school taking their vocational course.

Table 32 reveals the indications of the 1973-74 Health Occupations terminees as whether, before taking their first job, they looked for employment within daily walking or driving distance of home by how their first job related to their vocational training.

Twenty-six (89.7%) of the 1973-74 Health Occupations terminees who were employed in their first job indicated they sought employment within daily walking or driving distance of home. Three (10.3%) terminees indicated before taking their first job, they looked for a job beyond daily walking or driving distance of home.

Of the nine terminees who were working in a directly related area, only one (11.2%) sought employment beyond daily walking or driving distance of home.

TABLE 32

INDICATIONS OF 1973-74 HEALTH OCCUPATIONS TERMINEES AS TO WHERE THEY LOOKED FOR THEIR FIRST JOB BEFORE TRAINING ONE BY HOW THEIR FIRST JOB RELATED TO THEIR TRAINING[A]

Before Taking First Job, Where Terminees Looked for Job	Total Reporting		Total Reporting by Relatedness of First Job to Vocational Training					
			Directly Related		Somewhat Related		Not Related	
	No.	%	No.	%	No.	%	No.	%
Within daily walking or driving distance of home	26	89.7	8	88.9	12	85.7	6	100.0
Beyond daily walking or driving distance of home[B]	3	10.3	1	11.1	2	14.3	0	0.0
TOTAL	29	100.0	9	100.0	14	100.0	6	100.0

[A]Eleven terminees indicated they already had their first job while in high school. Of those 11 terminees, 6 (54.5%) were working in a directly related area, 3 (27.3%) in a somewhat related area, while 2 (18.2%) were working in a non-related area.

[B]See listing, page 52, for reasons terminees gave for seeking their first job away from home.

It is interesting to note that of the six terminees whose first jobs did not relate to their training, none of those terminees sought employment beyond daily walking or driving distance of home.

Eleven terminees indicated they had their first job while in high school. Of those 11 terminees, six (54.5%) were working in a directly related area, three (27.3%) in a somewhat related area, and two (18.2%) were working in a non-related area.

The following is a listing of reasons terminees gave for seeking a job beyond daily walking or driving distance of their home before

accepting their first job. Of the three terminees who indicated they sought a job beyond daily walking or driving distance of home before accepting their first job, two gave reasons why they sought that job.

Reasons for Seeking Job Beyond Daily Walking or Driving Distance Before Accepting First Job	Number
Was going to move	1
Because company was hiring	1

Table 33 reveals the indications of the 1973-74 Health Occupations terminees who were working in their first job not related to their training by whether or not they tried to get a job related to their training by where they looked for employment before accepting that first job.

TABLE 33

INDICATIONS OF THE 1973-74 HEALTH OCCUPATIONS TERMINEES WORKING IN FIRST JOB NOT RELATED TO THEIR TRAINING BY WHETHER OR NOT THEY TRIED TO GET A JOB RELATED TO THEIR TRAINING BY WHERE THEY LOOKED FOR EMPLOYMENT BEFORE ACCEPTING FIRST JOB[A]

Where Terminees Working in Non-Related Areas Looked for Employment Before Accepting First Job	Total Reporting		Before Accepting This First Job Unrelated to Training Whether Terminees Sought Job in Related Area			
			Yes		No[B]	
	No.	%	No.	%	No.	%
Sought employment within daily walking or driving distance of their home	12	85.7	4	80.0	8	88.9
Sought employment beyond daily walking or driving distance of their home	2	14.3	1	20.0	1	11.1
TOTAL	14	100.0	5	100.0	9	100.0

[A]Totals in this table may not correspond with totals of terminees for non-related categories in other tables for the following reasons: (1) some terminees had jobs when leaving program and did not have to seek employment and (2) some terminees failed to respond to one or more of the related questions from which data was drawn.

[B]See page 24 for the listing of reasons terminees who were working in non-related jobs gave for not trying to secure a job that was related to their training.

It is important to note that of the 14 terminees who were working in a non-related first job, only one (7.1%) sought related employment beyond daily walking or driving distance of home before accepting his first job.

Table 34 illustrates the indications of the 1973-74 Health Occupations terminees as to where they looked for a job before taking their present job by how their present job is related to their vocational training.

TABLE 34

INDICATIONS OF 1973-74 HEALTH OCCUPATIONS TERMINEES AS TO WHERE THEY LOOKED FOR A JOB BEFORE TAKING THEIR PRESENT JOB BY HOW THEIR PRESENT JOB RELATED TO THEIR TRAINING[A]

Where Terminees Looked for Job Before Taking Present Job	Total Reporting		Total Reporting by Relatedness of Present Job to Vocational Training					
			Directly Related		Somewhat Related		Not Related	
	No.	%	No.	%	No.	%	No.	%
Within daily walking or driving distance of home	21	87.5	4	80.0	3	75.0	14	93.3
Beyond daily walking or driving distance of home[B]	3	12.5	1	20.0	1	25.0	1	6.7
TOTAL	24	100.0	5	100.0	4	100.0	15	100.0

[A]Ten terminees reported they already had their present job while in high school. Of those ten terminees, four (40.0%) were in a directly related area, three (30.0%) in a somewhat related area, while three (30.0%) were working in a non-related area.

[B]See listing, page 54 for reasons terminees gave for seeking their present job away from home.

Twenty-one (87.5%) of the presently employed 1973-74 Health Occupations terminees indicated they sought employment within daily walking

or driving distance of home. Three (12.5%) terminees indicated they sought employment beyond daily walking or driving distance of home.

Of the five terminees who were working in a directly related area, only one (20.0%) sought employment beyond daily walking or driving distance of home.

Of the 15 terminees who were presently working in a non-related area, only one (6.7%) sought employment beyond daily walking or driving distance of his home.

Ten terminees reported they already had their present job while in high school. Of those ten terminees, four (40.0%) were in directly related areas, three (30.0%) in somewhat related areas, and three (30.0%) were in non-related areas.

The following is a list of reasons terminees gave for seeking a job beyond daily walking or driving distance of their home before accepting their present job. Of the three terminees who indicated they sought a job beyond daily walking or driving distance of home before accepting their present job, two gave reasons why they sought that job.

Reasons for Seeking Job Beyond Daily Walking or Driving Distance Before Accepting Present Job	Number
Was going to move	1
Was not many choices around	1

Table 35 reveals the indications of the 1973-74 Health Occupations terminees who were working in their present job not related to their training by whether or not they tried to get a job related to their training by where they looked for employment before accepting that present job.

TABLE 35

INDICATIONS OF THE 1973-74 HEALTH OCCUPATIONS TERMINEES WORKING IN PRESENT JOB NOT RELATED TO THEIR TRAINING BY WHETHER OR NOT THEY TRIED TO GET A JOB RELATED TO THEIR TRAINING BY WHERE THEY LOOKED FOR EMPLOYMENT BEFORE ACCEPTING PRESENT JOB[A]

Before Accepting Present Job Where Terminees Working in Non-Related Areas Looked for Employment	Total Reporting		Before Accepting This Present Job Unrelated to Training Whether or Not Terminees Sought Job in Related Area			
			Yes		No[B]	
	No.	%	No.	%	No.	%
Sought employment within daily walking or driving distance of their home	15	93.8	9	90.0	6	100.0
Sought employment beyond daily walking or driving distance of their home	1	6.2	1	10.0	0	0.0
TOTAL	16	100.0	10	100.0	6	100.0

[A]Totals in this table may not correspond with totals of terminees for non-related categories in other tables for the following reasons: (1) some terminees had jobs when leaving programs and did not have to seek employment and (2) some terminees failed to respond to one or more of the related questions from which data was drawn.

[B]See page 32 for the listing of reasons terminees who were working in non-related jobs gave for not trying to secure a job that was related to their training.

Only one (6.3%) of the 16 terminees who were working in a non-related area sought related employment beyond daily walking or driving distance of home before accepting his present job.

APPENDIX

PRESENT JOB AND FIRST JOB TITLES OF THE 1973-74 HEALTH OCCUPATIONS TERMINEES

PRESENT JOB AND FIRST JOB TITLES OF THE 1973-74 HEALTH OCCUPATIONS TERMINEES

For those terminees who indicated present or first job occupations, this appendix lists the present job title and first job title by their high school vocational training area (OE Codes). The job titles are listed as the terminees reported them. The number of full-time jobs held by these terminees since completing their high school vocational course is listed, current employment status is listed, and whether the student intended to get a job in the area while in the program.

The following code is used to identify the employment status of the terminees:

0. Unemployed, but seeking employment
1. Employed full time
2. Employed part time, seeking full-time job
3. Employed part time, not seeking full-time job
4. Employed full time and attending school
5. Employed part time and attending school
6. Unavailable for employment

The following code is used to identify whether the student intended to get a job in the area while in the program:

1. No
2. Was not sure
3. Yes

The number in parenthesis behind the job titles indicates the relatedness of the high school vocational training to these jobs. The terminees

made the judgment as to the relatedness of their training to these jobs. The following code is used to identify this relatedness:

1. Directly related
2. Somewhat related
3. Not related

The total in each occupational title area may not correspond to the total in each OE Code as listed in Table 23. Some of the terminees failed to indicate the title of their present position. If the first job title was the same as the present job title, the first job title is included under the present job title.

OE Code 07.0103 - Dental Lab Technician

No.	Employment Status	Full-Time Jobs Held Since High School Voc. Course	Intent of Employment in Area	Present Job	First Job
1	1	1	3	Dental Technician (2)

TITLE: BUSINESS AND OFFICE EDUCATION FOLLOW-UP. FOLLOW-UP OF 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES FROM THE SECONDARY SCHOOL VOCATIONAL PROGRAMS OF ALABAMA. RESEARCH AND DEVELOPMENT REPORT NO. 28.

PERSONAL AUTHOR: MORGAN, ALICE S.; DRAKE, JAMES BOB

DESCRIPTOR: *BUSINESS EDUCATION; *OFFICE OCCUPATIONS; *VOCATIONAL FOLLOWUP; *STATE SURVEYS; *SECONDARY EDUCATION; OCCUPATIONAL SURVEYS; VOCATIONAL EDUCATION

IDENTIFIER: ALABAMA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 2.

DESCRIPTIVE NOTE: 123P.; RELATED DOCUMENTS VT 103 321 THROUGH VT 103 335 IN THIS ISSUE.

ABSTRACT: THIS REPORT RELATES THE FINDINGS OF A STATEWIDE FOLLOWUP SURVEY OF 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES FROM THE SECONDARY SCHOOL VOCATIONAL PROGRAMS OF ALABAMA. QUESTIONNAIRES WERE MAILED TO 5,209 STUDENT TERMINEES APPROXIMATELY SEVEN TO EIGHT MONTHS AFTER LEAVING SCHOOL. RETURNS WERE RECEIVED FROM 1,981 (38 PERCENT) OF THE BUSINESS AND OFFICE EDUCATION TERMINEES FROM THE INITIAL MAILING AND ONE FOLLOWUP. DATA ARE PRESENTED IN TABLES WITH ACCOMPANYING NARRATIVE SUMMARIES ORGANIZED ACCORDING TO THESE MAJOR SECTIONS: GENERAL INFORMATION ON THE TERMINEES; BASIC INFORMATION RELATED TO THE VOCATIONAL PROGRAMS; BASIC EMPLOYMENT INFORMATION; CONTINUING EDUCATION INFORMATION; AND JOB PLACEMENT INFORMATION. PRESENT AND FIRST JOB TITLES OF THE 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES ARE APPENDED. (NJ)

For their help in refining the survey instrument, special thanks are due the following state supervisors:

Mrs. Divine Bauer, Health Occupations Education
Miss Evelyn Cotney, Home Economics Education
Mr. H. W. Green, Agribusiness Education
Mr. J. C. Lindley, Trade & Industrial Education
Miss Anacile Riggs, Distributive Education
Mrs. Sandra Yelverton, Business and Office Education

Appreciation is also extended to the following members of the Occupational Research and Development Unit for their contribution to the study:

Mrs. Bonnie J. Burks, Research Associate
Mr. Paul Davis, Research Associate
Mr. Gary Greenshields, Graduate Research Assistant
Mr. John Gross, Research Associate
Mr. James McMath, Graduate Research Assistant
Miss Flossi Sergen, Secretary
Mr. Ed Williams, Duplicating Operator

FOLLOW-UP OF 1973-74 BUSINESS AND OFFICE EDUCATION
TERMINEES FROM THE SECONDARY SCHOOL
VOCATIONAL PROGRAMS OF ALABAMA

Alabama continues to support one of the most progressive and comprehensive vocational education programs in the nation. In addition to serving youth and adults by training them for gainful and useful employment, the diversification of vocational courses meets a serious job need and contributes to the industrial development in the state.

With the millions of tax dollars being spent on vocational education, is necessary to attempt to account to the taxpayer and decision-makers on the results of those expenditures. Terminee student follow-up studies constitute one of the most valuable techniques for assessing vocational education system outcomes.

The Alabama State Department of Education, Division of Vocational Education and Community Colleges, recognizing this important phase of accountability and evaluation, initiated the development of a statewide follow-up system for its vocational education program terminees at the secondary school level. The Division, under the direction of Dr. T. L. Faulkner, State Director, contracted with the Occupational Research and Development Unit at Auburn University to develop and implement the statewide follow-up system for all its secondary vocational terminees in all service areas.

This report relates the findings of the survey instrument mailed to the 1973-74 Business and Office Education terminees from the secondary

school vocational programs of Alabama. When the terminees received the questionnaire, most had been out of school seven to eight months.

General Information

Student rosters with names and addresses of 1973-74 Business and Office Education terminees were received from 268 secondary school vocational teachers in Alabama. Of the 268 teachers from which student rosters were received, 57 were in Secondary Area Vocational Centers (AVC) and 191 were in programs in schools of other settings. The total of 5,209 student terminees reported to the ORDU were mailed the follow-up forms. Returns were received from 1,981 (38.0%) of the Business and Office Education terminees from the initial mailing and one follow-up. At least one student questionnaire was received from 228 of the 268 teachers.

All terminees reported in this study were in programs administered only by the Business and Office Education Section of the Division of Vocational Education and Community Colleges, State Department of Education.

Table 1 presents data relative to the total population of the Business and Office Education terminees and the number of returns categorized by OE codes as reported by teachers.

TABLE 1

DESCRIPTION OF TOTAL POPULATION AND RETURNS BY OE CODE OF 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES[A]

OE Code[B]	Occupational Title	Total Number of Students	Percent of BOE Students by OE Code	Number of Returns	Percent of Returns for OE Code Area
14.0000	Office Occupations	74	1.4	24	32.4
14.0100	Accounting & Computing	447	8.6	184	41.2
14.0101	Accountants	33	0.6	13	39.4

14.0900	Typing & Related	219	4.2	85	38.8
14.0901	Clerk-Typists	126	2.4	49	38.9
14.0902	Typists	1	0.0	0	0.0
99.0105	Career Guidance	1	0.0	0	0.0
	TOTAL ALL AREAS	5209	100.0	1981	38.0

[A]These terminees were in programs administered only under the Business and Office Education Section of the Division of Vocational Education and Community Colleges, State Department of Education.

[B]OE Codes as reported by teachers.

Of the 1973-74 Business and Office Education terminees reported by the teachers, the largest number in any OE code was in the occupational title area of Filing, Office Machines, and General Office Clerical. This 2,375 represented 45.6 percent of the reported Business and Office Education terminees. There were 1,275 (24.5%) terminees listed as studying Stenographic, Secretarial and Related. The combined enrollment of these two was 3,650, and this represented 70.0 percent of the total enrollment in the Business and Office Education area.

Table 1A is a description of the total population and returns by OE Code area, type school, and termination status of the 1973-74 Business and Office Education terminees.

TOTAL	1981	100.0

Table 7 indicates, according to the 1973-74 Business and Office Education terminees, the primary source of influence in selecting their vocational course.

TABLE 7

PRIMARY INFLUENCES ON THE 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES IN SELECTING THEIR VOCATIONAL COURSE

Group or Individual Terminees Felt Influenced Them Most in Selecting Vocational Course	Number	Percent
Parent(s) or Guardian(s)	182	9.2
Guidance Counselor	80	4.0
Your Vocational Teacher	150	7.6
Another Teacher or Principal	29	1.5
Student in VED Program	124	6.3
A Friend or Relative	123	6.2
A Businessman	11	0.5
Made Choice Yourself	1256	63.4
Other[A]	20	1.0
No Response	6	0.3
TOTAL	1981	100.0

[A]See page 14 for listing of "Others" who influenced Business and Office Education terminees in selecting their VED course.

Parents or Guardians appeared to be the greatest outside influence on those terminees enrolling in the Business and Office Education program. One hundred eighty-two (9.2%) of the terminees reponding indicated that their Parent(s) or Guardian(s) influenced them most in selecting their Business and Office Education course. However, 1,256 (63.4%) indicated that they selected their course of study on their own. Eighty terminees (4.0%) indicated that a guidance counselor influenced them most in selecting their program. One hundred fifty (7.6%) of the terminees indicated that their vocational teacher influenced them most in selecting their course in Business and Office Education.

Below are the responses given to the "Others" category indicated in Table 7 as to the primary source of influence in selecting their vocational course.

"Other" Persons or Groups Who Most Influenced Terminees in Selecting Their VED Course	Number
Sister	6
Mother	2
Myself	2
Brother	1
My little girl	1
Vocational principal	1
Miss _____	1
Relatives who were teachers	1
A teacher	1
Great vocational teacher	1
Junior Achievement	1
Within my major	1
Thought I would need it in college	1
Undecided about college	1
Thought it would help get a job	1
Decided that was what I wanted	1
Was mislead in council meeting	1

Table 8 indicates terminees' opinions as to whether they had adequate job or occupational information and school experiences to make a realistic career choice.

TABLE 8

OPINIONS OF 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES AS TO WHETHER THEY HAD ADEQUATE JOB OR OCCUPATIONAL INFORMATION AND SCHOOL EXPERIENCES TO MAKE A REALISTIC CAREER CHOICE

	Number	Percent
Yes	1561	78.8
No	383	19.3
No Response	37	1.9
TOTAL	1981	100.0

Table 9 indicates whether, during the time they were taking their high school vocational program, the reporting 1973-74 terminees intended to get a job in Business and Office Occupations.

TABLE 9

INDICATIONS OF 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES AS TO WHETHER, DURING THE TIME THEY WERE TAKING THEIR HIGH SCHOOL VED PROGRAM, THEY PLANNED TO GET A JOB IN THEIR AREA OF STUDY

Intended To Get Job In Area of Study	Number	Percent
Yes	1170	59.1
No	191	9.6
Was Not Sure	610	30.8
No Response	10	0.5
TOTAL	1981	100.0

It is interesting to note that only 1,170 (59.1%) of the 1973-74 reporting Business and Office Education terminees indicated that during the time they were taking their Business and Office Education program, they intended to get a job in the area they were studying.

Table 10 indicates terminees' opinions on choosing the Business and Office Education terminees, 1,588 (80.2%) indicated that they would select the same vocational program if they had the choice to make again. Only 126 (6.4%) of the responding terminees indicated that they would not take a vocational program.

TABLE 10

OPINIONS OF 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES REGARDING THEIR VOCATIONAL PROGRAM

Question: If You Had It To Do Over Again, Would You...?	Number	Percent
Take the same vocational program	1588	80.2
Not take a vocational program	126	6.4
Choose another vocational program offered in your school, such as _____ [A]	141	7.1
Choose another vocational program if it had been offered in your school, such as _____ [B]	95	4.8
No Response	31	1.6
TOTAL	1981	100.0

[A] See listing I-A below for those other vocational programs offered in terminees' school that they would have taken instead of their Business and Office Education programs.

[B] See listing I-B below for the vocational programs the terminee would have taken instead of their Business and Office Education program if it had been offered in their school.

Table 11 indicates the extend to which the reporting 1973-74 Business and Office Education terminees felt their high school vocational programs prepared them for their first job. This data was also broken down by how that first job related to their vocational program.

Terminees who were in full-time active military service or who had never been employed were not asked to respond to the questions from which this data was reported. Also, the terminees who failed to respond to the question items were not indicated in the table.

In noting the extent to which the 1973-74 Business and Office Education terminees felt their high school vocational course prepared them for their first full-time job by how their first full-time job related to the training they received in their high school Business and Office Education program, some interesting points were revealed. Four hundred forty-one

(53.2%) of the 1973-74 Business and Office Education terminees responding to this item indicated "Excellent" or "Well Prepared" for their first full-time job as a result of the training received in their high school vocational education program. Two hundred seventeen (89.0%) of the 244 terminees employed in their first full-time job related directly to their training felt they were excellent or well prepared for this first job. Only one terminee who was working in an area directly related to his vocational training felt that he was poorly prepared for his first job. There was an additional terminee who indicated that he was working in an area directly related to his vocational course and felt that his preparation did not relate to his job. Of all the responding terminees, only 18 (2.2%) felt that they were poorly prepared for their first full-time job. Of these, only one was working in an area directly related to his vocational course.

TABLE 11

PERCEPTIONS OF 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES AS TO THE EXTENT THEIR HIGH SCHOOL VOCATIONAL PROGRAM PREPARED THEM FOR THEIR FIRST FULL-TIME JOB BY HOW FIRST FULL-TIME JOB RELATED TO TRAINING

Extent Vocational Course Prepared for First Full-Time Job	Total Reporting		Number Reporting by Relatedness of First Full-Time Job to Training Received					
			Directly Related		Somewhat Related		Not Related

Table 12 indicates the extent to which the reporting 1973-74 Business and Office Education terminees felt their high school vocational course prepared them for their present job. Also shown in the table is a breakdown of the data by how their present job was related to their vocational program.

Terminees in active full-time military service, and students who were attending school full time and had not had a job, were not asked to respond to the questions from which Table 12 was prepared. Also, those other students who failed to respond to the items were not shown on the table.

TABLE 12

PERCEPTIONS OF 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES AS TO THE EXTENT THEIR HIGH SCHOOL VOCATIONAL COURSE PREPARED THEM FOR THEIR PRESENT JOB BY HOW THEIR PRESENT JOB RELATED TO TRAINING

Extent Vocational Course Prepared for Present Job	Total Reporting		Number Reporting by Relatedness of Present Job to Training Received					
			Directly Related		Somewhat Related		Not Related	
	No.	%	No.	%	No.	%	No.	%
Excellent	108	10.4	69	21.4	32	7.7	7	2.3
Well Prepared	466	44.9	218	67.7	221	53.3	27	8.9

TOTAL	1039	100.0	322	100.0	415	100.0	302	100.0

[A]See listing on page 21 for reasons terminees specified for only being trained "Fair" by their vocational course for their present job.

[B]See listing on page 22 for reasons terminees specified for being "Poorly Prepared" by their vocational course for their present job.

Of the 1,039 terminees responding to these items, 574 (55.3%) indicated "Excellent" or "Well Prepared" for their present job as a result of their high school vocational program. Nineteen (1.8%) terminees reported feeling poorly prepared for their present job as a result of their training.

Two hundred eighty-seven (89.1%) of the 322 responding terminees working in an area directly related to their high school vocational program indicated that they felt excellent or well prepared by their training.

Some of the terminees who indicated "Fair" as the extent their vocational program prepared them for this present job indicated reasons for this. The following lists the reasons the 1973-74 Business and Office Education terminees indicated for being trained only "Fair" by their vocational course for their present job.

Reasons	Number
Not Related	37
Just not enough covered	15
Teacher	12
Not enough material or equipment	11
No banking	10
Not enough typing	8
Not enough bookkeeping	8
Not enough computer	7
Too much typing	6
Public relations	6
I was not interested at the time	6
Some things learned only on the job	5
Not in program long enough	3
Not enough payroll	3
Not enough shorthand	2
Too much paperwork	2
Not enough stress on perfection	2
No keypunch	1
Speed	1
Varitypist	1
Too many in class	1
Already knew my job	1

Several terminees who indicated they were "Poorly Prepared" for their present job by their vocational program gave reasons why they felt that way. The following lists the reasons given.

Reasons

No computer training
Not related
Not interested at the time
Insurance not covered
Poor teacher
Not enough time
Wasn't enough
No bookkeeping
Unequal
No computer
Not enough subjects
I have learned more on the job
Wanted to be legal secretary
Skimpy information
Not the same
I didn't take this in school

Table 13 focuses on the Business and Office Education student club. The researchers sought to determine the extent to which the 1973-74 Business and Office Education terminees felt that their high school student club aided in preparing them for their present job. Data are also broken down by the relationship of the present job to the vocational training received.

Only respondents who had had a job since terminating their high school vocational Business and Office Education program were asked to respond to the questions reported in Table 13. Students in active full-time military service were excluded. Eighty-four (7.7%) of the 1,098 terminees reported no related student club was available, while 318 (29.0%) were not members of a related student club.

Only 271 (39.0%) of the 696 terminees who participated in student club activities indicated they were "Excellent" or "Well Prepared" by

their related student club for their present job. One hundred fifty-eight (22.7%) indicated they were "Poorly Prepared" by their related student club for their present job. Of those 158, 111 (70.3%) were in a related or somewhat related job, while 47 (29.7%) were in a non-related job.

TABLE 13

PERCEPTIONS OF 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES AS TO THE EXTENT THEIR HIGH SCHOOL VOCATIONAL STUDENT CLUB PREPARED THEM FOR THEIR PRESENT JOB BY HOW THEIR PRESENT JOB RELATED TO TRAINING[A]

Extent High School Vocational Student Club Helped Prepare for Present Job	Total Reporting		Total Reporting by Relatedness of Present Job to Vocational Training					
			Directly Related		Somewhat Related		Not Related	
	No.	%	No.	%	No.	%	No.	%
Excellent	78	11.2	38	16.1	27	8.6	13	8.8
Well Prepared	193	27.7	74	31.3	85	27.2	34	23.1
Fair	267	38.4	87	36.9	127	40.6	53	36.1
Poorly Prepared	158	22.7	37	15.7	74	23.6	47	32.0
TOTAL	696	100.0	236	100.0	313	100.0	147	100.0

[A]Of the 1,098 who responded, 84 (7.7%) had no related student club available, and 318 (29.0%) were not members of a related student club.

Of those 236 terminees who were working in an area directly related to the training they received in their high school vocational program, 112 (47.5%) revealed that they were "Excellent" or "Well Prepared" for their present job by their related student club. Only 37 (15.7%) of the 236 terminees who were working in a job directly related to the training they received indicated they were "Poorly Prepared" for their present job by their related student club.

Table 14 reports how the 1973-74 Business and Office Education terminees rated the quality of teaching by their high school vocational instructors.

TABLE 14

1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES' RATINGS OF THE QUALITY OF TEACHING BY THEIR HIGH SCHOOL VOCATIONAL INSTRUCTORS

Rating	Number	Percent
Excellent	727	36.7
Good	853	43.0
Fair	301	15.2
Poor	61	3.1
Very Poor	29	1.5
No Response	10	0.5
TOTAL	1981	100.0

One thousand five hundred eighty (79.7%) of the 1,981 reporting 1973-74 Business and Office Education terminees rated the quality of teaching by their vocational instructor either "Good" or "Excellent." Only 90 (4.6%) rated the quality of teaching by their instructors "Poor" or "Very Poor."

Table 15 illustrates how the 1973-74 Business and Office Education terminees rated their high school vocational instructor's interest in their class work.

One thousand five hundred nineteen (76.7%) of the 1,981 reporting 1973-74 Business and Office Education terminees rated the interest exhibited by their high school vocational instructor in their class work as "Good" or "Excellent." Only 131 (6.6%) of the terminees rated the interest their vocational instructors showed in their class work as "Poor" or "Very Poor."

TABLE 15

1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES' RATINGS OF THEIR HIGH SCHOOL VOCATIONAL INSTRUCTOR'S INTEREST IN THE STUDENT'S CLASS WORK

Rating	Number	Percent
Excellent	777	39.2
Good	742	37.5
Fair	323	16.3
Poor	88	4.4
Very Poor	43	2.2
No Response	8	0.4
TOTAL	1981	100.0

Table 16 points out how the 1973-74 Business and Office Education terminees subjectively rated the knowledge their vocational teachers possessed about their field of study. This rating is also shown in the table by a breakdown of how the terminees' present job related to the training they received in their high school vocational program. Terminees were asked to base their judgments on their current knowledge of their job and responsibilities.

Total responses to this item indicates that 822 (79.2%) of the 1,038 responding 1973-74 Business and Office Education terminees rated the knowledge their vocational teachers possessed about their field of study either "Good" or "Excellent." For those 323 terminees working in an area directly related to the training they received, 283 (87.6%) rated the knowledge their teachers possessed about their field of study as "Good" or "Excellent." A favorable point was revealed in that none of those terminees working in a directly related area rated the knowledge

their vocational teachers possessed about their field of study as "Very Poor," and only seven rated "Poor."

TABLE 16

1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES' RATINGS OF THE KNOWLEDGE THEIR HIGH SCHOOL VOCATIONAL TEACHER POSSESSED ABOUT THEIR FIELD OF STUDY BY HOW THE TERMINEES' PRESENT JOB RELATED TO THE TRAINING THEY RECEIVED

Ratings[A]	Total Reporting		Number Reporting by Relatedness of Present Job to Training Received					
			Directly Related		Somewhat Related		Not Related	
	No.	%	No.	%	No.	%	No.	%
Excellent	349	33.6	139	43.0	125	29.9	85	28.6
Good	473	45.6	144	44.6	194	46.4	135	45.5
Fair	172	16.6	33	10.2	79	18.9	60	20.2
Poor	35	3.4	7	2.2	16	3.8	12	4.0
Very Poor	9	0.8	0	0.0	4	1.0	5	1.7
TOTAL	1038	100.0	323	100.0	418	100.0	297	100.0

[A]Ratings were to be based on terminee's judgment of their current knowledge of their job and responsibilities.

If the respondent was working in an area related to his trianing, he was asked to compare the facilities and equipment in his high school vocational program with those on his present job. Table 17 illustrates how the 1973-74 Business and Office Education terminees responded.

Only 106 (15.6%) of the 680 responding 1973-74 Business and Office Education terminees working in an area related to their training rated the facilities and equipment in their high school vocational program as

similar to those on their present job; however, 168 (24.7%) rated the facilities and equipment not as good as those on their present job.

TABLE 17

HOW 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES WORKING IN A RELATED AREA RATED THE FACILITIES AND EQUIPMENT IN THEIR HIGH SCHOOL VOCATIONAL PROGRAM[A]

Rating[B]	Number	Percent
Better than those on present job	106	15.6
Similar to those on present job	406	59.7
Not as good as those on present job	168	24.7
TOTAL	680	100.0

[A]Four hundred seventy (40.9%) of the responding 1,150 terminees indicated that their present job was not related to their vocational training enough to compare facilities and equipment.

[B]Persons who had not had a job since leaving their vocational program, including those in military service and those who attended school, were asked not to respond to questions from which data was drawn. Returns were received from 1,981 terminees.

Table 18 shows how 1973-74 Business and Office Education terminees, who were in a cooperative work program in school and were not working in an area related to their vocational training, rated the facilities and equipment used in their cooperative work station.

Only 44 (9.1%) of the 483 responding 1973-74 Business and Office Education terminees whose vocational programs had included cooperative work and were now working in an area related to their vocational training, rated the facilities and equipment in their cooperative work station as better than those on their present job. Two hundred forty-one (49.9%) rated the facilities and equipment in their cooperative training station as similar to those on their present job. Only 83 (17.2%) rated

the facilities and equipment in their cooperative work stations not as good as those in their present job. It was significant to note that 115 (23.8%) indicated they were working at the same establishment where they did their cooperative training.

TABLE 18

HOW 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES NOW WORKING IN A RELATED AREA, WHOSE VOCATIONAL PROGRAM INCLUDED COOPERATIVE WORK, RATED FACILITIES AND EQUIPMENT USED IN THEIR COOPERATIVE WORK STATION[A]

Rating[B]	Number	Percent
Better than those on present job	44	9.1
Similar to those on present job	241	49.9
Working at same place where cooperative training was done	115	23.8
Not as good as those on present job	83	17.2
TOTAL	483	100.0

[A]One hundred eighty-eight (17.8%) of the responding 1,054 Business and Office Education terminees indicated their vocational program was not a cooperative program. Three hundred eighty-three (36.3%) terminees indicated they were not working in an area related to their cooperative work; therefore, they did not complete this item on the questionnaire.

[B]Persons who had not had a job since leaving their vocational program, including those in military service and those attending school, were asked not to respond to questions from which data was drawn. Returns were received from 1,981 terminees.

Basic Employment Information

The following section of this report offers information relative to employment and job characteristics of the 1973-74 secondary Business and Office Education terminees.

Table 19 illustrates the number of full-time jobs the responding 1973-74 Business and Office Education terminees have had since leaving their high school vocational course.

TABLE 19

NUMBER OF FULL-TIME JOBS HELD BY THE 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES SINCE LEAVING THEIR HIGH SCHOOL VOCATIONAL COURSE

Number of Full-Time Jobs Held	Number	Percent
One	822	41.5
Two	164	8.3
Three	25	1.3
Four	1	0.1
Five or more	2	0.1
TOTAL	1014	51.3

[A]Percentage is based on the 1,981 terminees who returned the questionnaire.

There were 822 (41.5%) of the total 1,981 responding 1973-74 Business and Office Education terminees who had been employed in just one job since leaving their high school vocational program. One hundred sixty-four (8.3%) of the terminees reported having two jobs since leaving their high school vocational course seven to eight months ago, while only 28 (1.5%) reported three or more jobs.

Table 20 reveals the first-job employment status of the Business and Office Education terminees who returned the survey by the relatedness of their vocational training to their first job.

Of the 1,981 responding 1973-74 Business and Office Education terminees, 838 (42.3%) were employed full time in their first job after leaving their high school vocational program. Two hundred eighty-one (14.2%) terminees' first jobs were on a part-time basis.

Of the 1,981 responding terminees' first jobs (full-time or part-time) 333 (16.8%) were in an area directly related to the training they received in their high school vocational course. While 432 (21.8%)

were employed in an area somewhat related, 354 (17.9%) were employed in a first job not related to the training they received. The terminees made the judgment as to how their first job was related to the training they received in their high school vocational program.

Of the 354 terminees who indicated their jobs were not related to their vocational course, 197 (55.6%) terminees indicated that before they accepted their unrelated job, they tried to get a job that was related to their vocational training. However, 157 (44.4%) of the terminees did not.

TABLE 20

FIRST-JOB EMPLOYMENT STATUS OF BUSINESS AND OFFICE EDUCATION TERMINEES (1973-74) BY RELATEDNESS OF VOCATIONAL TRAINING TO FIRST JOB[A]

First Job After Leaving High School Vocational Program	Total Reporting		Relatedness of Vocational Training to First Job[B]					
			Directly Related		Somewhat Related		Not Related	
	No.	%	No.	%	No.	%	No.	%
Full-Time	838	42.3	245	12.4	340	17.2	253	12.8
Part-Time	281	14.2	88	4.4	92	4.6	101	5.1
TOTAL	1119	56.5	333	16.8	432	21.8	354	17.9

[A]All percentages were based on the 1,981 (38.0%) of 5,209 terminees who returned the survey form.

[B]The terminees made the judgment as to how their first job was related to the training received in their high school vocational program.

[C]See page 31 for reasons terminees who were working in first job unrelated to this vocational training gave for not seeking job that was related before accepting their first job.

The following is a list of reasons given by the terminees who, before taking their first unrelated job indicated they did not seek a job that was related to their vocational training.

Reasons	Number
Already working	13
Changed my mind	10
Wasn't interested	9
Not enough training	8
None available	7
Only wanted part time	3
Not enough experience	3
Needed a job	2
Not enough money	2
No transportation	1

Table 21 shows by OE Code for the first job of the 1973-74 Business and Office Education terminees the relatedness of their training to this first job.

Of the 1,148 responding 1973-74 Business and Office Education terminees who indicated how their first job related to the training they received in their high school vocational program, 342 (29.8%) were employed in directly related areas. Four hundred thirty-nine (38.2%) were employed in somewhat related areas, while 367 (32.0%) terminees were employed in areas not related to their training. The terminees made the judgment as to how their first job was related to the training received in their high school vocational program.

More responding terminees who studied in Filing, Office Machines, and General Office, Clerical (OE Code 14.0300) indicated first job employment. This was to be expected since more terminees studied in this occupational objective area (See Table 1). Of the 461 employed 1973-74 terminees who studied in the occupational area of Filing, Office Machines, and General Office, Clerical and indicated relatedness

of training, 131 (28.4%) were employed in an area directly related to that training. One hundred seventy-four (37.8%) were employed in their first job in an area somewhat related to their training. However, 156 (33.8%) of these responding terminees indicated that their first job was not related to the training they received in their Business and Office Education program.

[A]OE Code areas as reported by teachers

[B]Area Vocational Centers

[C]Any terminee who left the program by completing or by high school graduation

[D]Any terminee who the instructor reported as having dropped out of school

[E]The terminees made the judgment as to how their first job was related to the training received in their high school vocational program.

Table 22 illustrates the current employment status of the responding terminees by the relatedness of their vocational training to their present

jobs. All percentages figured in the table were based on the 1,981 (38.0%) returns from the 4,209 Business and Office Education terminees.

Of the 1,981 responding 1973-74 secondary Business and Office Education terminees, 692 (34.9%) were presently employed full time and not attending school or employed full time and attending school. One hundred ninety-five (9.9%) of the terminees were employed part time and attending school, while 249 (12.6%) were unavailable for employment (See page 44 for reasons terminees were unavailable for employment). Only 283 (14.3%) of the terminees were unemployed and actively seeking employment, while 50 (2.5%) were employed part time and seeking full-time employment.

The "No Response" category in Table 22 included three groups: (1) terminees in active full-time military service; (2) terminees who were in school full time and had never had a job; and (3) terminees who failed to respond to the item on the questionnaire.

Of the 1,981 secondary Business and Office Education respondees, 290 (14.6%) were presently employed full time or part time in an area directly related to the training received in their high school vocational course. Three hundred eighty-one (19.2%) were employed either part time or full time in an area somewhat related to their training, while 269 (13.6%) were employed in areas not related to training. The terminees made the judgment as to how their present employment was related to the training received in their high school vocational course.

Of the 316 terminees who indicated their present jobs were not related to their vocational course, 179 (56.6%) terminees indicated that before they accepted their unrelated job, they tried to get a job that was related to their vocational training. However, 130 (41.1%) of the terminees did not.

TABLE 22

CURRENT EMPLOYMENT STATUS OF BUSINESS AND OFFICE EDUCATION TERMINEES (1973-74) BY RELATEDNESS OF TRAINING TO PRESENT JOB[A]

Employment Status	Total Respond-ing		Relatedness of Training to Present Job[E]							
			Directly Related		Somewhat Related		Not Related[E]		Employed No Response

Unemployed (actively seeking a job)[C]	283	14.3	N/A		N/A		N/A		N/A	
Unavailable for employment[C&D]	249	12.6	N/A		N/A		N/A		N/A	
No Response	486	24.5	N/A		N/A		N/A		N/A	
TOTAL	1981	100.0	290	14.6	381	19.2	269	13.6	23	1.2

[A]All percentages were based on the 1,981 (38.0%) respondents of the total 5,209 terminees. Terminees in active full-time military service or attending school full-time and had never been employed were included in the "No Response" category.

[B]The terminees made the judgment as to how their present job was related to the training received in their high school vocational program.

[C]The unemployed and unavailable for employment categories do not include persons in the military service and persons who were in school full time and never had a job.

[D]See page 44 for the listing of reasons Business and Office Education terminees gave for being unavailable for employment.

[E]See page 44 for reasons terminees who were working in present job not related to vocational training gave for not seeking related job before accepting present job. Totals for unrelated columns may not correspond because terminees failed to respond to one of the two questions from which data was drawn.

Below is a list of the reasons given by the terminees for being unavailable for employment.

Reason	Number
In school full time	113
Homemaker	84
Pregnancy	40
Not interested in a job	20
No openings	13
Working part time	6
Joining armed services	3
Illness or disability	3
Moving	2
Personal	2
Not enough training	1
No transportation	1

The following is a list of reasons given by the terminees who, before taking their present unrelated job, indicated they did not seek a job that was related to their vocational training.

Reasons	Number
Already had job	27
Not interested	27
Not enough training	20
Changed my mind	19
In school	11
No openings	8
Not enough salary	6
Working part time	4
Personal	4
Not enough experience	3
No transportation	1
Joining army	1

Table 23 shows for the present job, by OE code, the number of 1973-74 secondary Business and Office Education terminees employed by the relatedness of their vocational training to their present job.

Of the 1,059 secondary Business and Office Education terminees who indicated present employment, 424 (40.0%) who studied in the area of

Filing, Office Machines and General Office Clerical, OE Code 14.0300, were employed. This represented the largest number of employed terminees that studied in any OE Code area.

Of the 424 terminees presently employed that studied in OE Code 14.0300, 115 (27.1%) were employed in an area directly related to the training received in their high school vocational program. One hundred forty-three (33.7%) terminees who studied in OE Code 14.0300 indicated their present job was not related to their high school vocational training. The terminees made the judgment as to how their present job related to the training received in their high school vocational program.

[A]All percentages were based on the 1,981 (38.0%) of the 5,209 terminees who returned the questionnarie.

[B]Terminees made the judgment as to how their first job was related to training received in their high school vocational program.

Table 23A is a description of 1973-74 Business and Office Education terminees' present job by OE code area studied, number of returns, type school, termination status, and relatedness of training.

[A]OE Code areas as reported by teachers.

[B]Area Vocational Centers.

[C]Any terminee who left the program by completing or by high school graduation.

[D]Any terminee who the instructor reported as having dropped out of school.

[E]The terminees made the judgment as to how their first job was related to the training received in their high school vocational program.

Table 24 indicates the first job salary ranges as compared to the present job salary ranges for the 1973-74 Business and Office Education terminees.

TABLE 24

FIRST-JOB SALARY RANGES AND PRESENT-JOB SALARY RANGES FOR 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES

Salary Ranges	First Job		Present Job	
	No.	%	No.	%
Under $250	557	51.6	289	34.2
$250 - $299	149	13.8	114	13.5
$300 - $349	167	15.5	136	16.1
$350 - $399	113	10.5	121	14.3
$400 - $449	52	4.8	112	13.3
$450 - $499	24	2.2	41	4.9
$500 - $599	11	1.0	19	2.2
$600 - $699	3	0.3	5	0.6
$700 or more	3	0.3	8	0.9
TOTAL	1079	100.0	845	100.0

Of the 1,079 terminees reporting a salary range for their first job, 557 (51.6%) indicated a range of under $250 per month. Only six terminees reported a first salary of over $600 per month. The median salary range for the first job fell in the range of under $250 per month. The mean salary range for the first job fell in the range of from $250 - $299 per month.

Of the 845 1973-74 Business and Office Education terminees reporting a salary range for their present job, 289 (34.2%) indicated under $250 per month. This salary range was indicative of the mode of the reporting students. The median and mean salary ranges for the present job fell within the range of $250 - $299 per month. The median salary range of

present jobs was higher for present jobs than first jobs for the reporting Business and Office Education terminees.

Table 24A indicates the first-job salary ranges by relatedness of training and sex of the Business and Office Education terminees.

TABLE 24A

FIRST-JOB SALARY RANGES BY RELATEDNESS OF TRAINING OF 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES BY SEX

Salary Ranges	Sex of Terminees Responding		Relatedness of Training to First Job[B]					
			Directly Related		Somewhat Related		Not Related	
	Male	Female	Male	Female	Male	Female	Male	Female
Under $250	30	495	2	148	8	168	20	179
$250 - $299	10	126	2	35	2	50	6	41

$450 - $499	5	18	0	8	3	5	2	5
$500 - $599	5	5	0	3	2	1	3	1
$600 - $699	3	0	0	0	2	0	1	0
$700 or more	1	2	0	0	0	0	1	2
TOTAL[A]	80	929	12	296	24	349	44	284

[A]Totals do not match those of Table 24 because some terminees did not respond to all questions.

[B]The terminees made the judgment as to how their first job was related to the training received in their high school vocational program.

Five hundred twenty-five (52.0%) of the 1,009 responding terminees were employed at less than $250 per month. Of these 525 terminees, two (0.4%) males and 148 (28.2%) females were employed in a job directly related to their training, eight (1.5%) males and 168 (32.0%) females were employed in jobs somewhat related to their training, while 20 (3.8%) males and 179 (34.1%) females were employed in jobs not related to their training.

Of the 1,009 responding terminees, 80 (7.9%) were males and 929 (92.1%) were females. Twelve (1.2%) males and 296 (29.3%) females were employed in jobs directly related to their vocational training, 24 (2.4%) males and 349 (34.6%) females were employed in jobs somewhat related to their training, while 44 (4.4%) males and 284 (28.1%) females were employed in jobs not related to their training.

Table 24B indicates the present-job salary ranges by relatedness of training and sex of the Business and Office Education terminees.

TABLE 24B

PRESENT-JOB SALARY RANGES BY RELATEDNESS OF TRAINING OF 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES BY SEX

Salary Ranges	Sex of Terminees Responding		Relatedness of Training to Present Job[B]					
			Directly Related		Somewhat Related		Not Related	
	Male	Female	Male	Female	Male	Female	Male	Female
Under $250	23	256	3	74	4	94	16	88
$250 - $299	6	106	1	30	1	41	4	35
$300 - $349	6	123	1	38	1	50	4	35
$350 - $399	7	112	3	41	3	55	1	16
$400 - $449	12	98	2	35	4	54	6	9
$450 - $499	3	38	1	15	2	20	0	3
$500 - $599	6	12	1	3	2	7	3	2
$600 - $699	2	3	0	1	1	1	1	1
$700 or more	5	2	2	1	3	0	0	1
TOTAL[A]	70	750	14	238	21	322	35	190

[A]Totals do not match those of Table 24 because some terminees did not respond to all questions.

[B]The terminees made the judgment as to how their present job was related to the training received in their high school vocational program.

Two hundred seventy-nine (34.0%) of the 820 responding terminees were employed at less than $250 per month. Of these 279 terminees, three (1.1%)

males and 74 (26.5%) females were employed in a job directly related to their training, four (1.4%) males and 94 (33.7%) females were employed in jobs somewhat related to their training, while 16 (5.7%) males and 88 (31.6%) females were employed in jobs not related to their training.

Of the 820 responding terminees, 70 (8.5%) were males and 750 (91.5%) were females. Fourteen (1.7%) males and 238 (29.0%) females were employed in jobs directly related to their vocational training, 21 (2.5%) males and 322 (39.3%) females were employed in jobs somewhat related to their training, while 35 (4.3%) males and 190 (23.2%) females were employed in jobs not related to their training.

Continuing Education Information

The following section of this report presents information relative to the continuing education of the 1973-74 secondary Business and Office Education terminees.

Table 25 shows the vocational educational training opportunities terminees have participated in since leaving their high school vocational program.

Of the total terminees, the 239 (12.1%) who were enrolled in Junior Colleges represented the largest area where terminees had taken additional vocational training.

Of the 1,981 responding terminees, 827 (41.7%) had taken part in one additional vocational training program since leaving their high school program. Seventy-two (3.6%) enrolled in two training programs, and 21 (1.1%) terminees had enrolled in three vocational training programs.

One thousand one hundred twelve (56.1%) indicated they had not enrolled in any additional vocational training.

TABLE 25

ADDITIONAL VOCATIONAL EDUCATIONAL TRAINING 1973-74
SECONDARY BUSINESS AND OFFICE EDUCATION
TERMINEES PARTICIPATED IN SINCE
LEAVING THEIR HIGH SCHOOL
VOCATIONAL PROGRAM[A]

Type Training	Number	Percent[B]
On-the-job training (employer-sponsored program)	236	11.9
Public school adult vocational program	23	1.2
Private vocational school program	18	0.9
University or four year college	192	9.7
Junior college	239	12.1
Post-secondary vocational-technical institute (Trade School)	96	4.8
Apprenticeship training program	8	0.4
Specialized occupational military training	9	0.4
Other[C]	99	5.0
TOTAL[D]	920	46.4

[A]One thousand one hundred twelve (56.1%) of the 1,981 terminees gave no indication of being involved in additional vocational training. Of the 1,981 terminees, 827 (41.7%) took part in one additional vocational training opportunity since leaving their high school program. Seventy-two (3.6%) took part in two and 21 (1.1%) terminees took part in three additional training opportunities.

[B]Percentages are based on the 1,981 (38.0%) respondents of the total 5,209 terminees who returned questionnaires.

[C]See page 58 for the "Other" listing as specified by the terminees.

[D]The total indicated the number of different training programs in which terminees enrolled. As footnoted above, several terminees had enrolled in more than one training program.

The following is a listing of the "Other" (Table 25) vocational education training terminees indicated they had participated in:

"Other" Vocational Training	Number
Business school	46
Part-time job	11
Technical school	10
College	7
High school	5
Licensed Practical Nurse	4
Sales	4
N.Y.C.	4
Volunteer work	3
Child care	2
Jewelry repair	1
G.E.D.	1
Sewing	1
Hotel management	1
Optical mechanics	1
Wood work	1
Rehabilitation	1

Table 26 points out the additional programs the 1973-74 secondary Business and Office Education terminees were presently attending beyond their high school training by whether these programs were related to their high school vocational program.

Of the 1,981 1973-74 secondary Business and Office Education terminees who responded to the survey, 82 (4.1%) were attending an on-the-job training program (employer-sponsored), 80 (4.0%) were attending a vocational technical institute, 301 (15.2%) were attending a junior college, 272 (13.7%) were attending a four year college or university, 13 (0.7%) were attending a public adult vocational program, 43 (2.2%) were attending private business or trade school, three (0.2%) were attending an apprenticeship program, and 71 (3.6%) were attending some other type of school or educational program. (See page 60 for the listing of the other types of schools or educational programs students were attending.)

Eight hundred sixty-five (43.7%) of the 1,981 Business and Office Education terminees were presently continuing their education. Three

hundred thirty-eight (17.1%) of the terminees were continuing their education in a program related to their high school vocational program. Four hundred four (20.4%) were attending a program in an area not related to their high school vocational program.

TABLE 26

PROGRAMS PRESENTLY ATTENDED BY THE 1973-74 SECONDARY BUSINESS AND OFFICE EDUCATION TERMINEES BY WHETHER THESE PROGRAMS WERE RELATED TO THEIR HIGH SCHOOL VOCATIONAL EDUCATION PROGRAM[A]

Programs Attended	Terminees		Program Related to High School VED Program					
			Yes		No		No Response	
	No.	%	No.	%	No.	%	No.	%
On-the-job training (employer-sponsored)	82	4.1	14	0.7	7	0.4	61	3.1
Vocational-technical institute (Trade School)	80	4.0	46	2.3	29	1.5	5	0.2
Junior college	301	15.2	119	6.0	165	8.3	17	0.8
Four year college or university	272	13.7	82	4.1	171	8.6	19	1.0
Public school adult vocational program	13	0.7	9	0.5	3	0.1	1	0.1
Private business or trade school	43	2.2	31	1.6	8	0.4	4	0.2
Apprenticeship Program	3	0.2	1	0.1	0	0.0	2	0.1
Other[B]	71	3.6	36	1.8	21	1.1	14	0.7
TOTAL	865	43.7	338	17.1	404	20.4	123	6.2

[A]All percentages were based on the 1,981 responding terminees.

[B]See page 60 for listing of "Other" schools or educational institutions terminees were attending.

The following is a listing of the "Other" category (Table 26) of additional programs the 1973-74 Business and Office Education terminees were attending:

"Other" School or Program	Number
Business school	33
High school	30
Nursing school	11
College	6
Working	4
Junior college	3
Trade school	2
Beauty Academy	1

Of the 1,981 responding terminees, 987 (49.8%) indicated they were not attending a school or program but would like to do so. The following is a list of the areas in which these terminees desired to study:

Area of Study	Number
Stenographic	189
Clerical	177
Accounting	158
Computer	114
Secretarial administration	50
Nursing	45
Not sure	45
Medical Secretary	26
Legal Secretary	23
Agribusiness related	21
Banking	10
Home Economics related	10
Electronics	9
Sales, advertising	9
Cosmetology	7
X-ray technician	7
Science	6
Psychology	5
English	5
Teaching	5
Physical Education	3
Real estate	3
Optometrist	2
Photography	2
Theater	2
Law enforcement	1

Seven hundred sixty-seven (38.7%) of the 1,981 responding terminees indicated they were not attending a school or program and did not desire to do so. Two hundred twenty-seven (11.5%) terminees did not respond to the question.

Table 27 illustrates the programs presently attended by the terminees by OE Code area studied by whether it related to their high school vocational program. No attempt was made to show the no responses to the data items; therefore, many of the totals do not correspond.

TABLE 27

[A]Since some terminees did not respond to parts of the questions, totals will not correspond.

Job Placement Information

The following section of this report presents information concerning job placement of the 1973-74 secondary Business and Office Education terminees.

Table 28 points out whether the 1973-74 Business and Office Education terminees were seeking full-time employment when they left their high school vocational program and if their vocational teacher attempted to help them get a job.

TABLE 28

WHETHER VOCATIONAL TEACHER ATTEMPTED TO HELP 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES GET A JOB IF SEEKING FULL-TIME EMPLOYMENT UPON LEAVING THE HIGH SCHOOL VOCATIONAL PROGRAM[A]

Vocational Teacher Attempted To Get Terminee A Job	Number	Percent
Yes	427	43.9
No	546	56.1
TOTAL	973	100.0

[A]Nine hundred fifty-three (48.1%) of the responding terminees indicated they were not seeking full-time employment when they left their high school vocational program. Twenty-four (1.2%) of the terminees did not respond to the question.

Of the 973 responding 1973-74 Business and Office Education terminees indicating they were seeking full-time employment when they left their high school vocational program, 427 (43.9%) indicated that their vocational teacher attempted to help them get a job. However, 546 (56.1%) of the terminees seeking full-time employment indicated that their

vocational teacher did not attempt to help them secure employment. It was interesting to note that 953 (48.1%) of the reporting 1973-74 Business and Office Education terminees indicated that they were not seeking full-time employment when they left their high school vocational program.

Table 29 illustrates how long it took the 1973-74 Business and Office Education terminees to get their first full-time job after they left their high school vocational program and began actively seeking full-time employment.

TABLE 29

LENGTH OF TIME IT TOOK THE 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES TO SECURE FIRST FULL-TIME JOB AFTER LEAVING HIGH SCHOOL VOCATIONAL PROGRAM AND BEGINNING ACTIVELY SEEKING FULL-TIME EMPLOYMENT[A]

Time to Secure First Full-Time Job	Number	Percent
0 - 2 weeks	245	35.4
3 - 4 weeks	142	20.5
5 - 8 weeks	99	14.3
9 - 12 weeks	91	13.1
13 or more weeks	116	16.7
TOTAL	693	100.0

[A]Four hundred seven terminees indicated they already had a job when they left their high school vocational program.

Two hundred forty-five (35.4%) of the 693 secondary Business and Office Education terminees secured their first full-time job within two weeks after they left their high school vocational program and began actively seeking full-time employment. However, 116 (16.7%) of the

terminees took 13 or more weeks to secure their first full-time job. There were 407 terminees who indicated they already had a job when they left their high school vocational program.

Table 30 shows how the 1973-74 secondary Business and Office Education terminees indicated they got their first full-time job after leaving their high school vocational program.

TABLE 30

HOW THE 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES INDICATED THEY GOT THEIR FIRST FULL-TIME JOB AFTER LEAVING THEIR HIGH SCHOOL VOCATIONAL PROGRAM

How terminees Secured First Full-Time Job	Number	Percent
Through your vocational teacher	66	8.5
Through your counselor	7	0.9
Through other school teachers or administrators	20	2.6
Through a friend or relative	274	35.4
Through applications to business of industry	195	25.2
Through state (local) employment office	73	9.4
Through a private employment agency	24	3.1
Through radio, T.V., newspaper, or other news media	29	3.8
Other[A]	86	11.1
TOTAL	774	100.0

[A]See listing on page 67 for the "Other" ways terminees indicated they secured their first full-time job after leaving their high school vocational program.

Of the 774 1973-74 Business and Office Education terminees who responded to the survey item, 195 (25.2%) indicated they got their first full-time job after leaving their high school vocational program through applications to business and industry. Two hundred seventy-four (35.4%) of the terminees also indicated they got their first full-time job through

a friend or relative. These represented the two methods that the largest number of Business and Office Education terminees utilized to secure their first full-time job. Only 66 (8.5%) of the terminees indicated they secured their first job through their vocational teacher. Seven (0.9%) indicated that a counselor got them their first full-time job after leaving their vocational program. Those students who already had a job before leaving their high school vocational program were not shown in Table 30. (See Table 31, page 68)

Some of the 86 terminees who checked the "Other" category specified the means by how they secured their first full-time job after leaving their high school vocational program. The following list indicates the "Other" means the terminees indicated.

"Other" Means for Securing First Full-Time Job	Number
Civil Service	21
Myself	17
Part time; became full time	14
Not working full time	12
Friend, relative	9
School	6
Employment office	4
Employer	4
Neighborhood Youth Corps	2

Table 31 shows how the 1973-74 Business and Office Education terminees who were working while in high school taking their vocational program indicated they got that job.

Seven hundred ninety-seven (40.2%) of the 1,981 reporting 1973-74 Business and Office Education terminees indicated they were working during the time they were in high school taking their vocational program. Of those terminees working while in high school, 446 (56.0%) got their job through their vocational instructor, 197 (24.7%) through a friend

or relative, and 58 (7.3%) got jobs through applications to business and industry. These three means were the ways most of the terminees secured a job while they were still in high school taking their vocational program.

TABLE 31

HOW THE 1973-74 BUSINESS AND OFFICE EDUCATION TERMINEES WHO WERE WORKING WHILE IN HIGH SCHOOL TAKING THEIR VOCATIONAL PROGRAM INDICATED THEY GOT THAT JOB[A]

Who or What Helped Terminee Get Job	Number	Percent
Your vocational teacher	446	56.0
Your counselor	19	2.4
Other school teachers or administrators	17	2.1
